

Primary Data Collection

TIME Training
September 1-5, 2014

In this session

- **Sources of primary data**
- **Practical ways to integrate participatory approaches and AGD**
- **Assessment site selection**
- **Designing primary data collection tools**
- **Analysis and reporting**

Primary Data Collection Planning

- *What?*
- *How?*
- *Where?*

Primary Data Sources

Direct Observation

Key Informant Interviews

Focus Group Discussions

What are some of the strengths and weaknesses of each method

Integrating Participatory Approaches and AGD

- Stratify focus group discussions according to AGD principles (i.e. have separate discussions for men, women, boys, girls, minorities, the disabled, etc.);
- Hold focus group discussions or key informant interviews with different segments of a population simultaneously (e.g. men's and women's focus group discussions)
- Assess questions and themes that might be relevant to marginalized or less vocal segments of communities.
- Partner with specialized NGOs who work with hard-to-reach groups (such as NGOs that specialize in assistance for elderly persons, disabled persons, children, etc.).
- Conduct a participatory ranking of problems and proposed solutions, during which community members carry out the prioritization.

Importance of Good Design

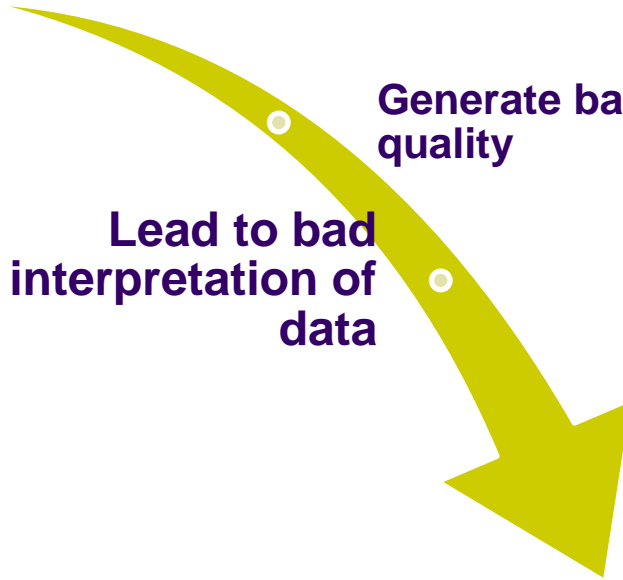

Poorly designed forms can....

Lead to
misunderstanding
of questions

Generate bad data
quality

Lead to bad
interpretation of
data

Lead to wrong
operational
decisions

Data Collection Tools: Design Considerations

- **Prioritized Information Needs and Analysis Plan**
- **Unit of measurement**
- **Data collection methodology: direct observation, focus group, key informant interview**
- **Specialized/non-specialized enumerators**
- **Language**
- **Length, time to complete**
- **Data Sensitivity**

Investigation Form template

Description Module

Date	Name and sex of assessor /assessment team
Province	District
Sub-District	Place name
Settlement type	Setting type
Population type	GPS coordinates X: _____ Y: _____

Generalist Key Informant Module³⁵

Opening and area-specific questions

1 Is there a serious problem in your community³⁶ because people do not have enough water that is safe for drinking or cooking?

Yes No DKN

What are the main sources of water in your community (tick all that apply)?

Borehole or well with functioning motor pump	<input type="checkbox"/>
Borehole or well with functioning hand pump	<input type="checkbox"/>
Protected spring	<input type="checkbox"/>
Protected open well	<input type="checkbox"/>
Piped water	<input type="checkbox"/>
Unprotected spring	<input type="checkbox"/>
Unprotected open well	<input type="checkbox"/>
Surface water	<input type="checkbox"/>
Traditional water sellers	<input type="checkbox"/>
Humanitarian assistance	<input type="checkbox"/>
None	<input type="checkbox"/>

2 Is there a serious problem in your community with food; for example because there is no food or not good enough food or because it is not possible to cook food?

Yes No DKN

2a. What are the main concerns related to food in your community (rank up to 3 concerns)?

No food, no market	<input type="checkbox"/>
Not enough food	<input type="checkbox"/>
Not good enough food	<input type="checkbox"/>

Best Practices in Structuring Assessment Questionnaires

- Collect only what you need
- Do **not** mix units of measurement
- Avoid biased or leading questions;
- Minimize vague/undefined responses
 - avoid: always, sometimes, usually, seldom, etc.
 - better: 7 days per week, 5-6 days per week, 3-4 days per week,
- Minimize free text in large assessments -- hard to analyze quickly and compare
- Consider the need for gender/age disaggregation throughout
- Test, test, test and test again

Developing a Data Collection Tool

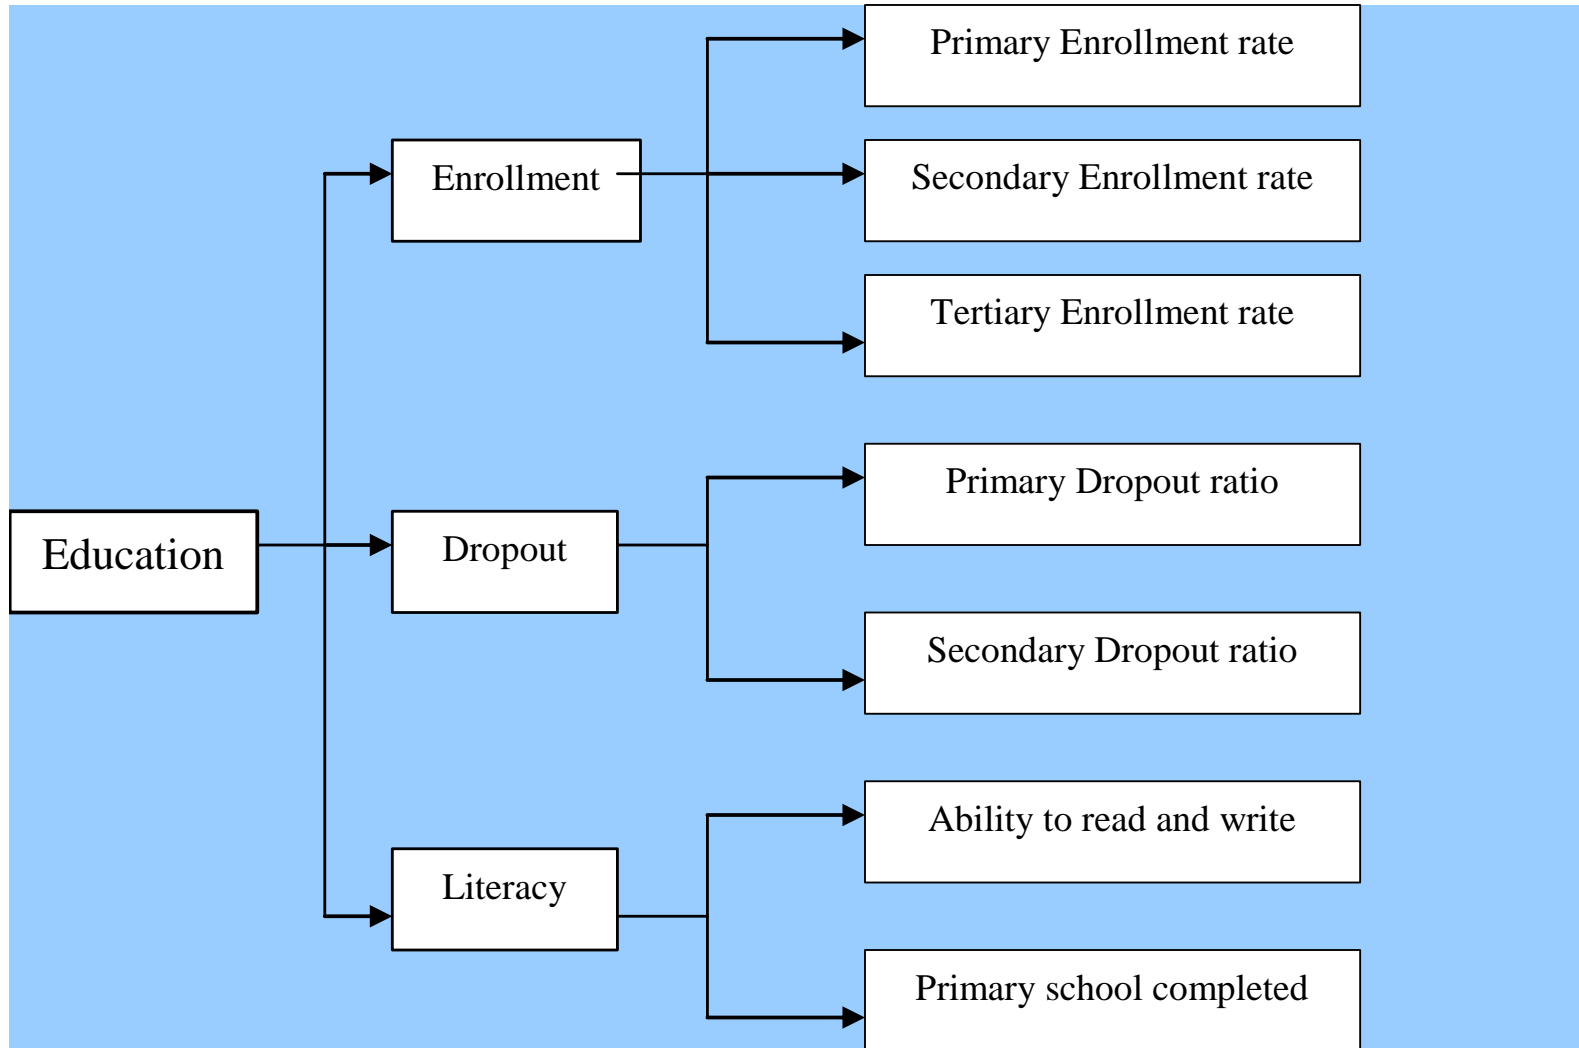

“The first step in drafting a question is not drafting a question!”

Tarek Abou Chabake, FICSS

Step 1: Building an assessment “architecture”

Sample Architecture – Education

Step 2 – Turning indicators into questions

Break-down into different steps

- Indicator** → **Variable(s):** Review the indicator; identify the metric(s) which should be measured.
- Variable(s)** → **Questions:** Ask yourself what question(s) will enable you to gather data on that indicator.
- Questions** → **Modalities:** How can you present that question most effectively in an assessment?
- Modalities** → **Method:** How will your assessment team deliver that question in the field?
What data collection technique will your team use?

(Source: ACAPS 2012)

Table 5: From indicator to questions – Example 1

Indicator	Variable	Questions	Modalities	Method
% of the affected population with a living area of less than 3.5 m ² per person, disaggregated by a) Non-displaced population; b) Displaced population.	IDPs with less than 3.5m ² /p.	Have you been displaced by the recent conflict?	Multiple choice / 1 answer. <ul style="list-style-type: none"> • Old IDP • New IDP • Resident 	Household face-to-face interview.
	Non-IDPs with less than 3.5m ² /p.	How many are you living in this room?	Multiple choice / 1 answer: <ul style="list-style-type: none"> • < 3.5m²/p • 3.5m²/p > X < 7m²/p • > 7m²/p 	

(Source: ACAPS 2012)

Site Selection

**How do we pick
which sites should
be assessed?**

Sampling

Non-Probability
Convenience
Purposive

Statistician Required

Probability
Random
Stratified
Cluster

Factors to Consider in Site Selection for Purposive Samples in Community Level Assessment

- **Diversity-driven**
 - **Displacement status**
 - **Type of geography**
 - **Urban / Rural**
 - **Social grouping**
 - **Displacement date**
 - **...and many other things**
- **Scale of displacement**
- **Knowledge gaps**

Site Selection for Purposive Samples in Community Level Assessment - Stratification

		Province A Cyclone completely flooded it	Province B Rural province with some flooded areas, some not	Province C Not flooded area of refuge, with both cities and rural areas
Flooded	Urban	+	×	×
	Rural	+	+	×
Non-Flooded	Urban	×	×	+
	Rural	×	+	+

Purposive sampling is not representative and the results cannot be generalized.

Describing Results from a Purposive Sample

The following terms may be useful to describe and interpret information from purposive samples:

Likely...

...indicates that...

...suggests that...

...Is consistent with....

...were surprised to find...

It appears....

What we observed is consistent with...

it was... ah, words
can't describe!

Analysis

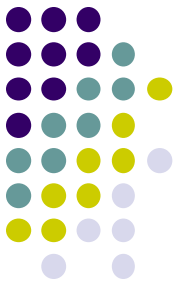

Analysis –

- what we do to make sense of data/information,
- understanding what the data says
- Identifying patterns, trends and relationships

Common Types of Analysis

- Spatial analysis (GIS)
- Statistical analysis
- Vulnerability analysis
- Situation analysis
- Risk analysis

Reporting and Dissemination

- Privacy and data security concerns
- Know the audience
- Consider multiple formats
- Use visuals to *enhance* – more are not necessarily better
- Use multiple platforms – online *and* offline

Prioritizing

NEEDS ASSESSMENT SCOPE

PRIORITIZATION GRAPH FOR DATA COLLECTION IN EMERGENCIES
