

# Refugee Reproductive Health: Family Planning

Contraceptive Prevalence Rate by Country

## Strategies for developing family planning programs in refugee settings:

1. Fostering male involvement in reproductive health services
2. Ensuring availability of contraceptive commodities
3. Providing a broad range of method options
4. Offering confidential counseling and individual education
5. Leading community-based activities and social mobilization
6. Dispelling common myths about side effects
7. Involving religious and community leaders
8. Integrating family planning with other RH services
9. Targeting youth with tailored programs
10. Reframing family planning for spacing or limiting as appropriate

# Family Planning Method Use in Selected Refugee Operations
