- Forte concentration de bétail
- Frontière Internationale
- Lac Tchad

50 Km

## Analysis

UNOSAT Surveyed 800 sq km on March 8-12-13 and 24. Findings suggest the following analysis

- ① 08/03/2015: No obvious large IDP/refugee settlements have been identified. Only few located scattered temporary shelters as well as livestock may possibly be indicated
- ② 12-13/03/2015: A few scattered temporary shelters have been detected and higher presence of livestock all around. An area with a higher concentration of possible shelters is identified. the closest thing we have found to an IDP settlement. Coordinates are Lat: 13.298°, Long: 13.933°.
- ③ 24/03/2015: Only scattered possible shelters have been identified but not big concentrations of them. In many cases shelters seen do not seem to be those of displaced people they are few in numbers quite scattered.
