Key Recommendations for Protection in Cash-based Interventions

Throughout the Program Cycle:

- Use a participatory approach and/or support community-led processes.
- Look within and beyond the household unit: disaggregate information or include samples of individuals using an age, gender and diversity lens.
- Establish an accountability framework for multi-channel feedback throughout the phases.

	3
Desk Review and Needs Assessment	 Gather situational protection information on the major risks for the affected population (what and for whom), sources of risks, and any community-based or self-protection mitigation mechanisms. This information could come from e.g. protection needs assessments, case management, feedback mechanisms. Flag any information on economic or livelihoods-related root causes of protection risks.
Risk, Vulnerability and Capacity Analysis	 Create a context-specific protection risk and benefit analysis. Analyse relative importance (likelihood and impact) and manageability (prevention or mitigation) for different groups and individuals. Discuss the differences and overlaps between specific needs, protection risks, and economic vulnerability.
Eligibility Criteria and Targeting	 Identify and assess people with specific needs or protection risks, and refer them to other assistance if CBI is not relevant for them. Build in the flexibility to accept ongoing protection referrals, beyond the initial assessment and targeting. Use a combination of targeting methods (e.g. community-based, administrative) to improve access and inclusion.
Market Analysis	 Analyse access to goods and services with an AGD lens. Compare this information with protection needs assessments. Analyse market systems related to protection, e.g. alternative care, health, legal services, transport, education, birth registration. Analyse the potential protection risks and benefits of market interactions in the community and among traders.
Modality and Delivery Mechanism	 Ensure that modality and delivery mechanism selection reflects identified protection risks and benefits. Consider alternative delivery mechanisms for certain individuals or groups as necessary. If no safe, feasible delivery mechanisms exist for CBI, consider in-kind assistance, and vice versa.
Design and Implementation	 Ensure that programme design mitigates potential risks identified in assessments. Design and adjust the frequency and amount of transfers to address the economic drivers of vulnerability, and according to beneficiary preferences. Include data protection, confidentiality and opt-out clauses in service agreements and SOPs.
Monitoring	 Build a monitoring system and an accountability framework on the basis of identified protection risks and benefits. Examine how CBI may mitigate protection risks and maximize protection benefits. Consider any changes in protection risks and benefits, specific needs, vulnerability and capacity to cope, and re-consider programme design as appropriate.
