

UNHCR Well Cleaning and Chlorination Log Sheet

Well Location:	Well GPS Location:	
Name of Well Caretaker:	Date of Visit:	
WELL STATISTICS		
Depth to Water Surface (m):	Calculated Water Volume (m ³):	
Total Well Depth (m):	Operational Hours per Day (hours):	
Water Column (m):	Time Taken to Rechar	
Internal Diameter of Well (cm):		
NATURE OF CONTAMINATION		
Reported / Suspected:		
Observed:		
FIELD WATER QUALITY TEST RESULTS		
Turbidity (NTU):	TDS (mg/l):	
pH:	Conductivity (µS):	
Temperature (°C):	Nitrates (mg/l):	
FAECAL CONTAMINATION TEST RESULTS		
Samples Taken Yes / No	Sample Numbers	Result (Ecoli/100ml)
Before Cleaning		
After Cleaning		
After Chlorination		
CHLORINATION RECORD		
Chlorination Carried Out By:	Date:	
Chlorine Dosage (mg/l):		
Strength of Chlorine Solution (%):		
Free Chlorine Test Result (mg/l):		
GENERAL COMMENTS (cleaning activities un	dertaken, well condition, popul	ation served, protection etc.)
Notes		
1. The depth of the water column can be calculated by taking the depth to t 2. The calculated water volume can be calculated by multiplying the area (μ	bi x radius ²) by the water column.	
1. The depth of the water column can be calculated by taking the depth to t	oi x radius ²) by the water column. not possible, a Jackson Tube.	

10. Completed forms should be returned to the Programme's Water Officer for filing and reporting purposes.

^{7.} The Nitrates reading need only be measured in areas close to intensive agriculture (crop production) and should be measured with a Hach Kit (program 51).

^{8.} The Free Chlorine Residual should be measured using a 'Pool Tester' found in the DelAgua Kit.

^{9.} The Free Chlorine residual at the tapstand should be in the range 0.2 - 0.5 mg/litre (after a contact time of at least 30 minutes).
