I. INTRODUCTION

This report provides an overview of statistics on refugees and other persons of concern to UNHCR at the end of 1995. The statistical information presented was provided, in the main, by Governments, and is thus mostly based on their own records and methods of estimation. The data were collected through UNHCR's annual statistical survey. These statistics do not include refugees who come under the mandate of the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA).

Where possible, a comparison has been made with the end-1994 statistics. The greater part of the reduction in the number of refugees (from 14.5 million to 13.2 million, see Table 1) is the result of repatriation. However, some 300,000 of the reduction reflects the net effect of changes in categorization between "Refugees" and "Others of concern". The increase in Others of concern is further explained by the inclusion of some one million asylum-seekers for the first time.

II. POPULATIONS OF CONCERN TO UNHCR

The statistical tables contained in this report use the following categories of persons who can be considered of concern to the Office:

1. Refugees.

These are persons recognized to be outside their country of nationality or habitual residence (henceforth "of origin") for reasons that make them of direct concern to UNHCR. They include:

(a) persons recognized as refugees by Governments having ratified the 1951 United Nations Convention Relating to the Status of Refugees, and/or its 1967 Protocol;

(b) persons recognized as refugees under the 1969 Organization of African Unity

(OAU) Convention governing the specific aspects of refugee problems in Africa and those recognized in accordance with the principles enshrined in the Cartagena Declaration;

(c) persons recognized by UNHCR as refugees in accordance with its Statute (otherwise referred to as "mandate" refugees);

(d) persons, particularly in Europe, who have been granted temporary protection on a group basis.

2. Returnees.

Persons who were of concern to UNHCR when outside their country of origin and who remain so for a limited period after their return. Consequently, they will usually be in the statistics for a limited period only;

3. Others.

This category includes asylum-seekers as well as others who are in a refugee-like situation, that is, those who are outside their country of origin, but who have not been formally recognized as refugees. It also covers those who have been granted a humanitarian (i.e. non-Convention) status in Europe and North America. In addition, this category covers UNHCR-assisted victims of armed conflict in the former Yugoslavia, as well as various groups of concern in the Commonwealth of Independent States (CIS). Rejected asylum-seekers in South-East Asia who are assisted by UNHCR are also contained in this category. Stateless persons in a refugee-like situation have generally been counted under this category.

4. Internally displaced.

This group refers to persons displaced internally within their country for reasons that would make them of concern to UNHCR if they were outside their country of origin, and who have become of concern to UNHCR as a result of a request from the Secretary-General or the competent principal organs of the United Nations. In addition, IDPs may become of concern to UNHCR because of their proximity to assisted refugee and/or returnee populations.

While the above distinctions serve to identify the various populations at an aggregate level, it should be stressed that clear categorization is not always possible in practice.

In recent years, UNHCR's involvement with persons who have not crossed an international border, i.e. internally displaced, refugees who have returned home (returnees) and persons threatened with displacement by, or otherwise at risk from, armed conflict (e.g. in Bosnia and Herzegovina) has increased substantially. In view of the above, and taking into consideration the rise in the number of persons granted temporary protection and those allowed to stay on humanitarian grounds, it has become increasingly imprecise to talk about "refugees" without some further indication of the group concerned. In this report, the term "populations of concern to UNHCR" has been used to group these various categories.

III. THE CONCEPT OF ASSISTANCE

There is a strong relationship between UNHCR's population statistics and its assistance programmes. Indeed, one of the major reasons for UNHCR to report statistics is to indicate the size and major characteristics of the beneficiary population of assistance programmes. Often, the assistance is provided through governmental and non-governmental "implementing

partners".

Assistance is provided to those who cannot meet their own basic needs, and in the absence of other resources. There are five types of assistance:

- emergency assistance, which includes measures to meet basic needs, usually in case of a new refugee influx. The assistance does not normally exceed a period of twelve months;
- care and maintenance, which covers assistance once survival is no longer threatened. It involves meeting basic needs on a more routine basis, pending the identification of durable solutions (that is, voluntary repatriation, local settlement and resettlement). Assistance usually takes the form of providing food, water, household utensils, medical care, shelter, transportation, basic education, vocational training, etc;
- voluntary repatriation, which covers preparations for departure to the country of origin, transportation, etc. In most cases, it also involves activities in the country of origin, including organizing reception facilities and assistance during the initial phase of reintegration;
- local settlement assistance, which may be provided to refugees who cannot return home. It aims to promote their self-sufficiency and local integration;
- resettlement, which may be offered to refugees who are admitted temporarily to a country of asylum, who cannot return to their home country and who face particular protection problems. UNHCR facilitates permanent settlement in a third country through securing resettlement places, medical screening, arranging for travel, measures to facilitate the integration of the refugee in the country of resettlement, etc.

While it is relatively straightforward to count persons and families when they receive food and non-food items regularly, the number of beneficiaries is more difficult to define when the assistance is provided to the community (roads, schools, etc.).

IV. DATA CONSIDERATIONS

a. Quality

The quality of the data presented here varies greatly: while some are based on detailed registration systems recording all increases and decreases in the refugee population, others may be based on extrapolations based on health surveys, visual assessments or demographic surveys. In general, however, assisting refugees on a regular basis requires registration, usually at the individual or family level. While such beneficiary statistics are prone to inflation, as they are linked to entitlements, they are also subject to closer scrutiny, as they form the basis for the assistance programme. As a result, statistics derived from such systems are likely to reflect relatively well the "de facto" resident refugee population. Statistics on refugees who do not receive assistance may be based on the delivery of refugee identity cards or on demographic censuses. Statistics on groups which are not assisted are much less subject to updating and verification than statistics on assisted populations.

Assistance to returnees and internally displaced is often provided to groups, affecting the

quality of the beneficiary statistics. As a result, the figures on assisted returnees and internally displaced are usually of a lesser quality than those of (assisted) refugees. In addition, given the often short period during which assistance is provided to these groups, their numbers may fluctuate markedly from one year to the next.

b. Source and basis

In most countries, there is more than one source for statistics, complicating the compilation of statistics at the national level. Thus, in countries where assistance is provided, separate registration systems usually exist, with varying degrees of quality, for refugees in camps, in urban areas, those living among local populations, those who are not assisted, etc. In addition, the organization that is "de facto" responsible for registration, and thus the source of information, varies between and within countries, and may be the Government, UNHCR, NGOs or a combination of these. In more developed countries, spontaneously arriving asylum-seekers, resettled refugees and those granted temporary protection are often recorded separately, by different agencies and at different points in time.

V. SOME PRACTICAL PROBLEMS IN COUNTING REFUGEES

In addition to the factors mentioned above, counting refugees poses a challenge in the following situations:

- in emergency situations, it is often not possible to provide a reliable estimate, owing to the ongoing nature of the influx;
- in large-scale refugee situations, camp populations are often "fluid", i.e. they move in and out of camps, often without notifying UNHCR or local authorities. "Closed" camps, where the movement of residents is subject to control, are an exception;
- in countries where refugees do not require UNHCR assistance, changes in the refugee population such as births, deaths, naturalization, spontaneous departures, emigration and cessation of refugee status are usually not reported separately, or reported in part only. Particularly in the more developed countries, refugee population estimates, if available, are usually "theoretical" as they are often based on the total number of persons admitted as refugees since a certain date, often the date of accession to the international refugee protection instruments, not on a recent census or registration system;
- significant spontaneous returnee movements are taking place in various parts of the world that remain unrecorded by either Governments or by UNHCR. Consequently, it may be extremely difficult to account for the changes in refugee populations from one year to the other;
- as increases in the refugee population are generally better recorded than decreases, there is a tendency, both in more developed countries and in countries where refugees are assisted by UNHCR, towards over-estimation of refugee numbers;
- statistics can become quickly outdated as a result of sudden new arrivals or departures.

In an effort to address some of these deficiencies, UNHCR has continued to review and improve its own registration practices. With time, improved registration systems will make statistics on populations of concern to UNHCR, which are essential tools in targeting protection and assistance activities, more reliable.

VI. EXPLANATORY NOTES

a. General

The statistical information presented in Tables 1 to 11 is derived from UNHCR's end-year statistical survey.

The tables follow the regional classification of the Department for Economic and Social Information and Policy Analysis of the United Nations Secretariat which distinguishes six major regions: Africa, including North Africa; Asia, including the countries of the Middle East that are not located on the African continent, and Turkey; Europe; Latin America, including Central and South America and the Caribbean; North America, and Oceania, including, among others, Australia, Papua New Guinea and New Zealand. Table 2 presents data arranged by UNHCR Regional Bureaux.

Demographic characteristics are available for some four million UNHCR-assisted refugees. As a result, the totals by country of asylum in Table 10 differ from those for the total refugee population.

b. Country notes

Australia. The refugee population figure is a government estimate and takes into account decreases in the refugee population, including naturalization. Australia's humanitarian programme consists of three main elements. The Refugee category is for applicants who qualify for refugee status under the 1951 United Nations Convention and its 1967 Protocol, and who are being resettled. This also includes the Women-At-Risk programme. Under the Global Special Humanitarian programme, persons in "refugee-like" situations, often with links to Australia, are being resettled. Persons who do not qualify for the above programmes, but who are in a vulnerable situation within or outside their country of habitual residence may be admitted under the Special Assistance Category, in particular when they have substantial family or community support within Australia.

Burundi. The returnee population as at 31 December 1994 (some 360,000) included those who had returned to Burundi following the genocide in Rwanda in April 1994, whereas the returnee population as at 31 December 1995 includes those who repatriated during 1995 with UNHCR assistance.

Canada. The 1994 and 1995 population of concern to UNHCR is based on the cumulative number of resettled refugees and persons granted asylum over a five-year period. The increase in the number of refugees and decrease in the number of Others of concern during 1994-1995 is due to a slightly changed definition of the two groups.

Côte d'Ivoire. The reduction by more than 60,000 persons reflects the results of a registration during 1995.

Federal Republic of Yugoslavia. The information provided is based on estimates. More precise figures will be available once the results from the census, carried out during the first part of 1996, become available.

Finland. The refugee population estimate includes persons allowed to remain for humanitarian reasons and family reunion.

France. The refugee population estimate in France is based on the number of refugees registered with the Office Français de Protection des Réfugiés et Apatrides (OFPRA) (129,000), the number of refugee minors (estimated to be 26,000), as well as the number of refugees from former Yugoslavia who were granted temporary protection (some 15,000). The number of Algerians under temporary protection is unknown.

Germany. According to figures provided by the Federal Ministry of the Interior, the total number of refugees and asylum-seekers in Germany at the end of 1995 was estimated at some 1.65 million persons. These were made up of the following groups:

- (a) 158,600 persons granted asylum and refugees recognized abroad (under Art. 16 of the German Constitution) (source: Central Aliens Register (CAR));
- (b) 130,000 family members of persons granted asylum who arrived after the principal applicant and who did not apply for "family" asylum (based on estimate);
- (c) 91,100 quota (mainly Indo-Chinese) refugees (partially based on CAR, partially estimate);
- (d) 18,800 "homeless" foreigners (source: CAR);
- (e) 372,000 asylum-seekers (source: CAR);
- (f) 320,000 civil war refugees from Bosnia and Herzegovina;
- (g) 550,000 "de facto" refugees (persons who cannot return to their country of origin for political or humanitarian reasons) (source: estimate based on CAR).

For 31 December 1995, the number of refugees (569,000) comprises (a), (c) and (f), and the Others of concern (some one million persons) (b), (d), (e) and (g). As at 31 December 1994, however, all of the categories (a) through (g) except asylum-seekers and civil war refugees, were included under Refugees. This explains the significant fall in the number of refugees in Germany between 31 December 1994 and 31 December 1995.

Iran (Islamic Republic of). Some 595,500 Iraqi refugees have been included in the "Assisted" category at the end of 1995. During 1995, a medical referral system to provide curative medical services to primarily non-camp refugees was established in the major refugee inhabited provinces. Assisted organized repatriation is also available for all Iraqi refugees.

Ireland. The 1995 figures are based on those provided in 1994.

Lebanon. The decrease in the number of Others of concern, recorded between 1994 and 1995, is due to the granting of Lebanese citizenship to some 10,100 stateless persons.

Luxembourg. The 1995 figures are based on those provided in 1994.

Kuwait. The Others of concern include Bidoons and Palestinians with Jordanian identity documents.

Netherlands. The 1995 refugee population estimate is based on figures provided by the Central Bureau for Statistics. The number of persons granted temporary protection as well as those allowed to remain for humanitarian reasons is unknown.

Pakistan. The number of non-assisted Afghan refugees is not known (displayed in the tables as zero).

Portugal. The 1995 figures are based on those provided in 1994.

Russian Federation. The Others of concern include so-called involuntarily relocated persons (IRPs) who moved to the Russian Federation from countries of the former USSR. In general, these people are ethnic Russians who returned to the "motherland" following armed conflicts and/or conditions of instability in the countries of residence.

Rwanda. The returnee population figure as at 31 December 1994 (800,000) includes the "old caseload" of persons who returned from Uganda during the second part of 1994. The returnee population estimated at 31 December 1995 (some 227,000) concerns people who returned during 1995, including both the "old and new caseload", but excludes the 15,000 persons expelled from Zaire during August. The voluntary repatriation statistics (Table 11) include both the "old and new caseloads".

Sierra Leone. The number of unassisted refugees is unknown to the Office.

South Africa. The 7,700 Others of concern to UNHCR as at 31 December 1995 are asylum-seekers.

Sri Lanka. By the end of 1995, some 54,000 persons had returned from India since 1992, of whom some 10,000 returned during 1995. The majority have returned to their respective places of origin or residence and have been benefiting from community-based micro-projects funded by UNHCR. In late 1995, after the escalation of the military activities in the Jaffna Peninsula, northern Sri Lanka, a considerable number of persons became displaced in the area where micro-projects had been implemented. Thus, at the end of 1995, approximately 200,000 IDPs were considered as assisted.

Uganda. During 1995, the refugee population in Uganda was reduced by more than 50,000 persons following a registration.

United Kingdom. The Convention refugee population estimates are based on the cumulative number of resettled refugees as well as the granting of asylum to asylum-seekers over the past ten years, whereas the numbers of Others of concern is based on the cumulative number of persons allowed to stay for humanitarian reasons over the past ten years.

United States. The Convention refugee population estimates are based on the cumulative number of refugee arrivals as well as the granting of asylum to asylum-seekers over the past five years. The increase in the number of Others of concern to UNHCR between 31 December 1994 and 31 December 1995 is due to the inclusion of asylum-seekers in the 1995 statistics.
