Handbook for **Emergencies**

© United Nations High Commissioner for Refugees, Geneva
Third Edition February, 2007

ISBN

This document is issued by the Office of the United Nations High Commissioner for Refugees for general distribution. All rights are reserved. Reproduction is authorized, except for commercial purposes, provided UNHCR is acknowledged.

Chapters may be located quickly by using the key on the contents page. Particular subjects may be located by using the index. The handbook is structured as follows:

Section One

summarizes UNHCR's mandate of international protection and the aim and principles of emergency response;

Section Two

deals with emergency management;

Section Three

covers the vital sectors and problem areas in refugee emergencies, including health, food, sanitation and water, as well as key field activities underpinning the operations such as logistics, community services and registration. The chapters in this section start with a summary so that readers, who might not need the full level of detail in each of these chapters, can understand the basic principles of the subject quickly;

Section Four

gives guidance on the support to field operations, primarily administration and staffing;

The Appendices

include a "Toolbox" which gathers, in one location, the standards, indicators and useful references used throughout the handbook;

Key companion references for this handbook include:

- Catalogue of Emergency Response Resources which sets out what resources can be immediately deployed to UNHCR emergency operations;
- Checklist for the Emergency Administrator which includes many of the essential UNHCR forms, policy documents and guidelines referred to in this handbook;
- UNHCR Manual, and in particular its Chapter 4 dealing with Operations Management

	3 Glossary	568
	4 Index	570

Answering people's urgent need for protection and humanitarian assistance anywhere in the world has been an essential part of UNHCR's work for the past three decades. Refugees and others fleeing conflict need help as quickly as possible, requiring a strong institutional commitment to emergency preparedness and response. The international community and public opinion expect aid workers to be on the scene and take action – and to do so swiftly.

Since 1998, when the second edition of UNHCR's Emergency Handbook appeared, the Office has been involved in large-scale humanitarian operations in the Great Lakes region of Africa, Timor-Leste, Kosovo, Afghanistan and Pakistan, to name just a few. We have been called on also in many smaller crises where our capacity for timely deployment of staff and aid has saved lives, answered sudden operational shifts and ensured that refugees at risk have received legal and physical protection. This year alone, UNHCR dispatched over 200 emergency staff to 27 countries on four continents.

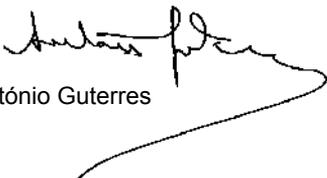

Developing the mechanisms to reinforce a quick, agile and flexible emergency response capacity is one of our operational priorities for the coming years. We have established an Early Warning system, linking key preparedness measures at country, regional and headquarters levels. Events in Lebanon demonstrated the importance of a robust logistics capacity and, as a result, we have revamped our supply and management service and integrated it in the Division of Operational Services where it will be closely associated with our emergency service. We have increased the number of staff available at any time for immediate deployment. With the collaboration of other humanitarian actors, our target is to be able to respond to unexpected refugee crises involving up to 500,000 people.

In addition to traditional emergency skills, evolving situations increasingly demand specific protection and coordination experience. UNHCR is asked to help identify genuine asylum-seekers among the growing groups of new arrivals mixed in with migrants, putting a premium on our ability to deploy qualified staff for protection screening and refugee status determination. As part of the collective response by the United Nations and the humanitarian community to situations of internal displacement, UNHCR has assumed leading responsibility for the protection, emergency shelter and camp coordination and management clusters, necessitating coordination and emergency management expertise.

As a reference tool which serves also to reinforce a common understanding among the many key actors in emergency situations, the third edition of UNHCR's Emergency Handbook reflects these latest developments.

This version includes a number of important revisions based on valuable inputs from the non-governmental organizations and other partners who are an integral part of our standby capacity. Updates include an emphasis on security awareness as an integral part of daily life and work in operations, along with important information on UNHCR and the military; a new chapter on combating HIV/AIDS in refugee situations; and how to prevent and respond to sexual and gender-based violence in emergencies. The revised Handbook underscores the need to understand, from the very outset of an emergency, the protection risks facing different members of a community and describes how to conduct participatory assessments with women, girls, boys and men to ensure adequate assistance and protection for all.

I am pleased to introduce the updated version of the Emergency Handbook and hope that you will find it helpful in every phase of an emergency operation.

António Guterres

UNHCR' Mission Statement

UNHCR, The United Nations refugee organization, is mandated by the United Nations to lead and coordinate international action for the world-wide protection of refugees and the resolution of refugee problems.

UNHCR's primary purpose is to safeguard the right and well-being of refugee. UNHCR Strives to ensure that everyone can exercise the right to seek asylum and find safe refuge in another state, and to return home voluntarily. By assisting refugees to return to their own country or to settle in another country, UNHCR also seeks lasting solutions to their plight.

UNHCR's efforts are mandated by the organization's Statute and guided by the 1951 United Nations Convention relating the Status of Refugees and its 1967 Protocol. International refugee law provides an essential framework of principles for UNHCR's humanitarian activities.

UNHCR's Executive Committee and the UN General Assembly have also authorized the organization's involvement with other groups. These include people who are stateless or whose nationality is disputed and, in certain circumstances, internally displaced persons.

UNHCR seeks to reduce situations of forced displacement by encouraging states and other institutions to create conditions which are conducive to the protection of human rights and the peaceful resolution of disputes. In pursuit of the same objective, UNHCR actively seeks to consolidate the reintegration of returning refugees in their country of origin, thereby averting the recurrence of refugee-producing situations.

UNHCR offer protection and assistance to refugees and other in an impartial manner, on the basis of their need and irrespective of their race, religion, political opinion or gender. In all of its activities, UNHCR pays particular attention to the needs of children and seeks to promote the equal right of women and girls.

In its efforts to protect refugees and the promote solutions to their problems, UNHCR works in partnership with governments, regional organizations, international and non governmental organization. UNHCR is committed to the principle of participation by consulting refugees on decisions that affect their lives.

By virtue of its activities on behalf of refugees and displaces people, UNHCR also promotes the purposes and principles of Unites Nations Charter: maintaining international peace and security, developing friendly relations among nations, and encouraging respect for human rights and fundamental freedoms.

Definition and aim

1. The majority of UNHCR's operations begin as a result of an emergency caused by a sudden influx of refugees¹ and IDPs. The organization and procedures of UNHCR reflect this. Much of UNHCR's normal work is, in effect, built upon emergency interventions and responses. There are, however, situations that are clearly exceptional. This handbook addresses the needs and requirements for a comprehensive response to such situations.

Definition of a refugee emergency

2. The definition of a refugee emergency for the purposes of UNHCR and this handbook might be:

any situation in which the life or well-being of refugees will be threatened unless immediate and appropriate action is taken, and which demands an extraordinary response and exceptional measures.

3. Sudden refugee influxes are, of course, not the only situations which demand an extraordinary response from UNHCR. Equally swift action will be required in other types of emergency. For example, an emergency can develop in an existing operation, such as when events suddenly place in danger refugees who had previously enjoyed asylum in safety (discussed in chapter 2 on Protection). It can also erupt during the final phase of an operation as in the case of a large-scale repatriation (discussed in chapter 19 on Voluntary Repatriation). In addition there are complex emergencies, which are humanitarian crises involving the competence of more than one UN agency (see chapter 7 on Co-ordination for a full definition). The general guidance provided in this handbook will be useful to these types of emergencies as well.

¹ For convenience, "refugee" is used in this handbook to refer to all persons of concern to UNHCR. The different categories of persons of concern, including refugees, are defined in chapter 2 on Protection.

4. What is important is the ability to recognize, in time, the development of situations in which an extraordinary response will be required of UNHCR in order to safeguard the life and well-being of refugees.

5. Much of the handbook is concerned with guidelines on the protection and humanitarian assistance likely to be needed when large numbers of refugees cross frontiers to seek asylum; and also for internally displaced persons (IDPs) as a result of conflict or natural disasters i.e. an emergency caused by a sudden influx of refugees or IDPs.

Aim

The aim of UNHCR's emergency response is to provide protection to all persons of concern to UNHCR and ensure that the necessary assistance reaches them in time.

Responsibilities

Governments and UNHCR

6. Host governments are responsible for the security and safety of, assistance to, and law and order among refugees and internally displaced persons (IDPs) on their territory. Governments often rely on the international community to help share the burden, and UNHCR provides assistance at the request of governments or the UN Secretary General.

The statutory function of providing international protection to refugees and seeking permanent solutions for their problems is however, always UNHCR's responsibility.

7. The role of UNHCR in emergency operations is primarily to protect refugees. UNHCR assists and complements the work of the government by acting as a channel for assistance from the international community, and by coordinating and monitoring implementation of the assistance. Whatever the organizational

manner in which UNHCR provides emergency assistance in response to a government request, UNHCR is responsible for ensuring that the protection and immediate material needs of the refugees are met effectively and appropriately. This requires a good understanding of the community and analyzing the situation of the diverse groups from an age and gender perspective together with planning protection and assistance responses with the community.

UN organizations

8. The material needs of refugees are likely to be covered by sectors for which other organizations in the UN system have special competence. In particular the World Food Program (WFP), with which UNHCR has established a close partnership, and who provides the major part of the emergency food needs of refugees. In recognition of each organization's comparative advantages and skills, and with the aim of giving consistency and predictability to the relationships between them, UNHCR has concluded Memoranda of Understanding (MOUs) with a number of UN organizations. These MOUs also cover issues related to emergency preparedness and response, such as joint contingency planning, joint assessments and development of standards and guidelines, as well as programme implementation. Notable among these are the MOUs with World Food Programme (WFP), the United Nations Development Programme (UNDP) and the United Nations Children's Fund (UNICEF). UNHCR has also signed MOUs with the United Nations Population Fund (UNFPA), the United Nations Development Fund for Women (UNIFEM) and the World Health Organization (WHO) (see Appendix 3 for additional MOUs).

Responsibility for coordinating the response of the UN system to a refugee emergency normally rests with UNHCR. Complex emergencies involving IDPs are dealt within the UN collaborative response described under Chapter 7 "Coordination and site level organisation".

9. The UN body charged with strengthening the coordination of humanitarian assistance of the UN to complex emergencies is the Office for the Coordination of Humanitarian Affairs (OCHA), through coordination, policy development and advocacy.

Non-Governmental Organizations

10. A large number of non-governmental organizations (NGOs) provide assistance to refugees in emergencies. These organizations often act as UNHCR's operational partners. The division of responsibilities is determined by the implementing arrangements agreed between them, the government and UNHCR regardless of whether funding is from UNHCR or elsewhere. This is discussed in more detail in chapters 7 and 8 on coordination and implementing arrangements

Other organizations

11. A number of other organizations also act as operational partners in the provision of assistance to refugees in emergencies. In particular, the International Committee of the Red Cross (ICRC), the International Federation of Red Cross and Red Crescent Societies (IFRCS) with the National Red Cross and Red Crescent Societies, have long provided such assistance. The ICRC mandate requires a high degree of operational neutrality and independence, which sometimes limits their participation in coordination mechanisms and the exchange of information between them and other organizations.

12. Other operational partners could include inter-governmental organizations, for example the International Organization for Migration (IOM). The objective of IOM is to ensure the orderly migration of persons who are in need of international migration assistance. IOM works subject to the agreement of both (or all) the states concerned with the migration. IOM has worked closely with UNHCR, notably by assisting with voluntary repatriation.

13. In order to enhance strategic partnerships and complement UNHCR's emergency preparedness and response capacity, EPRS concluded agreements with Governmental and Non-Governmental partners since 1992. MOUs covering emergency staffing, support to emergency teams and operational capability mechanisms were signed with the Danish and Norwegian Refugee Councils, Swedish Rescue Services Agency, AUSTCARE, EMERCOM, Norwegian Civil Defence, Red R Australia, Swiss Development cooperation, Save the Children, Center for Diseases Control and Oxfam. Evaluations of these MOU are done following utilization in emergencies to determine how they improve UNHCR's capacities to deliver.

The refugees

14. Beyond the right to international protection under the Statute of UNHCR and under the 1951 Refugee Convention and 1967 Protocol, all refugees, as indeed all persons, have human rights. These are enshrined in the Charter of the United Nations and in the Universal Declaration of Human Rights: the fundamental right to life, liberty and security of person; protection of the law; freedom of thought, conscience and religion; and the right to own property. Refugees have the right to freedom of movement. However, it is recognized that, particularly in cases of mass influx, security considerations and the rights of the local population may dictate restrictions.

15. Refugees and displaced persons also have, of course, responsibilities towards the country where they have sought refuge. These are set out in Article 2 of the 1951 Convention: "Every refugee has duties to the country in which he finds himself, which require in particular that he conform to its laws and regulations as well as to measures taken for the maintenance of public order." The civilian nature of refugee status must be respected.

Defining responsibilities

16. All those involved both inside and outside the UN system, should have clearly defined responsibilities within a single overall operation. This can be achieved through the establishment of an appropriate coordinating structure at various levels to ensure that duplication of effort and gaps are avoided. In certain situations, the coordinating role of UNHCR may need to be more direct and operational, both in planning and executing the emergency response, and in providing expertise in specific sectors.

Principles of response

Introduction

17. Whatever the framework of responsibility for a particular refugee emergency, certain principles of response are likely to be valid. Many of these are common themes in the chapters that follow.

18. By definition, the needs of a refugee emergency must be given priority over other work of UNHCR. This is essential if the aim of ensuring protection and timely assistance to refugees is to be met. Leadership and flexibility are required of UNHCR in an emergency.

A rights and community-based approach

19. The following summarises how a rights and community based approach should permeate all UNHCR emergency operations:

i. All of UNHCR's programmes, policies, and operations should further the realization of the equal rights of women, men, girls, and boys of concern, of diverse backgrounds, as set out in international legal instruments.

ii. International legal standards should form the framework for UNHCR's protection strategies and programme assessments, analyses, planning, design (including setting goals, objectives and strategies), implementation, monitoring and evaluation. Protection objectives should be at the forefront of programme planning (see chapter 2 on Protection for more details).

iii. Our work should help to develop the capacity of States, as duty-bearers, to meet their obligations, and the capacity of women, men, girls, and boys of concern, as rights-holders, to claim their rights.

iv. We must work in partnership with persons of concern of all ages and diverse backgrounds in order to understand the community's priorities, capacities and resources, and to build on them in order to ensure that all members of the community are protected.

v. Women, men, girls, and boys should be engaged as partners in protection and programming activities. Our work should reinforce the dignity and self-esteem of the members of the community. It should help to empower the community as a whole, and individuals within the community, particularly women and girls, to access and enjoy their rights.

vi. Practices within a community, including traditional, cultural or religious practices that violate the rights of women and girls, should not be tolerated or overlooked. UNHCR has a responsibility to work towards the prevention and elimination of such practices at the individual and community levels, and to take action to ensure that individual women and girls whose rights have been, or are at risk of

being, violated are protected. International legal standards should guide our work in this respect.

vii. It is crucial that UNHCR work closely with individual community members and different groups within the community in order to prevent and eliminate traditional, cultural or religious practices that violate the rights of women and girls.

Get the right people to the right place at the right time

20. The single most important factor in determining whether or not sufficient emergency assistance reaches the refugees in time, and in an appropriate manner, will probably be the people involved in organizing and implementing the operation.

Sufficient UNHCR and implementing partner staff of the right calibre, experience and gender balance must be deployed in the right places and equipped with the authority, funds, material and logistical support needed. They must be committed to a multi-functional team approach in all aspects of their work.

A multi-functional team approach

21. Multi-functional teams are responsible for undertaking participatory assessment in UNHCR's emergency operations. A multi-functional team is, at a minimum, composed of protection, programme, and community-service staff. Ideally, it should include female and male staff, both national and international and of different levels.

22. A successful multi-functional team approach requires the involvement and commitment of the emergency team leader who should ensure the engagement of all members of the team. Offices should ensure that multi-functional teams include the wider circle of actors on the ground, such as partners, government counterparts, NGOs, other UN agencies, and donors, as appropriate.

23. No amount of expertise and experience can substitute for organizing ability, flexibility, a readiness to improvise, ability to get on with others, ability to work under pressure no matter how difficult the conditions. An aptitude to promote a rights and community-based approach, capacity to recognize age and gender considerations, tact, sensitivity to other cultures and particularly to the plight of refugees, a readiness to listen, and, not least, a sense of humour, are essential.

Work with refugees through a community-based approach and promote self-reliance

24. In order to ensure that the assistance provided to refugees is appropriate, the refugees must be involved from the outset in the measures taken to meet their protection and assistance needs. In addition, all components of the operation must be planned in such a way as to promote their self-reliance. Obvious as this principle is, the pressures of an emergency often make it easier to organize an operation from the outside for, rather than with, those whom it is to benefit.

25. If the emergency operation involves the refugees in this way from the start, its effectiveness will be greatly enhanced. Furthermore, such an approach will allow the refugees to maintain their sense of dignity and purpose, encourage self-reliance and help avoid dependency. In emergencies, refugees are often regarded as helpless and passive recipients of external assistance. In the long term this approach by humanitarian workers sets a pattern of dependency. Refugees must be encouraged to help themselves by using their own skills and resources from the beginning of an emergency. Community services staff are essential actors in supporting the mobilization of the community and facilitate a participatory process.

It is important to ensure refugee participation; women, men, adolescents, boys and girls at all stages of planning, implementation and monitoring.

26. Refugees are often most able to help themselves, and thus be least reliant on outside assistance, if they are not grouped together in highly organized camps, but rather reside in small, less formal groups.

27. The interests of refugees with specific needs, such as persons with disabilities are better cared for and such efforts are more sustainable if community support and involvement is harnessed right from the start. In addition, refugee involvement helps ensure that the emergency response addresses social, human and emotional needs, and goes beyond the provision of material relief.

Be aware of social and economic roles and identify groups at specific risk.

It is crucial to plan and manage an emergency response effectively by undertaking participatory assessment with groups of affected population to identify and analyse the changing social and economic (gender) roles of women, men, boys and girls. This will enable emergency interventions to meet assistance standards and promote gender equality¹.

28. It is essential to understand socio-economic factors, including gender relations, when planning and implementing the emergency response to avoid unintentionally depriving some refugees of the benefits of assistance and inadvertently exposing them to protection risks. This is often true for women, children, older persons and the disabled. UNHCR pays particular attention to the needs of these groups, especially in emergencies. It is important that groups with specific needs are identified at the outset and that meetings are held with them to determine

¹ *The UNHCR Tool For Participatory Assessment in Operations, 2005*

needs and responses. Thus, in the planning and implementation of an emergency response, groups with specific needs must be monitored systematically to ensure that they are not further disadvantaged and targeted measures should be taken to meet their particular needs. In an emergency, health staff should spend time with women, girls, boys and men to identify patterns of SGBV and establishing prevention and response mechanisms (see chapter on Prevention and Response to SGBV in Emergencies).

29. Even in an emergency, refugees are likely to have some form of representation, through a community or group organization.

It is important to find out exactly what kind of leadership structure exists and what measures are taken to ensure the views and voices of women and children are represented in the forum. Specific measures must be instituted to ensure equal participation of women and men in decision-making processes.

It is also through an effective use of their active participation and equal representation (women, men, girls and boys of different backgrounds) that refugees' rights can be better promoted. However, be aware that leaders may sometimes not be representational, or may have an agenda or objectives which could have adverse consequences on other refugees, hence, the importance of meeting with different members of the community and working with the leadership to promote effective communication with the whole community.

Ensure the measures are appropriate

Age, gender, and diversity mainstreaming (AGDM) in emergencies

30. UNHCR's AGDM strategy aims to ensure that the meaningful participation of all persons of concern to the office is

integral to the design, implementation, monitoring, and evaluation of UNHCR's emergency protection strategies and programmes. Through dialogue with women, men, girls, and boys of diverse backgrounds and ages, facilitated by multi-functional teams, a proper analysis of the protection problems they face as well as their proposed solutions can be undertaken.

31. The findings from participatory assessments and all other information should be analysed from an age, gender and diversity perspective. This analysis provides the basis for emergency planning and responses designed to ensure the effective protection of all members of the community. There needs to be a continuous exchange of information with the different members of the community to ensure that responses are regularly evaluated and adapted according to feedback from the people of concern.

Identify protection risks and needs from an age, gender and diversity perspective

32. An appropriate response in the provision of protection and material assistance requires participatory assessment of the protection risks facing refugees and their needs. This should take into account not only their specific protection needs, material state, the resources available as well as their capacities, but also their culture, age, gender and background including those of the nationals in whose country they are granted asylum. The provision of protection and of essential goods and services must be provided to refugees in ways which actually meet their needs.

33. In collaboration with other agencies, promote and ensure collection of sex and age disaggregated data and information on groups with specific needs, such as persons with disabilities, unaccompanied and separated children.

Be flexible and respond to changing needs

34. What is appropriate will vary with time. In the early stages of a major emergency, special measures that rely heavily on outside assistance may be necessary. However, as a general principle, the response should draw on refugee capacities, local resources, materials and methods, to the extent possible and should, for example, avoid regimented refugee camps. Solutions that can be readily implemented with existing resources and simple technologies should be sought.

Identify standards

35. It is an important responsibility of UNHCR to determine with the government and operational partners the standards of assistance that are appropriate. This requires expertise in a number of disciplines. The guidelines in Section III of this handbook suggest general considerations, to be modified in light of the circumstances of each emergency. Appendix 1 (Toolbox) also contains standards. Each sector would then need to decide and be accountable for the correct level of overall assistance from all sources.

36. As a general principle, the standards of assistance must reflect the specific needs of the refugees based on their age, sex, physical and psychological condition, situation and experiences. At the same time account must be taken of the standards planned for and actually enjoyed by the local population.

37. If the standards have been correctly determined, they cannot later be lowered without harm to the refugees. The refugees must, for example, receive a minimum basic food ration. Outside contributions required to reach the standards will, however, naturally be reduced as the refugees become more self-reliant.

Do not treat issues in isolation

38. In all stages of an emergency, the problems and needs of refugees must be seen comprehensively, and sector-specific tasks should be set within a multi-sectoral framework, since action in one area is likely to affect others. For example the real solution to a health problem might be found in improving the water supply. Ensure the correct balance in resource allocation between the different sectors.

A multi-functional team approach, that promotes a community-based response and meets the standards of assistance are important criteria of an emergency response.

Ensure environment is considered at an early stage

The emergency phase is the critical moment at which environmental degradation may be confined or limited.

39. There are a number of strong arguments for making environmental interventions as soon as possible during the emergency phase of a response, such as:

- ◆ Unnecessary damage to the environment is most effectively prevented or mitigated during this phase.
- ◆ Activities undertaken at an earlier stage of an operation are far more cost-effective than those taken later.
- ◆ The potential for promoting environmental awareness among the refugee population is greater if activities begin at an early stage.
- ◆ Minimization of refugee-related environmental impacts will reduce the burden placed on the local population and may have the added benefit of decreasing friction between the local population and refugees.

40. Similarly, issues which are cross-cutting in nature should not be neglected.

This is often the case with issues concerning age and gender groups, and the environment.

41. Strengthening institutional capability to deal with environmental matters in the field is essential. The provision of clear guidance to UNHCR and implementing partner field staff on how environmental matters should be treated within UNHCR's operational framework is particularly important (see chapter 4 on Contingency Planning).

42. Although our aim is to minimize environmental impacts caused by refugees, it is relevant to note that, in certain locations, the presence of environmental hazards may also occasionally pose a risk to the health of refugees. This may arise from features such as the presence of endemic diseases, high levels of air or water pollution, and toxic or radioactive chemicals in the soil.

Work for durable solutions

Always Remember the Longer Term

Objectives

43. A general principle in considering the appropriateness of measures is that, from the start, resources must be divided between immediate needs and actions aimed at longer-term improvements and the prevention of problems. For example, resources must be devoted to general public health measures as well as to the treatment of individual diseases, which will include many that could be prevented by better water and sanitation. Emergency assistance is to be allocated to the maximum extent possible to activities which will be of lasting benefit, thus keeping any relief phase as short as possible.

44. From the beginning of an emergency, and even during preparations for an emergency, planning must take into account the post emergency phase as well as the envisaged durable solutions. This requires that the response both encour-

ages the self-reliance of the refugees and reduces prolonged dependency on outside relief, without preventing the promotion of a long-term solution as soon as possible.

45. As a general principle, the best solution is voluntary repatriation. Where this is not possible, assimilation within the country of asylum (local settlement) is in most circumstances preferable to assimilation within another country (resettlement). This is particularly true for large groups and in cases where resettlement would take place in a cultural environment alien to the refugees. There may, however, be situations in which resettlement is the only way to ensure protection.

Food and non-food items distribution

46. The distribution of food and non food items cannot be predetermined by handbooks and rules, these can only provide guidance. Once emergency team members arrive on the ground, they will find many unforeseen situations and a wide variety of needs. The important rule is to remember to pay close attention to the different requirements people may have and to respond in a reasonable manner to situations, such as the needs of older persons in a cold climate if you only give them one blanket and remember they will be different to those of young people. Think about the implications of forcing people to share blankets and plastic sheeting, will you be mixing young male and female adolescents, will you be forcing different families from different ethnic groups to mix, will you be putting single women at risk, and will people be able to eat the food you are requesting, did you check with them if it was appropriate. Be flexible and **explain** the situation to people. Get them to help you prioritise if there is not enough to go round. Try and be as generous as possible when allocating assistance rather than "protecting" it. Keep an open mind and try to understand people's urgent needs, think

age, gender and diversity and make sure you keep double checking if the assistance reached the right people.

Monitor and evaluate the effectiveness of response

47. Whatever the nature of the emergency, the action required of UNHCR is likely to vary with time and as circumstances change.

It is essential that the effectiveness of the response be kept constantly under review through continued participatory assessment and action adjusted as necessary and in time.

This will require sound monitoring, reporting and evaluation systems, including sex and age disaggregated data and indi-

cators, to detect deterioration or change. Also, a continuous review of the aims of UNHCR's assistance, both in terms of bringing the emergency to an early end and for the promotion of a durable solution, is necessary.

48. Such monitoring must also ensure that the funds provided voluntarily to UNHCR by governments and others are being used to the best advantage. This is inherent in the principle of appropriate response. It should be borne in mind that whatever funds may be available in the early stages of an acute humanitarian emergency, the passage of time will produce financial constraints. Thus it is important that actual and potential donors see that the action proposed is indeed essential, and that its impact is effective.

UNHCR's mandate

UNHCR's primary responsibilities are:

- to ensure that all persons of concern to the office receive international protection; and
- to seek permanent (durable) solutions for their situation.

1. Ensuring that UNHCR meets these responsibilities is not the sole responsibility of the “protection officer” in an emergency but a collective responsibility of all UNHCR staff.

International protection

International protection includes a range of concrete activities that ensure that all women, men, girls and boys of concern to UNHCR have equal access to and enjoyment of their rights in accordance with international law. The ultimate goal of these activities is to help them in permanently rebuilding their lives within a reasonable amount of time.

2. The need for international protection arises when States are unable or unwilling to protect their nationals. In such circumstances, these people need the protection and support of other governments and humanitarian agencies such as UNHCR. International protection is a temporary substitute for the protection normally provided by States to their nationals.

3. States are responsible for protecting people who seek safety in their territory. UNHCR works closely with these States and other authorities to ensure that such persons are able to exercise their basic human rights and live securely and with dignity. **UNHCR is not a substitute for State responsibility.**

4. Understanding who is entitled to international protection, the legal basis for securing this protection, the purpose and means to provide international protection is essential. This chapter addresses these issues.

'Persons of concern' to UNHCR

The first step in any emergency is to establish whether individuals or groups are of concern to UNHCR and therefore entitled to international protection.

5. In an emergency, UNHCR and its partners can expect to encounter the following **persons of concern** to UNHCR:

- ♦ **Asylum-seekers:** When civilians seek safety in countries other than their own, they are said to be seeking asylum and are known as asylum-seekers. This is the first step towards being formally recognized as refugees. Very often, people do not formally register as asylum-seekers. However, they may still be in need of international protection.
- ♦ **Refugees:** According to UNHCR's mandate, a refugee is any person who is outside his or her country of origin or habitual residence and who is unwilling or unable to return there owing to:
 - i. a well-founded fear of persecution for reasons of race, religion, nationality, membership of a particular social group or political opinion (this is similar to the definition provided in the *1951 Convention*); or
 - ii. serious and indiscriminate threats to life, physical integrity or freedom resulting from generalised violence or events seriously disturbing public order.
- ♦ **The internally displaced:** The internally displaced are those who have been forced to flee their homes as a result of armed conflict, situations of generalised violence, violations of human rights, or natural or human-made disasters. Unlike refugees who have crossed an international border, the internally displaced remain uprooted within their own country. As citizens within their own country, they are entitled to enjoy, in full equality, the same rights and freedoms under international and domestic law as do other persons in their country. They

shall not be discriminated against in the enjoyment of any rights and freedoms on the ground that they are internally displaced. Sometimes, unfortunately, refugees who return to their countries remain internally displaced until they are able to return to their areas of origin within the country. UNHCR is committed to engaging with the internally displaced affected by armed conflict, generalised violence or violations of human rights. Only exceptionally and on a good offices basis, does UNHCR assist persons who are internally displaced for other reasons such as natural disasters.

- ◆ **Returnees:** Returnees are refugees and the internally displaced who return to their country/area of origin or habitual residence (and chapter 22 on voluntary repatriation). UNHCR has a legitimate interest in the consequences of return, not least to ensure that further displacement does not take place.
- ◆ **Stateless persons:** A stateless person is one who is not considered to be a national by any state under its laws. A stateless person can also be a refugee when, for example, s/he is forced to leave her/his country of habitual residence because of persecution. However, not all stateless persons are refugees, and not all refugees are stateless. The UN General Assembly has mandated UNHCR to work to prevent statelessness and to act on behalf of stateless persons. UNHCR assists stateless persons in resolving their legal problems, obtaining documentation, and eventually restarting their lives as citizens of a country. UNHCR also provides technical and legal advice to governments on nationality issues, including assistance in drafting and implementing nationality legislation designed to prevent and resolve situations of statelessness. The main international instruments dealing with statelessness are listed in Annex 1.

6. On occasion UNHCR has, for humanitarian reasons and on the basis of its mandate (including upon the specific request of the General Assembly or Security Council), become involved with individuals other than the categories mentioned above such as local populations at risk who may not have fled their homes.

The legal basis

For protection activities

7. Humanitarian workers must be familiar with legal principles that form the basis for all protection activities that UNHCR and its partners undertake in an emergency. These principles can be found in:

- i. **International refugee law:** Including the *1951 Convention Relating to the Status of Refugees* and its *1967 Protocol*; The *1969 Convention Governing the Specific Aspects of Refugee Problems in Africa of the Organization of African Unity (OAU)* (for operations in Africa only) the *1984 Cartagena Declaration on Refugees*, and the *1994 San Jose Declaration* (for operations in Latin America only).
- ii. **International human rights law:** Including the *International Covenant on Economic, Social and Cultural Rights* of 16 December 1966; the *International Covenant on Civil and Political Rights* of 16 December 1966 and its two optional protocols; the *Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment* of 10 December 1984 and its optional protocol; the *Convention on the Rights of the Child* of 20 November 1989 and its two optional protocols; the *International Convention on the Elimination of All Forms of Racial Discrimination* of 21 December 1965; and the *Convention on the Elimination of All Forms of Discrimination against Women* of 18 December 1979 and its optional protocol.

iii. **International humanitarian law and the law of neutrality:** Including the four Geneva Conventions of 12 August 1949 and the two protocols of 8 June 1977. The law of neutrality especially the 1907 *Hague Convention Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land* is also useful in countries neighbouring armed conflict.

iv. **International criminal law:** Including the *Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children*, and the *Protocol against the Smuggling of Migrants by Land, Sea and Air*, both of which supplement the *United Nations Convention Against Transnational Organized Crime* of 15 November 2000.

8. Annex 1 lists these and other relevant international instruments and their main purpose(s). The UN Security Council and General Assembly Resolutions and non-binding legal texts such as the *Guiding Principles on Internal Displacement* are also essential in the protection of refugees and other uprooted people.

9. Even when an emergency occurs in a country not party to the relevant international and regional instruments, some of the principles embodied in the *1951 Convention* are considered customary international law and hence are binding on all states. Foremost amongst them is the principle of *non-refoulement*. The prohibition of torture as well as violence against women, that are both enumerated in human rights instruments, are also norms of customary international law. In addition, the moral strength and standard setting value of the conclusions on international protection of UNHCR's Executive Committee (ExCom) is not limited to states which are members of the Executive Committee (see chapter 9 for more details on EXCOM members).

10. Understanding the relevant **national laws** of the country in which persons of concern are residing in is also essential in ensuring their protection. On occasion, the standards established by national legislation may be far below those established by international law. In such cases, UNHCR must promote and uphold principles of international law.

For UNHCR's involvement

11. UNHCR's protection responsibilities have been established by the General Assembly (through the *Statute of the Office of the United Nations High Commissioner for Refugees* complemented by General Assembly and ECOSOC resolutions). The Statute has universal applicability.

12. In addition, UNHCR's protection function is facilitated by the *1951 Convention* that obliges States which are parties to the Convention to cooperate with UNHCR in the exercise of its functions and facilitate UNHCR's responsibility of monitoring the application of the Convention's provisions (Article 35). The 1969 OAU Convention contains a similar clause.

13. UNHCR is also guided (and bound by) international law and ExCom Conclusions mentioned above as well as UNHCR's own policies and guidelines.

UNHCR in emergencies

14. The legal basis on which UNHCR intervenes to secure the protection of refugees is contained in the instruments mentioned in paragraphs 7-13. However, it is the practical course of action adopted in emergencies that really determines the *quality* of protection offered to persons of concern to the agency.

Protection in emergencies frequently depends less on the fine print of a law and more on swift, appropriate action by UNHCR staff in the field.

15. In order for UNHCR to effectively discharge its mandate in an emergency, it is often essential, among other things that:

- i. A **multi-functional team** comprised of staff - both women and men - with protection, community services, programme, logistics, security and other expertise are rapidly deployed to address the emergency.
- ii. UNHCR constantly updates itself **with the rapidly developing and changing situation** it is confronted with. This includes the humanitarian, political, economic, social, security and other aspects of the situation.
- iii. UNHCR **establishes and maintains strong working relations with its partners**, in particular local and national authorities, the local military and international peacekeepers, other UN agencies, NGOs, other members of civil society and the persons of concern to UNHCR themselves that are present during the emergency. It may be necessary, due to lack of resources or expertise, to divide responsibilities among UNHCR and its partners.
- iv. **Partners understand UNHCR's concern and involvement in practical terms.** Local officials may not know of UNHCR's mandate, or of the humanitarian aid which UNHCR may already be giving elsewhere in the country. The approach should stress that the work of the High Commissioner is of an entirely non-political character and is strictly humanitarian.
- v. UNHCR has **free and unhindered access to all persons of concern** irrespective of their location (including border points, detention centres and camps).
- vi. UNHCR **maintains a continuing presence in the affected areas** - including border, camps, settlements and other locations - for as long as

necessary. During this time, UNHCR should work closely with refugees and others of concern using participatory assessment to identify protection risks; find and implement solutions together with them and evaluate the results of these solutions jointly.

- vii. UNHCR and its partners apply a **rights- and community-based approach** in their work.

16. During an emergency, some **immediate protection goals** that need to be met **together with States and other partners** often include:

- ◆ Ensuring that asylum-seekers, refugees and the internally displaced are able to **access safety** (access to safe territory; ensuring that borders are open to asylum-seekers and refugees);
- ◆ Ensuring that they are **not refouled** (forcibly sent back to a place where their life, liberty and security would be at risk).
- ◆ **Registering and documenting** persons (on an individual basis as soon as possible) and **determining whether they are of concern to the agency** and entitled to international protection.
- ◆ **Ensuring that the human rights** -- including the right to life, liberty, protection against arbitrary detention and **physical violence** such as rape and other forms of SGBV -- of persons of concern are respected and upheld.
- ◆ In ensuring that some of these rights -- such as the right to food, potable water, adequate shelter, education and health -- are accorded, **provide humanitarian assistance** if necessary. It is important to ensure that everyone has equal access to these amenities and that persons with specific needs, such as single-parents, separated children, the disabled and older persons are not excluded from receiving such support. This means

that humanitarian assistance must be planned from a protection perspective.

- ◆ Ensuring that the **civilian and humanitarian character of asylum is maintained** (ensure combatants are not allowed in camps, that they do not recruit people – especially children -- to fight with them).
- ◆ Identifying and addressing the **specific protection needs** of individual women, men, girls and boys, older persons, persons with disabilities and others.
- ◆ Working with countries to identify and provide **durable solutions** for refugees and others of concern to the agency.

These issues are discussed in the following pages in more detail.

Action taken at the outset of an emergency may have significant long-term consequences in ensuring that refugees and others of concern benefit from quality protection.

Securing access to safety

Often in emergencies, international protection requires that UNHCR and other humanitarian agencies first ensure that:

- i. **asylum-seekers, refugees and the internally displaced are admitted to safe territory;**
- ii. **that they are able to enjoy asylum/safety from violence and persecution;**
- iii. **that they are not forcibly returned (“re-fouled”) to territory where their life or liberty would be threatened; and**
- iv. **that they are treated in accordance with human rights standards.**

17. Establishing and maintaining a presence in the area where these uprooted people are and taking prompt action are often essential in ensuring that persons of concern to UNHCR are protected in emergencies.

Admission and non-refoulement

18. In an emergency involving asylum-seekers and refugees, often the first and most urgent priority is to ensure that their right to seek asylum is respected and to ensure they are not forcibly returned (*re-fouled*). There are a number of physical barriers that prevent refugees from accessing safety – land mines, borders monitored by the military and closed borders are some of them. There may also be legal barriers such as visa restrictions that prevent refugees from accessing safety.

19. In an emergency involving internally displaced persons, it would be necessary to ensure that they have access to safety and are not at risk of being forcibly sent back to a part of their country where their life or liberty would be threatened.

Admission

20. Asylum-seekers must be admitted to the State in which they seek refuge without discrimination on the basis of race, religion, nationality, political opinion or physical incapacity. This is in accordance with the *Universal Declaration of Human Rights* that states that “*Everyone has the right to seek and to enjoy in other countries asylum from persecution*”. Further, the UN General Assembly, on adopting the UNHCR Statute, called on governments to cooperate with the High Commissioner in the performance of his/her functions by, among other things, **admitting refugees to their territories.**

21. Similarly, the *Guiding Principles on Internal Displacement* states that internally displaced persons have the right to seek safety in another part of the country, the right to leave their country and the right to seek asylum in another country.

22. Refugees often do not have proper identification or travel documents because they leave their homes at short notice or because they are escaping from the very authorities that issue these documents in their country. Therefore, they may not

fulfil the immigration requirements of the country of asylum. Article 31 of the *1951 Convention* obliges States not to penalize refugees on account of their illegal entry or presence so long as they make their presence known as soon as possible.

Non-refoulement

23. Of cardinal importance is the principle of non-refoulement which includes:

- ◆ not denying access to their territory to asylum-seekers who have arrived at their border (access to asylum);
- ◆ not intercepting asylum-seekers or refugees outside the territory of any country (e.g. the high seas) with a view to prevent them from seeking safety;
- ◆ not expelling or returning asylum-seekers or refugees in any manner whatsoever to the frontiers of territories where his/her life or freedom would be threatened on account of his race, religion, nationality, membership of a particular social group or political opinion (Article 33 of the 1951 Convention).

In the case of the internally displaced, the Guiding Principles on Internal Displacement prohibits their forcible return to or relocation to any place where their life, safety, liberty and/or health would be at risk. This is supported by international human rights law and international humanitarian law.

24. The *1951 Convention* provides for very limited exceptions to the principle of *non-refoulement* of refugees, namely, for whom there are reasonable grounds for being regarded as a danger to the security of the country where they are, or for those who, having been convicted by a final judgement of a particularly serious crime, constitute a danger to the community of that country.

25. The principle of *non-refoulement* is recognized by a number of international and regional instruments. Because of its

fundamental and universally accepted character, the principle of *non-refoulement* has been recognized as a principle of customary international law.

The principle of non-refoulement is binding on all States irrespective of whether or not they are party to the 1951 Convention or other international or regional instrument.

26. In any emergency, UNHCR must take all measures to ensure that refugees and the internally displaced have access to safety and that they are not *refouled*. Some ways to ensure this include:

- i. **Developing good working relationships** with the local authorities, army personnel and border officials. In some situations, it may also be necessary to develop their operational capacity as they may not even have some basic tools to do their work (such as writing paper, pens and flashlights). Ensure that adequate arrangements are in place to receive single women and unaccompanied and separated children.
- ii. **Creating awareness** among these authorities. While it may not be possible to provide formal training during an emergency, UNHCR may promote principles of access to safety and *non-refoulement* through daily contacts with them. Give concrete examples to the authorities of what can happen to a refugee who is returned: it can mean that s/he is detained for long periods, tortured and raped or even killed.
- iii. Maintaining a **permanent presence** at the border. If it is not possible for UNHCR and its partners to be present at all border crossing points on a permanent basis, each crossing point should be visited frequently. This also helps in maintaining direct contact with the refugees, and helps in understanding what is happening in the country of origin as well as the problems on both sides of the border.

iv. Awareness may also need to be raised in the **local population and civil society** – the media may provide a forum – and public opinion can be an important influence.

27. Any issue relating to the admission or treatment of refugees at the border, (or the internally displaced who are prevented from accessing safety) should be brought immediately to the attention of the competent authorities in the host country and any other country involved for urgent remedial action.

Registration and documentation

28. Registration and the provision of individual identity documents are important protection tools that assists in ensuring, among other things, that the situation of persons of concern is properly monitored, that their human rights are protected, that they have access to assistance, that family reunification is facilitated and that a durable solution is found for them. Proper allocation of resources and programme planning is also dependent on proper registration, especially in the long-run. While registration and documentation is normally a State responsibility, UNHCR supports States in this area and even undertakes registration on behalf of governments at times.

29. Normally, upon accessing safety, asylum-seekers, refugees and the internally displaced should be registered individually as soon as possible. However, in emergencies when they arrive in large numbers, it is often impractical to register them individually or in detail at the outset. Therefore, it may be necessary to begin by conducting ‘population estimates’ and undertaking brief forms of registration until the situation is safe and stable enough to register them individually (see chapter 10 for more details on registration). Nonetheless, persons with specific needs must be identified by the community and staff to ensure adequate protection from the outset.

30. Similarly, while it would be difficult to provide individual identity documents during the first phases of an emergency, it is important to work towards a system by which this is possible in order to protect them more effectively (see chapter 10 for more details on documentation).

31. Over time, governments should, with the support of UNHCR and its partners, ensure that the **births, deaths and marriages** of people of concern to UNHCR are also registered and documented by the government. This assists, among other things, in ensuring that people can exercise their rights in accordance with the relevant laws, that they do not face problems when finding a permanent solution (resettlement, for instance) and that situations of statelessness are avoided in the future.

32. Women and children who are not registered or provided with documents may be denied access to fundamental human rights. Refugee women, particularly those who were separated from their husbands, may not be able to access food or essential services, seek support for their children, or claim or inherit property on return. Women and children may be more prone to sexual exploitation, early and forced marriage, slavery, trafficking, permanent separation from families, and unauthorized and illicit adoption.

33. Efforts must be taken to ensure that the registration and documentation process does not directly or indirectly discriminate against women and girls, and that all women and girls, regardless of age and background, are able to fully participate. Parents or caregivers may not want to register girls for a number of reasons. They may also not want to declare separated children living with them and who are working as unpaid servants. When registration is undertaken by the State, especially with the internally displaced, UNHCR must ensure that these minimum standards are met. In some locations sex-

ual exploitation has been linked to the registration process.

Refugee status determination

34. States recognize refugees on their territory based on the definition provided in the *1951 Convention*. UNHCR recognizes refugees in accordance with its **mandate** (see section ‘Persons of concern’ of this chapter for the mandate definition of a refugee). This normally happens in countries that have not established a procedure to determine refugee status or in countries where the asylum procedures are not functioning properly. Refugees recognized by States as well as by UNHCR are of concern to UNHCR. A person does not become a refugee because s/he is recognized as such by a State or by UNHCR, but is recognized because s/he is a refugee. Recognition of his/her refugee status does not therefore make him/her a refugee, but declares him to be one.

35. Refugees may be recognized by States (based on the 1951 Convention) or by UNHCR (in accordance with its mandate) either on an individual or on a group basis. If large numbers of people have fled persecution or conflict, they are often recognized as a group on a prima facie basis.

This means that based on the objective conditions in the country of origin, UNHCR and/or States can consider every member of the group as a refugee in the absence of evidence to the contrary. This is a practical measure to allow refugees to receive international protection without the formality of undergoing individual refugee status determination.

36. In the case of mass influx, the aim is to secure treatment in accordance with universally recognized humanitarian principles not necessarily directly linked to the legal status of those in need. The speed and quality of intervention to secure protection is the first priority.

Exclusion from international refugee protection

37. Certain persons do not fall under UNHCR’s competence and are excluded from international refugee protection. These include:

- i. Persons who are not entitled to the benefits of international refugee protection* because they are receiving protection or assistance from a UN agency other than UNHCR. In today’s context, this applies to certain groups of Palestinian refugees who are inside the area of operations of the *United Nations Relief and Works Agency for Palestinian Refugees in the Near East (UNRWA)*.
- ii. Persons who are not in need of international refugee protection* because they have taken up regular or permanent residence in a country that has given them a status whereby they effectively enjoy the same rights and have the same obligations as nationals of that country.
- iii. Persons who are considered undeserving of international refugee protection* on account of them having committed certain serious crimes or heinous acts. This applies to persons who are responsible for **war crimes** (i.e. serious violations of the laws or customs of war), **crimes against humanity** (i.e. inhumane acts when committed as part of a widespread or systematic attack directed against the civilian population) or **crimes against peace** (i.e. planning, preparation, initiation, or waging of a war that is in violation of international treaties). Similarly, those who have committed **serious non-political crimes** (e.g. murder, rape) prior to entering the country of asylum or acted against the purposes and principles of the United Nations cannot benefit from refugee status.

38. Exclusion assessments should be carried out by persons qualified and trained to do so. Any recommendation to exclude an asylum-seeker in an emergency should be reviewed and endorsed by a Regional Legal Adviser at Headquarters. **People can be recognized as refugees on a *prima facie* basis as a group, but can only be excluded from refugee protection on an individual basis.** Once excluded, they would not be of concern to UNHCR. However, human rights NGOs and the High Commissioner for Human Rights would advocate for the State to respect their human rights, including the right not to be *refouled* to a territory where their life or liberty would be at risk.

Complementary and temporary protection

Complementary protection

39. Some countries adopt a narrow definition of the term “refugee” which does not encompass those persons who are fleeing from armed conflict or generalised violence. Instead, they often establish ‘*complementary forms of protection*’ as a pragmatic response for individuals in need of international protection but do not meet the refugee definition under the *1951 Convention* or the *1967 Protocol*. These countries are bound by relevant international treaty obligations prohibiting *refoulement*, such as those deriving from Article 3 of the *Convention against Torture* or Article 7 of the *International Covenant on Civil and Political Rights* as well as in regional human rights instruments.

40. Although persons granted complementary protection do not have access to the full range of benefits given to refugees, UNHCR encourages States to provide for the highest degree of stability and certainty to them (almost the same rights as refugees). Those with complementary protection should enjoy, without discrimination, the human rights and fundamental freedoms laid down in relevant international instruments, including the princi-

ples of *non-refoulement*, the ‘best interests’ of the child and family unity.

Temporary protection

41. Temporary protection is a specific provisional protection response to situations of mass influx, providing immediate emergency protection from *refoulement*, and postponing formal refugee status determination until it is practically feasible. Often this response is provided in situations where there are good prospects of voluntary repatriation in the near future. UNHCR does not encourage States to resort to this measure when it is feasible to recognize them on a *prima facie* basis. The rights of persons granted temporary protection are similar to those of recognized refugees. In any case, these shall include:

- i. admission to the country of refuge;
- ii. respect for human rights, with treatment in accordance with internationally recognized humanitarian standards; and
- iii. protection against *refoulement*.

Combatants at the border

42. When people flee areas affected by armed conflict or political unrest marked by serious human-rights offences, it may happen that combatants arrive in the country of asylum (or the safe areas or camps in the case of the internally displaced) along with the civilian population. A combatant is a member of regular or irregular forces, who has or is taking an active part, directly or indirectly, in an armed conflict. The presumption of refugee status, including recognition on a *prima facie* basis, (or recognition as an internally displaced person of concern to UNHCR) does not apply to combatants, as this would threaten the civilian and humanitarian character of camps, settlements and asylum.

43. International Humanitarian Law would govern the treatment of combat-

ants arriving in a country that is **party to the conflict** and ICRC would be best placed to monitor and advise in such situations. The law of neutrality, in particular the 1907 *Hague Convention Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land* and Executive Committee Conclusion 94 (of 2002) relating to the *Civilian and Humanitarian Character of Asylum* would govern the treatment of combatants arriving at in **country neutral to the conflict**.

44. In a neutral country, combatants should be, as far as possible, identified at the border. They should be disarmed, separated and held in an internment facility. ICRC is mandated to visit and monitor these internment facilities. An influx may also contain armed elements who are not combatants, but civilians carrying weapons for reasons of self-defence or hunting purposes. While such persons must be disarmed, they would not need to be separated or interned.

45. Combatants should not be considered as asylum-seekers (or ‘persons of concern’) until it has been established, within a reasonable time frame – often after a period of internment -- that they have genuinely and permanently renounced military activities (in practice, this has ranged from between three months up to a year or more). They may thereafter be admitted into asylum procedures. The asylum applications of former combatants should be examined through individual refugee status determination procedures, which should provide for a thorough examination of the possible application of the exclusion clauses. They can then be allowed to integrate with a civilian population as long as they are not at risk of facing protection problems from the community. There may be situations where internment may not be necessary or feasible.

46. Persons who claim to have given up their combatant status and who have requested for asylum may sometimes be at

a risk of being *refouled* prior or during their internment period. In such situations, UNHCR should advocate for States not to *refoule* them and if necessary, on an urgent basis, determine whether they have genuinely given up their combatant status and whether they are refugees or not. Human rights NGOs and the Office of the High Commissioner for Human Rights, if present, would also normally advocate against their *refoulement*.

Child soldiers, on the other hand, need to be disarmed and assisted in reintegrating within the civilian refugee community as far as possible

47. The State is responsible for dealing with combatants who arrive at their border or who enter their territory. UNHCR should only support the government by providing advice, by helping the authorities in establishing systems by which combatants can be identified, disarmed, separated and interned. UNHCR does not have the mandate or the expertise to actively identify, disarm or intern any combatant.

Specific protection issues

48. UNHCR, governments and other partners should ensure that persons that have access to safe territory (the country of asylum in the case of refugees; other safe areas in the case of the internally displaced) continue to remain protected and that their human rights are respected. They should be able to live in an environment that promotes safety, dignity, and self-sufficiency when they are uprooted. Below are some specific issues that often arise during emergencies.

Refugee protection encompasses measures to ensure that people of concern enjoy, on an equal basis, *legal security* (that they are not discriminated against; that they have a legal status and documentation) *physical security* (that they are protected against physical harm) and *material security* (that they have equal access to basic goods and services).

Understanding the concerns of uprooted people

49. To be able to provide the right protection response in an emergency there is a need to understand the people who we are working for and what their concerns are. Involving women, men, girls and boys of all ages and different ethnic and religious groups of concern to UNHCR from the start will ensure better understanding of their problems and also build trust between UNHCR and the people of concern. (read more on Community-Based Approach in chapter 11)

50. By undertaking an initial participatory assessment (see chapter 5 for more information on Initial Participatory Assessment), UNHCR and its partners can, in systematic and rigorous way, collect information with the active participation of the community and thereby gain a better understanding of issues concerning their protection and well-being. This is a crucial step in understanding, developing and implementing any protection strategy – including on issues such as access to asylum, camp planning, distribution of assistance, provision of services including education and health, physical security including SGBV and even durable solutions. Participatory assessment should be an activity jointly undertaken by multi-functional teams comprised of staff from UNHCR and other UN agencies, NGOs and the government.

51. Sources of information must be developed and direct communication with refugees through participatory approaches established in the field to ensure that

UNHCR is quickly informed of any new influx or protection problem. This information should be systemized and used for defining protection strategies and the emergency assistance response. Such open lines of communication, including those with local authorities are important in particular for border regions which are remote from the capital, and where UNHCR may not yet have a local presence.

52. Sources of information in addition to refugees and others of concern include:

- i. Local or central government authorities (including military officials)
- ii. Community and religious leaders
- iii. Host community
- iv. National and international NGOs
- v. ICRC
- vi. Other UN and international organizations
- vii. National (particularly local language) and international news media

53. If possible the central authorities should participate in fact-finding missions, as this reduces the risk of misunderstanding between UNHCR and the central authorities and between the central and local authorities.

Analysing, monitoring, reporting and intervening

UNHCR's Statute and Article 35 of the 1951 Convention provides UNHCR with the authority to monitor and assist States in their fulfilling obligation to protect refugees and others of concern to the agency.

54. UNHCR and its partners must monitor any emergency situation at all times – often by being physically present at borders, camps and other affected areas - not least to ensure that the rights of asylum-seekers, refugees, the internally displaced are respected.

55. Immediate, clear and regular reports of developments, action taken and intended to be taken are important, whether from

the Field Officer to the Head of Office or from the latter to Headquarters. Guidance must be requested as necessary and Headquarters level interventions recommended as appropriate. See chapter 8 on implementing arrangements, for a standard situation report.

Unless information gathered locally is done systematically, and unless it is shared appropriately, its usefulness is limited.

56. Intervention with governments, partners and other stakeholders can take many forms and depends on the specific situation at hand. Prerequisites for intervention with government authorities, partners or other stakeholders are accurate and regular situational analysis, reporting to the appropriate channels and if necessary, seeking advice from UNHCR colleagues in the country, region or headquarters. Among other options, UNHCR can intervene by:

- i. **Advocating for and promoting** principles of international protection and UNHCR's mandate through meetings, trainings and correspondence, not least to ensure that States apply these principles in protecting persons of concern to UNHCR. Individual cases may also be raised as part of UNHCR's advocacy role. UNHCR may advocate for refugees and others of concern in a public forum. However, before doing so, staff should be aware of any potential negative consequences (see chapter 9 on working with the media for further information).
- ii. **Building the short, medium and long-term capacity of States and partners** to offer protection. This may include enhancing the knowledge, skills and attitudes of governments through dialogue and training, assisting them in developing their legislation, providing them with material support (including, if necessary, building basic infra-

structure such as schools for refugees, providing furniture and stationary to authorities etc). When providing material support during an emergency, not only does UNHCR require the appropriate funding, but should provide this support only if it is essential and if no other responsible agency is able to do so (for instance, UN development agencies) and ensure that States do not become dependent on this support in the medium and long-term.

- iii. Providing **services** (food, clothing, shelter material, education and health services, for example) to persons of concern that States would normally be obliged to provide.

57. Situational analysis can be undertaken using a variety of tools, not least using the results of a participatory assessment process (see chapter 5 on initial participatory assessment) as well as using the *Protection Gaps Framework of Analysis Tool* developed by UNHCR that can be adapted to an emergency situation.

Protection through assistance

58. Ensuring protection and providing humanitarian assistance are not two separate issues. Rather, humanitarian assistance is an integral part of protection and should be planned to ensure that the rights of refugees and others of concern are respected (right to life, right to adequate living conditions, protection of specific categories of people such as older persons, unaccompanied and separated children, single parents, survivors of SGBV etc.) and as part of a single emergency operation.

59. Women, men, girls and boys of concern must be consulted and involved in planning humanitarian interventions as soon and as frequently as possible from the very beginning of the emergency. Their roles in the community should also be understood. Often, especially at the beginning of an emergency, older persons, persons with disabilities, unaccompanied

and separated children, and some single parents are less able to access food, shelter material, health care and other humanitarian assistance with ease. Specific efforts must be made to identify the obstacles as early as possible and ensure that the groups have equal access and are being supported by the community. Furthermore, sexual exploitation by aid workers and other refugees has, sometimes, been linked to the provision of humanitarian assistance. Women, girls and boys of concern especially have been exploited by aid workers or other refugees who are in a position to provide them with essential items such as food, shelter, education and medical care or by persons in positions of authority, such as border guards. In accordance with the UNHCR *Code of Conduct*, UNHCR and its partners should ensure that mechanisms are in place from the very outset to prevent exploitation from occurring during and after emergencies. (Please refer to the IASC gender mainstreaming handbook for further guidance and the SG bulletin on Special measures for protection from sexual exploitation and sexual abuse 9 October 2003).

60. In most emergencies in developing countries, it is necessary to indicate that the granting of asylum and meeting of immediate needs will not be a significant financial burden on local authorities. UNHCR staff must receive early guidance on the extent to which commitments on humanitarian assistance may be given by UNHCR and its partners, in order to communicate this information with local authorities (see chapter 6 on Operations). If the influx consists of additional asylum-seekers clearly belonging to a group already assisted by UNHCR, a firm assurance of humanitarian assistance, within the means available, is usually given.

Children

Child: a person below the age of 18 years, unless, under the law applicable to the child, majority is attained earlier (cited from *The Convention on the Rights of the Child, article 1*).

61. Girls and boys often constitute 50% or more of the population in an emergency operation. It is essential to work with them separately and with their parents/guardians to understand and address their specific needs at all times. Children, adolescent girls and boys in particular should be consulted at all times, even when planning the camp structure such as schools, latrines and other facilities, and when implementing, monitoring and evaluating programmes that affect them.

62. UNHCR's publication *Refugee Children: Guidelines on Protection and Care* (see key references) is essential reading for those designing a protection intervention in emergencies. Particular attention must be placed on the risks faced by adolescent girls, such as lack of access to education, forced labour, early marriage and prostitution.

Protection of women and girls ¹

63. Women do have specific needs which, if not met, can put them at risk, such as exposure to exploitation and sexual abuse, sexual discrimination and restricted access to humanitarian assistance. Not including refugee women in planning, decision-making, implementing or evaluating projects that affect them may put them at further risk. In addition, the effectiveness of the assistance programme may be reduced because the problems and needs of all the beneficiaries have not been properly identified.

¹ Please also see *UNHCR handbook on the Protection of Women and Girls, 2006*.

64. However, when seeking women's participation in decision-making, measures which challenge the *status quo* may be threatening to traditional leaders. Special efforts may be needed to overcome resistance to change (see chapter 11 for more information on women's participation and empowerment in emergencies)

65. Identifying women and girls at risk in any given situation requires identifying the "risk factors" that threaten their rights. These factors can be present in the wider protection environment and/or result from the individual's particular circumstances.

Among the risk factors in the wider protection environment that can arise as a result of, and after, women and girls flee their homes are:

- **security problems threatening or exposing them to SGBV or other forms of violence**, particularly when such dangers arise from inadequate housing, the need to collect fuel and water and to tend to crops/animals, or, in urban settings as a result of isolation, problems with housing/landlords, or because displaced children are living on the streets;
- **problems accessing and enjoying assistance and services**, resulting from inadequate food and/or material assistance; inadequate access to health care, especially given their sexual and reproductive roles and disproportionate vulnerability to HIV/AIDS; lack of access to, or unsafe or poor educational opportunities; child labour; abuse by those in positions of authority controlling access to assistance and services; lack of livelihood or income-generating opportunities;
- the **position of women and girls in society**, which results in discrimination against them; marginalization; camp management, community, and leadership structures that do not sufficiently include them; unequal gender

and power relations; changes in gender roles; continuing harmful practices; the breakdown of family, community structures, and values;

- **legal systems that do not adequately uphold their rights**, including justice systems that do not fully address harmful traditional practices or domestic violence or that restrict their rights to marriage and divorce and to property and inheritance; traditional justice systems that do not respect international norms; national registration systems that do not provide refugee or asylum-seeking women with individual documentation; asylum systems that are not sensitive to the needs and claims of female asylum-seekers;
- **protection systems that do not uphold their rights**, because refugee and asylum-seeking women and girls are not individually registered; disaggregated data on displaced women and girls are not available; systems to identify, monitor, and support women and girls at risk are inadequate and slow to respond; there are insufficient numbers of female and international staff or female law enforcement officers present; a lack of awareness about women's and girls' rights; reporting systems are not clear; relations between staff and displaced communities need strengthening; monitoring of unaccompanied and separated girls and other women with specific needs is weak.

66. These more general factors may be combined with individual risk factors. They can be grouped as relating to:

- their **status or situation in society**, including as women who are alone, are single heads-of-household including grandmothers, in mixed and/or polygamous marriages, or are without documentation; as widows without family support; as girls, including adolescents, who are unaccompanied or separated, heads-of-household or out of school; as

women and girls who challenge social norms, are stateless, are without access to assistance or in detention;

- **their exposure, or risk of exposure, to SGBV or other forms of violence**, including rape, torture, other serious physical harm, domestic violence, abduction, trafficking, female genital mutilation, early or forced marriage, forced contraception, abortion or sterilization, maltreatment by foster families or relatives, forced recruitment by armed factions, whether as (child) combatants or sex and labour slaves;
- **additional health care or other support**, because they are physically or mentally disabled, traumatized, pregnant or teenage mothers, affected by HIV/AIDS or suffering from medical conditions particular to their sex or gender.

67. In certain cases, the presence of one factor alone may be sufficient to require an urgent protection intervention. In others, the presence of a combination of individual and wider-environment factors will result in heightened protection risks for displaced and returnee women and girls. In still other cases, if women and girls have been subjected to SGBV in the place of origin or during flight, they may be at heightened risk in the area of displacement. Finally, threat levels may change and may thereby expose women and girls to heightened (or reduced) risk, for example during the crisis or emergency phase or if the situation becomes protracted.

68. Responding more effectively to these protection problems requires a holistic approach that combines preventive strategies and individual responses. It involves collaboration among, and the involvement of, all relevant actors, and should include working with men and boys to understand and promote respect for the rights of displaced and returnee women and girls.

69. Strategies to prevent protection risks from arising in the wider environment include actions to identify, assess, and monitor the wider protection environment, establish and strengthen secure environments, and empower displaced and returnee women and girls.

70. Responses to individual women and girls at risk can be grouped under three themes, which are listed non-exhaustively below.

Identification and immediate response involves:

- working in partnership with states and partners to establish mechanisms, based on the wider protection environment and individual risk factors outlined above, to identify individual women and girls at risk, determine and implement appropriate immediate responses and subsequent solutions;
- providing women and girls at risk with information, counselling, and medical and psychosocial care;
- providing women and girls facing domestic violence and abuse or attack by other members of the community with access to safe houses, especially if there are no mechanisms to remove perpetrators; offering them emergency voluntary relocation to another town or camp, or emergency resettlement;
- determining the best interests of girls at risk and providing alternative accommodation, physical protection, and interim foster care, as required;
- initiating family tracing and ensuring family reunification for separated and unaccompanied girls so that they can rejoin their families wherever possible and in their best interests.
- ensuring that refugee status determination procedures, whether carried out by States or, if necessary, by UNHCR provide female asylum-seekers with access to gender-sensitive procedures, and that

decisions recognize gender-related forms of persecution in the context of the refugee definition as constituting grounds for refugee status.

Physical safety of refugees

71. Ensuring the physical security of refugees is an essential part of all emergency operations. Uprooted people must be allowed to live in an environment that ensures their human right to life, liberty and security. Under refugee and human rights law, a host state is obliged to ensure the physical protection of those who reside within its borders, including refugees and others of concern to UNHCR.

72. Once they have gained access to safe territory (a country of asylum for instance), ensuring the physical security of refugees and others of concern entails securing their areas of residence and taking steps to prevent their safety from being compromised. It also requires that the living environment of refugees should be peaceful, humanitarian and civilian, free of violence and criminal activity, and conducive to the realization of human dignity.

73. Threats to the physical security of refugees may stem from a variety of causes, including organized armed criminals, errant military and police, non-state armed actors, anxious local populations and other refugees themselves. Women, men, girls and boys often have different security concerns, including in relation to SGBV, that need to be identified and addressed accordingly.

Location of refugees

74. Asylum-seekers and refugees should be located at a reasonable distance from the frontier of their country of origin to ensure their safety and well-being. The internally displaced should be located in safe areas and a safe distance away from conflict areas.

75. Camps for refugees and the internally displaced are often established for security reasons and to ensure that humanitarian agencies can easily monitor the situation and deliver humanitarian assistance. However, camps may not always offer better protection to refugees and the internally displaced – they can often be detrimental for their security. Sometimes, it may be more effective and safe if they are allowed to live with local communities in villages and semi-urban areas that share cultural and other ties with them. This would also promote self-reliance within the uprooted community. However such measures require the willingness and consent of the host government and the host communities themselves.

76. In either situation, the environment where the refugees or the internally displaced live should ensure that they are able to exercise their human rights to the greatest possible extent. As the internally displaced are citizens in their own country, they should not be forcibly restricted to ‘camps’ and they should have the freedom to move in and out of camps if such camps are established for their benefit.

Camp security

77. The closed environment of camps is particularly conducive to exploitative and manipulative activities by people who seek to gain from the vulnerable nature of the residents – especially during an emergency. The specific nature of threats to the security of refugees and the internally displaced in camps may take a number of forms such as theft, assault, domestic violence, forced marriage, cattle rustling, vandalism and civil disputes; child abuse, rape and other sexual forms of sexual and gender-based violence, robbery (armed and otherwise); arson, fraud, forgery, aggravated assault, murder, forced prostitution, kidnapping, human trafficking, smuggling of people and arms, forcible recruitment into armed forces, extortion,

enslavement, torture, war crimes, and withholding humanitarian assistance.

78. All efforts must be made by the host country to maintain law and order within the camp including the prevention of sexual and gender-based violence, curtail the flow of arms into refugee camps, prevent the forcible recruitment of refugees into armed groups as well as disarming armed elements and identifying, separating and interning combatants. Often, however, States need considerable support and technical assistance, not least by humanitarian agencies, to successfully undertake these activities.

The security aspect of camps should be considered during the initial stages of site selection and physical planning; the neutrality of camps should never be taken for granted (see chapter 12 on site selection and planning).

79. In situations where a host state is unable or unwilling to ensure the physical security of refugees the international community may be obliged to step in. The ‘*Ladder of Options*’ concept provides a matrix of refugee insecurity and proposes responses through the use of soft, medium and hard approaches (or options) to refugee security. Depending on the security situation and the extent to which the government is unwilling or unable to involve itself in providing safe asylum.

Ladder of options

- **Soft approach:** involves preventative measures, where international organizations provide support to the host state to maintain security within refugee-populated areas.
- **Medium approach:** involves the use of international civilian or police monitors who provide technical expertise and support for local authorities, through training, mentoring and monitoring.
- **Hard approach:** involves the direct use of international military forces, whether peace-keeping or peace-building, to maintain security in refugee populated areas. This last resort is exceptional in nature, requires UN Security Council authorization, and can compromise the humanitarian nature of assistance work.

Judicial systems and detention

80. Even during an emergency, UNHCR and its partners should work towards ensuring that the national legal system -- including law enforcement and courts of law -- cater to the needs of refugees and other persons of concern. Complaints by refugees should be registered by the police, proper investigations should be conducted and principles of due process should be followed. It may be necessary to ensure that refugees and others of concern have physical access to these mechanisms, so that they are aware of how to use these systems and sensitize the police and judiciary in responding to cases brought by or brought against refugees and the internally displaced. It may even be necessary to provide some basic support to the courts and police so that they can function effectively and promote gender balance. However, it is important to ensure that in all cases, the victims of these offences (such as survivors of rape) are not ‘forced’ to use these systems, but rather provided with the information and access to these systems so that they can make an informed choice.

81. Refugees and others of concern often resort to using traditional mechanisms of ‘justice’ (traditional courts for instance) that are run by their community to address a range of issues from petty theft to physical assault rape and murder. While sometimes these mechanisms may be effective (even more effective than national legal systems), they often do not follow principles of due process often resulting in violations of human rights of refugees and others of concern. Issues relating to women and children (such as rape) are often not represented or addressed properly (the woman or girl can be forced to marry her rapist for instance). Furthermore, the adjudicators may often only be men or not truly representational of the community. For this reason, among others, it is important that traditional mechanisms do not deal with serious offences (such as rape, murder, physical assault) but refer such cases to more formal systems of justice. While it is important to work with the community and traditional mechanisms, it is also essential to agree on what issues they can and cannot address through these mechanisms to ensure individual human rights are respected. A person should not be prevented from accessing the formal national legal system either before, during or after the matter is heard by the traditional court.

82. Asylum-seekers, refugees and the internally displaced are often detained for a number of reasons. UNHCR should work to ensure that they are not detained for entering the country illegally (pursuant to Article 31 of the *1951 Convention*). UNHCR should also sensitize the authorities not to prosecute or convict refugees if they violate rules that place unreasonable restrictions on their freedom of movement, right to work and other human rights. Further, refugees or the internally displaced that are convicted and imprisoned for criminal offences remain of concern to UNHCR and their conditions should be monitored regularly.

Physical safety in areas of conflict

83. International humanitarian law provides protection to civilians including refugees in situations of armed conflict. In non-international conflicts (i.e. internal armed conflict but not police operation), all parties to the conflict are bound by common Article 3 of the *1949 Geneva Conventions* and the *Second Additional Protocol* to respect all persons not taking an active part in the hostilities, and in particular:

- i. to treat them humanely and without distinction as to race, religion, sex, birth, wealth or any other similar criteria;
- ii. to refrain from violence to life and person;
- iii. not to take hostages;
- iv. to respect personal dignity;
- v. not to pass sentences or carry out executions without due process of law; and
- vi. to collect and care for the wounded and sick.

84. The International Committee of the Red Cross (ICRC) is the agency charged with supervising the implementation of international humanitarian law in situations of armed conflict. In most situations of armed conflict or civil strife, the ICRC offers its services to all parties to assist victims and ensure the protection of civilian populations – including, where applicable, refugees and other displaced populations – as well as detained combatants.

85. UNHCR staff should seek the cooperation of the ICRC, wherever it is present, and benefit from its expertise in dealing with state and non-state parties alike in situations of armed conflict.

Operations in areas controlled by non-state entities

86. In situations of civil strife or internal armed conflict, particular difficulties may arise from the fact that UNHCR’s interlocutors are not States or regular armed

forces answerable to States, but insurgent groups and other non-state entities. UNHCR may have no choice but to deal with these groups as they exercise *de facto* control over a refugee population or the internally displaced. Such non-state entities might be very organized to the point of having established various ‘ministries’, ‘administrative departments’ and even ‘courts of law’. In an emergency, UNHCR should respect these systems to ensure the protection of refugees, the internally displaced and the humanitarian workers themselves.

87. In other situations, non-state actors may be less organized, in which case it may be necessary for UNHCR to build and maintain working relations with specific individuals or groups who can ensure the protection of persons of concern to UNHCR.

88. In all situations, it is important to highlight the impartial, non-political and humanitarian role of UNHCR and to exercise public pressure in order to convince these groups of the importance of adhering to international humanitarian and refugee law. Similar to building the capacity of States, it may be necessary to build the capacity of the non-state actors so that they respect international protection standards, in particular the rights of women and children; training, awareness raising and other activities could help in this regard. Yet, when dealing with these groups, UNHCR should not imply, through any of its actions or correspondence, a formal recognition of these non-state entities by the United Nations.

Forced recruitment

89. Refugees and the internally displaced that live in or near a conflict zone are often at risk of forcible recruitment by one or more parties (State or non-state) to the conflict. Men, boys and girls may be forcibly recruited to take up arms or undertake jobs such as portering, cooking and

cleaning. Women and girls may even be abducted and forced into sexual slavery by these armed groups.

90. Forcible recruitment can take place anywhere and anytime – especially in schools, marketplaces, youth and community centres and the homes of refugee families. Children living near areas of armed conflict, those not attending schools, particularly adolescents; unaccompanied or separated children and children from disadvantaged or marginalized parts of society are more susceptible to being forcibly recruited. While refugees and the internally displaced are often coerced into joining armed forces, sometimes, families and leaders have been known to willingly ‘volunteer’ their children and other members of the community to join these forces. Specific measures must be taken to monitor them and ensure that they are not forcibly recruited, including **sensitizing** women, men girls and boys of this risk, **monitoring** areas where recruitment can take place, establishing **community-based mechanisms** in schools to prevent recruitment from occurring and even ensuring a police presence if necessary.

91. In confronting this issue, UNHCR staff must remember – and remind the authorities – that:

- i. The civilian and humanitarian character of refugee camps and settlements must be preserved and respected in all circumstances. Therefore recruitment of any age group for military and paramilitary purposes is unacceptable.
- ii. Recruitment by force may amount to cruel, inhuman or degrading treatment, which is prohibited in all circumstances.
- iii. Recruitment and direct participation in hostilities of children less than 15 years old is considered a war crime. Children under 18 should not be involved in hostilities.
- iv. Where refugees are forced or coerced to return to their country of origin to

fight, this is tantamount to *refoulement*, which is prohibited in all circumstances.

92. Annex 2 provides some activities and measures that can be taken by governments with the support of UNHCR and other humanitarian agencies to ensure the physical protection of camps. Particular attention must be given to the possibility of young men, girls and boys – especially those with little parental guidance or supervision -- who are more susceptible to forcible recruitment during emergencies.

Combatants in camps

93. The presence of combatants in refugee camps or settlements can lead to a general breakdown in law and order, forced military recruitment, an increase in rape and other forms of physical and sexual abuse, human trafficking, political manipulation, and the diversion of humanitarian assistance for non-humanitarian activities. It can also make refugees vulnerable to attacks from across the border. Host government may even adopt a more hostile position towards refugees as it may affect the national security and even regional stability, as well as threaten inter-state relations. As a result, refugees may be even be subject to *refoulement*.

94. Combatants placed *hors de combat* (sick, wounded, shipwrecked and prisoners of war) residing in a country that is party to the conflict are primarily protected by international humanitarian law, and fall under the competence of the State and the ICRC. Combatants who are residing in a neutral country are protected by the law of neutrality in particular, the 1907 *Hague Convention Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land*. Executive Committee Conclusion 94 (of 2002) relating to the *Civilian and Humanitarian Character of Asylum* provides guidance in such situations and emphasizes the responsibility of States in this matter.

95. Continuous efforts need to be made by State authorities to monitor camps and settlements to determine if combatants are residing in the camp. These efforts should not place other refugees or the internally displaced at risk (i.e. by getting camp residents, especially children, to identify others who may be combatants). Humanitarian workers should also not place themselves at risk by actively identifying combatants. Information received by UNHCR should be passed on to the relevant State authorities for appropriate action.

96. Similar to combatants identified at the border, combatants who are residing in the host country need to be identified, disarmed, separated, and interned with separate arrangements for women and men. Their treatment in the internment facility and their status will be similar to combatants identified at the border. Child soldiers also need to be treated differently. The primary responsibility for this lies with the host country, while international agencies such as UNHCR may offer support and advice.

Sexual and gender-based violence (SGBV)²

Sexual and gender-based violence (SGBV) refers to a range of actions by which an individual is exploited because of her/his sex or gender. This includes physical, emotional, psychological and socio-economic abuse such as rape, female genital mutilation, domestic violence, forced marriage, exploitation, threats, confiscation of money or identity cards, and restrictions on freedom of movement and liberty.

97. SGBV often occurs in situations where people can abuse the power they exercise over others, such as:

- *When people are caught in armed conflict:* rape and other forms of sexual abuse are widely used as weapons of war to humiliate the enemy.

² Please see chapter 18 for more guidance on how to deal with SGBV in an emergency.

- *When people flee persecution and armed conflict:* refugees and the internally displaced are at risk of sexual abuse or rape during flight when they are smuggled or trafficked. Because uprooted people often do not have identity documents, money, or access to justice, those with authority may take advantage of the situation and exploit them.
 - *In the family and the community:* rape, including within marriage (marital rape), forced early marriage, sexual abuse, female genital mutilation (FGM), sexual harassment, trafficking of women, and forced prostitution are some types of SGBV that can occur in a family or in the community.
 - *In the daily lives of asylum-seekers, refugees, the internally displaced and returnees:* SGBV can occur in the workplace, at border check-points, in detention centres and prisons, in educational institutions, classrooms, health centres, places where assistance and/or documentation is provided, areas for firewood or water collection outside a camp, and at latrines located in poorly designed camp settings.
98. Survivors of SGBV usually need one or more of the following responses:
- i. Medical attention:** A survivor of rape needs to see a doctor within 72 hours to receive treatment, which may include prevention of unwanted pregnancy and HIV infection.
 - ii. Psycho-social support:** A survivor may be traumatized and will require emotional and social support, which includes a non-blaming and supportive attitude from the immediate family.
 - iii. Legal counselling:** Most forms of SGBV are punishable crimes under relevant national law. If a survivors wishes, s/he should be supported in reporting the case to the police and prosecuting the perpetrator(s).
- iv. Physical security:** Survivors may be threatened with retaliation for reporting cases and therefore need a safe place to stay. In some situations, re-settling them to another country is one way of protecting them.
99. Whenever assisting survivors of SGBV, always respect the confidentiality of the survivor. Furthermore, provide all the relevant information to the individual so that s/he can decide what s/he wishes to do³.
- Humanitarian evacuation and ‘safe havens’**
100. In extreme situations, refugees and others of concern to UNHCR may no longer be able to find safety either in the country of asylum or, in the case of the internally displaced, in the country of origin. For instance, the country of asylum may be involved in a conflict itself because of which it is no longer able to protect refugees. Armed groups may resort to ethnic cleansing or genocide that target persons of concern to UNHCR including the internally displaced.
101. In such situations, the possibility of evacuating refugees and the internally displaced to another safer country (or countries) may be the only way to ensure their protection (as a measure of last resort). Such moves are quite different from large-scale resettlement as a durable solution. Immediate approaches to potential countries of asylum must be made at local, embassy, and Headquarters levels. Receipt of resettlement offers may have an important influence on the government’s attitude towards the refugees. Operational partners must be identified. In addition to locally-based NGOs, the assistance of the ICRC (for example, with travel documents) and the International Organization for Migration (IOM) may be sought.

³ Please refer to UNHCR’s *Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response*.

102. UNHCR must advocate that these safe countries are able to ensure the protection of these uprooted people (for instance, they must have a legal identity, their physical protection, including protection against *refoulement* must be ensured and that they have access to proper living conditions. Chapter xx discusses the importance of the family unity and evacuation of children on their own.

103. In extreme and tense situations where the lives of refugees and the internally displaced were threatened, “safe havens” were established in the country for them. However, UNHCR’s experience with “safe havens” demonstrated that refugees often could not be provided with adequate protection and continued to be exposed to high risks. It is therefore not recommended to formally establish “safe havens”.

Groups with specific needs⁴

Unaccompanied and separated children

Families are easily and often separated when fleeing war, violence and persecution. Girls and boys who have been separated from their parents are at risk of being abused and exploited and even their very survival may be threatened. They can also face serious challenges in accessing quality care and assistance. This is why unaccompanied and separated children need to be given special attention.

104. At all times, UNHCR and its partners should ensure that:

- i. unaccompanied and separated children are identified as early as possible – when they enter the country or even when they are in the camps;
- ii. all children should be individually registered and provided with individual documentation as soon as possible;

- iii. information that will help to meet the specific needs of the child, including tracing, and to make plans for the future is recorded;
- iv. family members should be traced as soon as possible; and
- v. effective monitoring of all unaccompanied and separated children takes place.

105. During the time they remain separated from their families, including the initial stages of an emergency, children must be able to live in a safe environment where they are properly cared for and protected. Children may need counselling to deal with the trauma that they have faced. It is important that siblings remain together. Specific attention is given to child-headed households. UNHCR and its partners should carefully and continuously monitor these care arrangements to ensure that the **best interests of the child** are respected. (See chapter 11 for more information on protecting unaccompanied and separated children in an emergency operation).

Child soldiers

‘Child soldier’ refers to any person under 18 years old who is part of any kind of regular or irregular armed force or armed group in any capacity, including but not limited to cooks, porters, messengers, and those accompanying such groups, other than purely as family members. It includes girls recruited for sexual purposes and forced marriage. It does not, therefore, only refer to a child who is carrying or has carried arms.⁵

Child recruitment encompasses compulsory, forced and ‘voluntary’ recruitment of children into any kind of regular or irregular armed force or armed group.

Demobilisation means the formal and controlled discharge of child soldiers from the army or from an armed group.

⁴ Please see chapter 11 for more information on groups/persons with specific needs.

⁵ Cape Town Principles and Best Practices on the Recruitment of Children into the Armed Forces and on Demobilization and Social Reintegration of Child Soldiers in Africa, 1997.

106. Governments and humanitarian agencies should take all measures to ensure that forced recruitment, especially in emergencies located close to armed conflict, are prevented.

107. During emergencies, child soldiers or former child soldiers may also enter the country of asylum with refugees or reside in camps with the civilian population. They may have escaped from or been abandoned by the armed force or group, or may have been sent back by the armed group. Upon their return, they may be ostracized by the community for having participated in armed activities. They may also be at risk from the armed forces or groups themselves, who sometimes forcibly recruit them again.

108. Unlike adult combatants, they should not be separated and interned. Rather, after they are disarmed, they should be enrolled into programmes that will rehabilitate and reintegrate them back into society. They may also need specific medical care as well as psycho-social support and counselling. Often, teenage girls may return pregnant or with young children and will require specific support and longer-term solutions. Education and vocational training, reunification with family members, and the children's own participation in decisions that affect them would all contribute towards this effort. The community must be sensitized and involved in this process. These rehabilitation and reintegration programmes – which should be part of wider effort to support the war affected communities – may be necessary at the very beginning of emergencies especially when there are a number of child soldiers who arrive at the border or who are residing in camps.

109. **Single parent households:** Emergencies may see a large number of **single-parent households** – while most of them are female-headed, there can also be male-headed households. These parents have to manage the family needs on their own

and may be at risk as they are exposed to exploitation and harassment, especially if they are young. Their children too could be at risk of abuse and exploitation as these parents may not be able to supervise the children constantly. (Grandparent-headed households have particular problems as they often become dependent on very young children for their survival).

110. **Older persons:** can constitute a significant proportion of the refugee population although they are often overlooked. Older persons, who often have been immersed in their own culture and practices for many years, may find it particularly hard to adjust to a changing environment. With displacement, older persons' sources of power -- such as control of land, resolution of disputes, systems of respect are likely to be fundamentally undermined leading to risk of exclusion from participation and decision-making. Also, physical deterioration may limit their mobility and hence their access to basic services. Particular attention should be given to older persons who are caregivers or are living alone. Assistance criteria must consider their specific requirements.

111. **Persons with physical and mental disabilities**

Persons with disabilities might have problems in accessing humanitarian assistance that is made available to refugees. Steps must be taken to ensure this access, including that of children with disabilities, to whatever schooling is available. In some refugee situations, but more often in returnee situations, additional dangers of land-mines mean that an information campaign must be started immediately to prevent further disability. Their physical protection is also a cause for concern and they can be at risk of SGBV and require careful monitoring (see chapter 11 for more information on the protection of disabled persons in emergencies).

112. *Victims of violence, torture and trauma*: Men and women of all ages fleeing conflict areas often include victims of violence or torture – including detention, severe beatings, rape and mutilation of the body. Specific attention must be given to ensure that their physical and psychological needs are addressed during an emergency, possibly by the community itself. They must have access to humanitarian assistance and counselling from an early stage and in mass influx situations community-based response mechanisms, which respect individual rights, should be supported (see chapter 18 for more information on the protection of victims of violence in emergencies).

Partnership in emergencies **Working with host governments** **(including the military)**

113. At both the local and central level, UNHCR must ensure that it has access at all times to those officials whose decisions will affect the refugees' situation. Establish who they are, contact them and if possible request home telephone numbers and other means of communication so that if a protection problem arises it can be brought to the right official's attention at once. *Refoulement* and other protection problems can often take place very rapidly.

114. Local authorities should be kept informed of demarches UNHCR has made or intends to make in the capital – these should not only be the demarches of a political or formal nature, but also those covering practical aspects of the programme.

115. Often, it may be necessary to approach the most senior local official directly responsible for the situation. In some cases this may be the local military commander for a region. The military (both national and international forces) can be an important partner in, among other things, providing information, delivering humanitarian assistance and ensuring the

security of operations (see chapter 27 on working with the military).

116. Any temporary or *ad hoc* agreements with the authorities should be formalized, such as agreements relating to UNHCR presence in the local areas. Reference should be made to protection and durable solutions in any formal exchanges governing the provision of material assistance.

117. As a general rule, a written demarche should be made as soon as possible to the central authorities at the highest appropriate level. This level, and the form of the demarche, will be determined by the nature of UNHCR's presence in the country. A demarche by a newly arrived mission would normally be addressed to the Minister of Foreign Affairs (or perhaps Interior; the advice of UNDP and/or embassies should be sought). The communication might:

- i. Refer to the information available to UNHCR on the influx or problem (qualifying it as necessary: the government will often know more than UNHCR).
- ii. State UNHCR's view that persons involved are or may (as applicable) be of concern to the High Commissioner.
- iii. Refer to the government's protection responsibilities; including in particular the obligation not to refoule anyone to persecution.
- iv. Request (confirm understanding, express gratitude for, etc.) assurances that persons will be admitted if seeking protection, be granted (at least temporary) asylum (if appropriate: pending determination of status and longer-term arrangements).
- v. Request that the authorities ensure UNHCR access to persons of concern (as provided in UNHCR's statute and the 1951 Convention).
- vi. Offer, where persons are found to be of concern to UNHCR, commitment in principle to provide material assist-

ance (for example, «every effort» formula).

118. The text of representative level demarches should be communicated to Headquarters at once both for information and in order that they may be shared with the permanent mission and/or referred to in any subsequent Headquarters level demarches. Likewise, the texts of the latter should of course be shared at once with the field.

119. Representatives should immediately recommend action at the Headquarters level if they are in doubt that their interventions alone will secure protection.

120. New oral and written demarches must be made if there are any grounds for concern that protection is still not adequately assured (*refoulement*, abduction, arbitrary detention, mistreatment, abuse of women and children etc.). Complementary action at the local level should both closely monitor developments affecting protection, and concentrate as far as possible on assisting the authorities to meet the practical problems of the influx.

Working with other humanitarian agencies

121. Implementing and operational partners have specific expertise that is essential in ensuring the protection of refugees and others of concern to UNHCR. Often other humanitarian agencies (UN and NGOs) who have worked in the affected area for some time are more aware of the local situation, have good working relations with the government and other authorities and are present in locations that UNHCR may not be. Their expertise – on essential matters such as medical care, water and sanitation, logistics, community services, education and protection – must be relied upon. Various agencies will need to coordinate between themselves to ensure that there is no unnecessary duplication of services and that all possible sectors are covered simultaneously. In

particular, similar to UNHCR, many UN and NGO agencies deploy ‘protection officers’. UNHCR should work closely with these colleagues rather than duplicate work that may do more harm than good, especially from the perspective of persons of concern to UNHCR.

122. Some UN agencies that are often present in emergencies include the United Nations Children’s Fund (UNICEF), the World Food Programme (WFP), the United Nations Office of the High Commissioner for Human Rights (OHCHR), and the Office of the Co-ordinator for Humanitarian Affairs (OHCA). The International Committee of the Red Cross (ICRC), the International Federation of the Red Cross (IFRC) as well as national and international NGOs such as the International Rescue Committee (IRC), Danish Refugee Council (DRC), Norwegian Refugee Council (NRC), Save the Children (STC), Médecins Sans Frontières (MSF), Oxfam and national red cross societies also have established a significant capacity to work in emergency situations (see Appedix 1 on the MoUs established with some of these agencies). International Human Rights NGOs such as Human Rights Watch, Amnesty International and Refugees International are also important partners in advocating for better standards of protection in operations (see paragraph 124 on partnership in emergencies relating to internal displacement). National NGOs often have excellent information about the local conditions and good relationships with the local authorities as well as communities and local women’s associations can be important partners in working on gender issues and women’s rights.

Public relations and working with the media

123. In certain circumstances tensions in relations between neighbouring countries may make it necessary to stress even at the local level that the granting of asylum is a purely humanitarian act.

Emphasize that the granting of asylum is purely humanitarian and therefore not a hostile act, and that UNHCR's presence and involvement may help reduce tension.

124. Often in an emergency, UNHCR may require the support of other agencies and governments in urgently influencing the host countries policies such as access to asylum, *non-refoulement* and security of refugees and others of concern. Furthermore, a number of governments and other UN agencies may also assist in funding or supporting UNHCR's operations. This is why briefing other UN organizations and the diplomatic community, especially governments whose influence may be able to facilitate protection is vital.

125. Visits by national and international media and the diplomatic corps may help achieve a broader appreciation of UNHCR's protection function. The position to be taken with regard to the media will depend very much on the circumstances and whether or not publicity would help protect persons of concern to UNHCR. It is important that the confidentiality and privacy of persons of concern is being protected, especially children and survivors of SGBV. Close coordination within the various levels of UNHCR is necessary. Where UNHCR is already represented, previously established good contacts with the locally based (and especially local language) media may prove a valuable source of information and is useful in advancing an understanding of UNHCR's role (See Chapter 9 on media relations).

Specific issues in relation to the internally displaced

126. While measures to assist the internally displaced are broadly similar to those used for refugees, more reliance is placed on national authorities, national laws and human rights instruments to protect them. The *Guiding Principles on Internal Displacement* that are based on international

human rights law, international humanitarian law and international refugee law should also be used to guide UNHCR's actions towards the internally displaced.

127. The *Guiding Principles* address the specific needs of internally displaced persons worldwide. They identify rights and guarantees relevant to the protection of persons from forced displacement and to their protection and assistance during displacement as well as during return and reintegration.

128. Generally, UNHCR is committed to engaging with the internally displaced only when they are fleeing armed conflict, generalized violence or violations of human rights. Only exceptionally and on a good offices basis, does UNHCR assist persons who are internally displaced for other reasons.

129. Since 2006, with a view to ensuring a more predictable response, UNHCR addresses all emergencies in relation to the internally displaced within the context of a broader UN-wide collaborative response (an inter-agency response). UNHCR is responsible for ensuring (as the 'cluster lead') that the internally displaced are adequately **protected (including issues in relation to their return)** and that the **emergency shelter and camp management 'clusters'** are properly managed and addressed, either by UNHCR or by other competent agencies. Other agencies will be responsible for ensuring that other 'clusters' are properly addressed.

130. As a cluster lead for these three areas, UNHCR is responsible as 'the first port of call' and the 'provider of last resort'. This means that UNHCR may not necessarily be the agency funding, or carrying out all the field activities. Rather, as cluster lead UNHCR must ensure that it, as well as other actors, assume their own allocated responsibility to the best of their capacities and that additional funding is secured.

131. In emergencies, UNHCR should be ready from the outset to provide the Humanitarian Coordinator with needs and capacity assessments on the ground and advocate for the resources needed. These assessments should indicate which organizations will address which aspects of an adequate response in protection, camp coordination and shelter. Where capacity gaps exist in the cluster as a whole and where no other actors can realistically respond, UNHCR must be prepared to act as a provider of last resort and to plan to carry out priority activities, seeking funds accordingly.

132. In such emergencies, UNHCR must build effective partnerships, with governments, with UN agencies, inter-governmental organizations, NGOs and affected populations. These agencies and others can significantly multiply response capacity and mobilize additional resources within the clusters. Relationships with agencies and NGOs working in the three UNHCR-led clusters require particular effort and attention and co-coordinating all activities under these clusters requires specific attention.

133. Humanitarian Coordinators in each country are responsible for, among other things, establishing appropriate cluster arrangements in close consultation with the Country Team, taking into consideration the capacities of agencies specific to the situation. While the cluster approach can be flexibly applied and may not exactly replicate arrangements at the global level, the aim is to leave no major sectoral gaps in leadership and response. UNHCR should ensure that age, gender and diversity are mainstreamed in all cluster activities. Needs assessments at the field level should include the participation of the affected populations - women, men, girls and boys of diverse backgrounds - using UNHCR's Tool for Participatory Assessment. While UNHCR has accepted to be the cluster lead in three areas, it should

also, as part of the Country Team efforts, be proactive in all other relevant clusters by lending its support, expertise and resources where required.

134. In relation to emergencies in countries where UNHCR has been protecting the internally displaced even prior to 2006, the existing arrangements can be reviewed in light of the 'cluster' approach and if there are gaps in leadership or coordination that need to be addressed, the cluster approach should provide a useful framework to discuss and clarify roles and to draw more support from cluster leads, thus strengthening the overall response.

Editors Note: Staff being deployed to emergency operations involving the internally displaced should first check for any updates on UNHCR's policy on this matter.

Emergencies as a result of changes in government policy

135. A special type of protection emergency can occur as the result of a sudden change, for whatever reason, in government policy towards persons of concern to UNHCR already on its territory. Those affected may include both persons known to UNHCR and recognized as refugees, and others who have hitherto neither formally requested asylum nor made themselves known to UNHCR, but who may nevertheless fall within the High Commissioner's competence.

136. The action to take in protection emergencies of this type will vary greatly in each case and only very general guidance can be given. Accurate information, a UNHCR presence where needed, and a clear and consistent policy in defence of the rights of the refugees will always be required. The guidelines that follow must be modified as necessary in light of the actual situation. Some of the considerations discussed in the previous sections may also be relevant.

137. UNHCR should immediately try to identify and if possible establish a list of persons who are, or may be at risk but were not previously known to UNHCR staff. This list must be constantly updated. Sources of information include the diplomatic community (some persons may approach or even seek asylum in embassies), the ICRC, the national Red Cross or Red Crescent society, churches and NGOs. Care should be taken to ensure the confidentiality of individual cases when establishing contacts with embassies. Early identification, and, if possible registration of, these new cases by UNHCR can often be a very important source of protection.

138. UNHCR must maintain (or in the case of a new regime, establish) close and continuing cooperation with the authorities. If the country has acceded to the relevant international instruments, these obligations remain binding, whatever new policies may be adopted. If the country is not a party to any of the refugee instruments, the Statute and universal instruments must be invoked.

139. The government is, of course, responsible for the physical security of the refugees. Every effort must be made to encourage the government to protect refugees, particularly during any periods of civil tension. The immediate aim is that refugees should be able to remain in safety in their present country of asylum. Respect of the principle of *non-refoulement* is of paramount importance.

Durable solutions

The three traditional durable solutions

- i. **Voluntary repatriation occurs when uprooted people return to their homes after making a free and informed decision to do so.**
- ii. **Resettlement occurs when refugees are offered and take up permanent admission in a third safe country to rebuild their lives.**
- iii. **Local integration occurs when refugees rebuild their lives in the country where they have found safety.**

140. From the outset of an emergency, UNHCR and its partners must bear in mind the ultimate goal of international protection: to help uprooted people overcome displacement and achieve a solution whereby national protection of a State is effectively and permanently re-established. Achieving self-reliance through a community-based approach at an early stage during displacement is essential in enhancing the sustainability of any future durable solution.

Whenever feasible, integrate voluntary repatriation, local integration and resettlement into one comprehensive approach. These three solutions must be implemented in close cooperation among countries of origin, host States, UNHCR and its partners as well as the people of concern themselves.

Voluntary repatriation

141. Most large scale refugee emergencies are eventually resolved through the voluntary repatriation of refugees and the internally displaced once the danger they have fled from has been removed or significantly reduced. In the past decade, many of UNHCR's larger operations involve the large-scale repatriation of refugees and the internally displaced.

142. The return of such uprooted people must be **voluntary** -- free of physical, psychological or material coercion to return. It must also take place in conditions

of **safety** and with **dignity**. Each individual, man and woman – even individual members of a family -- should be allowed to make this choice. Refugees and the internally displaced must be provided with accurate information about the prevailing situation in their home country/regions of origin so that they can make an informed decision about if and when to return. This information should be provided in a manner that will make it easier for them to make a decision and reach all members of the community. Specific needs of individual persons – such as unaccompanied and separated children, the disabled, single parents or survivors of SGBV, torture and trauma – in the context of repatriation should be carefully considered and addressed.

143. To ensure that uprooted people can return home and live in safety and in dignity, UNHCR and its partners monitor the repatriation and reintegration processes to the greatest extent possible using international human rights standards to guide their work. Returnee monitoring is a crucial activity that assists in ensuring the long-term sustainability of return.

144. UNHCR, its partners and development agencies assist countries in ensuring that returning refugees have equal access to resources. These include food, land, and housing, and such services as education, health care, potable water and sanitation. Over time, returnees should become self-reliant. Successful repatriation fosters economic, cultural, and social stability and reduces the risk of new conflicts erupting. (see chapter 22 for more information on voluntary repatriation).

Local integration

145. Local integration in the country of asylum is a complex and gradual process, comprising three distinct but inter-related legal, economic, and social and cultural dimensions. Over a long period of time,

refugees are able to, at least *de facto*, integrate into the host society, especially in situations where they are not forced to reside in camps and can become more self-reliant over time.

Resettlement

146. Resettlement (the process of selection and transfer of refugees from a country of asylum to a third state that has agreed to admit them on a permanent basis) should be considered when refugees are at risk in their country of refuge or have particular needs during an emergency. The absence of (prospects for) another durable solution is also relevant for determining whether resettlement should be pursued. Before a decision is taken to pursue the resettlement of a refugee, every effort should be made to fully explore the possibility of local solutions. At the same time, the possibility of voluntary repatriation in the foreseeable future (within an acceptable time frame) should also be evaluated.

147. During an emergency, it is particularly challenging to identify all persons who may be in need of urgent or emergency resettlement (i.e. provide equal access to all persons of concern to resettlement). Similar to accessing humanitarian assistance, it may be difficult for women (including married women), children, older persons or the disabled, and persons from minority ethnic or religions groups and who are facing severe protection problems from accessing resettlement. To address this issue during an emergency, it would be necessary for UNHCR and its partners to work closely with individuals and groups to identify their needs and find solutions for them.

Emergency resettlement

148. Emergency resettlement must be used selectively and on the basis of a thorough and objective assessment of both refugee status and urgency of removal.

Emergency resettlement should be considered where the security and/or medical threat faced by the refugee necessitates his or her removal from the threatening conditions within a very few days, if not within hours. For the sake of clarity, a notional limit of a maximum of five days during which the person is resettled is considered.

149. Emergency resettlement can be considered where there is:

- i. an immediate threat of *refoulement* to the country of origin;
- ii. an immediate threat of *expulsion* to another country from where the refugee may be *refouled* or where his/her life or liberty would be at risk of being threatened;
- iii. a threat of arbitrary arrest, detention or imprisonment in the country of asylum;
- iv. a threat to physical safety or human rights in the country of refuge analogous to that under the refugee definition and rendering asylum untenable.

150. Categories of refugees who can be considered for emergency resettlement include refugees with legal and physical protection needs, survivors of violence and torture, mixed marriages, refugees with serious medical needs which cannot be treated in the country of asylum, women-at-risk, children and adolescents (for whom a determination has been made that resettlement is in their best interests) and older refugees. (Refer to the UNHCR Resettlement Handbook, 2004 for more information on resettlement categories and procedures).

Urgent cases

151. Refugees who face conditions requiring their expeditious resettlement but can wait for more than 5 days are categorized as **urgent** cases. Urgent cases require close and early follow-up with resettlement governments to ensure they are prioritized over regular cases, which

can sometimes remain pending for many months. Field Offices may request Headquarters' support, in such cases. Note that the abuse of the emergency category will erode the credibility of UNHCR's judgment concerning such submissions, thereby reducing the effectiveness of these channels.

Emergency resettlement procedures

152. When faced with an emergency resettlement requirement, time available for investigation of a refugee's statement may be severely limited. Nevertheless, such time that may be available before departure must be used to the maximum with a view of checking the veracity of the story and its consistency.

153. The following information should be conveyed to Headquarters immediately:

- full name, date of birth, place of birth, sex, nationality and ethnic origin;
- details on status determination (Convention or mandate);
- whether accompanied by family (if so, size);
- details of each dependent to accompany the candidate;
- brief explanation of need(s) for resettlement;
- brief justification for emergency categorization, and required time-frame for departure;
- whether valid travel documents held by all refugees concerned;
- in case of medical emergency: diagnosis, prognosis, current condition of refugee (family members), whether escort needed; and
- recommendation on countries of resettlement and reasons, including third country links.

154. A full submission, including the **Resettlement Registration Form (RRF)** and supporting documentation, must follow by the fastest means available.

155. The RRF can be obtained from the Resettlement and Special Cases Service at Headquarters. This is the section of the Division of International Protection Services that is responsible for processing emergency submissions. In addition, the Service helps coordinate and support the resettlement of difficult protection and special needs cases. It should be contacted for advice.

156. Once a resettlement submission has been made, a **focal-point** should be designated to follow-up on the particular case, thereby ensuring that the case proceeds in a timely manner and that all unnecessary delays are avoided. Additional information may be found in the UNHCR **Resettlement Handbook, 2004**.

Annex 1: International instruments and legal texts concerning refugees and others of concern to UNHCR

Below are some of the international instruments and legal texts that may be particularly useful in an emergency context. However, as emergencies vary, there may be other instruments and legal texts as well as national legislation that would be relevant and important. They can be found on UNHCR's RefWorld database.

Refugees and others of concern to UNHCR

Name	Description
Statute of the Office of the United Nations High Commissioner for Refugees	The Statute of the High Commissioner's office was adopted by General Assembly Resolution 428 (V) of 14 December 1950. It serves as UNHCR's constitution and sets out UNHCR's function and responsibility to provide international protection and to seek permanent solutions to the problem of refugees. It also includes a definition of persons who are of concern to UNHCR. The mandate has been elaborated and expanded over time through subsequent General Assembly and ECOSOC resolutions.
1951 Convention Relating to the Status of Refugees, and its 1967 Protocol Relating to the Status of Refugees	An international treaty which is binding upon the signatory states. It sets out the responsibilities of states which are parties to the Convention vis-à-vis refugees on their territories, and sets out the obligations of the refugees.
Conclusions on international protection adopted by UNHCR's Executive Committee (ExCom Conclusions are adopted every year)	Contain important guidance (and standards) to States and UNHCR on international protection.
OAU Convention governing the specific aspects of refugee problems in Africa (Organization of African Unity, Addis Ababa, 1969)	A regional complement to the 1951 Convention and 1967 Protocol. It contains an expanded refugee definition as well as provisions on safe and peaceful asylum, burden-sharing and voluntary repatriation.
i. Cartagena Declaration on Refugees, 1984 ii. American Convention on Human Rights, "Pact of San Jose, Costa Rica", 1969	Non binding declarations which have greatly influenced regional policies on refugees and asylum seekers, and contain an expanded refugee definition.
The Asian-African Legal Consultative Organization's (AALCO's) 1966 Bangkok Principles on Status and Treatment of Refugees (as adopted on 24 June 2001 at the AALCO's 40th session, New Delhi)	Another non-binding document that addresses refugee issues at a regional level.
Convention Relating to the Status of Stateless Persons, 1954	Grants a recognized status to stateless persons who are lawful and habitual residents. Similar to the 1951 Convention Relating to the Status of Refugees.
Convention on the Reduction of Statelessness, 1961	Contains measures to ensure that persons do not become stateless.
The Guiding Principles on Internal Displacement	Addresses the specific needs of internally displaced persons worldwide. They identify rights and guarantees relevant to the protection of persons from forced displacement and to their protection and assistance during displacement as well as during return or resettlement and reintegration.

International Human Rights

Name	Description
Universal Declaration of Human Rights, 1948 (UDHR)	Universal instrument setting out the basic human rights of all persons, including refugees and other persons of concern to UNHCR.
International Covenant on Civil and Political Rights of 16 December 1966 (ICCPR)	Obliges states which are parties to the Covenant to respect and ensure the rights set out in the Covenant to all individuals (within the state's territory and jurisdiction), without distinction such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. The ICCPR also has two optional protocols as well (one on an individual complaint mechanism and another to abolish the death penalty)
International Covenant on Economic, Social and Cultural Rights of 16 December 1966 (ICESCR)	Obliges states to respect the human right to work, the right to an adequate standard of living, including food, clothing, and housing, the right to physical and mental health, the right to social security, the right to a healthy environment, and the right to education. It is also applicable to refugees and others of concern to UNHCR.
Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment of 10 December 1984 (CAT)	Defines 'torture' and bans torture under all circumstances. It also states that States cannot return a refugee to his country if there is reason to believe he/she will be tortured (principle of non-refoulement).
Convention on the Rights of the Child of 20 November 1989 (CRC)	A comprehensive code of rights for all children (defined as 18 years or under) including children of concern to UNHCR. It requires that children have a right to citizenship upon birth and specifically addresses the needs of refugee children (article 22). The CRC also has two optional protocols (one on children in armed conflict and another on the sale of children, child prostitution, and child pornography).
International Convention on the Elimination of All Forms of Racial Discrimination of 21 December 1965 (CERD)	Prohibits racial discrimination (where a person or a group is treated differently because of their race, colour, descent, national origin or ethnic origin and this treatment impairs, or is intended to impair, their human rights and fundamental freedoms). The Convention permits distinctions between citizens and non-citizens; but not between different groups of non-citizens.
Convention on the Elimination of All Forms of Discrimination against Women of 18 December 1979 (CEDAW)	Defines what constitutes discrimination against women and sets a framework for national action to end such discrimination and to ensure the full development and advancement of women in all spheres -- political, educational, employment, health care, economic, social, legal, and marriage and family relations.
Convention on the Prevention and Punishment of the Crime of Genocide of 9 December 1948	Defines genocide and declares it as a crime whether committed during peace time or during war.

International Humanitarian Law and the Law of Neutrality

Name	Description
Geneva Convention relative to the Protection of Civilian Persons in Time of War of 12 August 1949	Covers the treatment of civilians in time of war, including refugees and other uprooted people. It also prevents states from forcibly displacing civilian populations.
(i) Protocol Additional to the Geneva Conventions of 12 August 1949, and relating to the Protection of Victims of International Armed Conflicts (Protocol I)	Provides for additional elements that can protect refugees and others of concern in armed conflict.
(ii) Protocol Additional to the Geneva Conventions of 12 August 1949, and relating to the Protection of Victims of Non-International Armed Conflicts of 8 June 1977 (Protocol II)	Prior to the second protocol the only provision applicable to non-international armed conflicts was Article 3 common to all four Geneva Conventions of 1949. The aim of the present Protocol is to extend the essential rules of the law of armed conflicts to internal wars.
Hague Convention (V) Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land of 18 October 1907	Jointly with Executive Committee Conclusion 94 (2002) this provides a framework for neutral states to identify, disarm, separate and intern combatants who are mixed with refugee populations.

International Criminal Law

(i) Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children, supplementing the United Nations Convention Against Transnational Organized Crime of 15 November 2000 (Palermo Protocol on Trafficking)	These protocols include specific measures to ensure protection of the human rights of victims of trafficking and smuggling although they largely focus on reduction of the power and influence of organized criminal groups that abuse migrants. They define smuggling and trafficking and specify that no action taken by states to combat trafficking or smuggling should contravene the principle of <i>non-refoulement</i> .
(ii) Protocol against the Smuggling of Migrants by Land, Sea and Air supplementing the United Nations Convention against Transnational Organized Crime of 15 November 2000 (Palermo Protocol on Smuggling)	

Miscellaneous

The Charter of the United Nations, 1945	Places certain general obligations on member states of the United Nations of particular relevance to UNHCR's international protection function.
---	---

Annex 2: Physical security of refugees and others of concern

Checklist for addressing the physical protection and security of refugees

In situations which may threaten refugee security or give rise to tension and conflict between the refugee community and the local population, the following measures may be considered to address the specific causes of the problems:

- Did the Office negotiate with the host government and ensure that refugee camps are situated in an appropriate location at a safe distance away from international borders and from zones of conflict?
- Are the size and the design of the refugee camps and settlements effectively contributing to the maintenance of a peaceful environment and the security of refugees and local residents?
- Has the Government provided comprehensive security arrangements - through the use of a civilian police force and professional camp administration - upholding law and order within the camps and ensuring a peaceful environment?
- If not, has the Office discussed with the Government how to ensure the physical protection of refugees, including practical mechanisms in safeguarding their safety? And, has UNHCR supported the Government in ensuring its responsibility for refugee security with a “security package” type agreement?
- Has the Government initiated and facilitated measures for the early identification, separation, disarmament and internment of combatants?
- Has participatory assessment been undertaken with groups of women, girls, boys and men and is it done regularly?
- Have camp rules and regulations been developed with the women and men in the city and also promulgated?
- Do the police (and where applicable, other security forces) have and adhere to a Code of Conduct relating to their responsibilities in the refugee camp and do they have a gender balance?
- Are the local judicial and penal services adequate to cope with the added burden of a large refugee population, and if not, does UNHCR assist in any way?
- Do the camps have a participatory management structure including a refugee committee with 50% participation by women, and do refugees have a role in camp security? And does the camp management NGO use a community-based approach?
- If yes, to what extent are refugees involved in camp security, i.e. through refugee security volunteers, community watch teams with 50% women, etc.? Is the role and responsibilities of the refugees well-defined and integrated within the official authority, i.e. the camp administration and national police assigned to the camp?
- Is there effective interaction with the local host community and authorities?
- Has the local population been sensitized to the plight of the refugees through local media (programmes on radio and TV, articles in newspapers) and community leaders?
- Has the Office sensitized refugees to local customs, traditions and environmental considerations?
- Do camp management have adequate means of contacting camp security, local authorities and UNHCR in cases of emergency?
- Do the camps have adequate fire prevention strategies and fire fighting capacity in place, and are camp residents educated about fire hazards and has first aid training been provided to refugee volunteers?

- Are communal areas and/or central points provided with night lighting and has the shelter and/or camp been designed with the participation of women, men, girls and boys?
- Is the Government and Office aware of Executive Committee Conclusion No. 94 on the Civilian and Humanitarian Character of Asylum (2002), and where applicable are actions being taken accordingly?
- [if required] Have measures been introduced to identify, disarm and separate armed elements from bona-fide refugees, and intern combatants and ensure their eligibility within a programme of DDR?
- Have measures been introduced together with relevant actors to ensure special programmes in order to identify, disarm, separate, demobilize and reintegrate child soldiers, both girls and boys? Have the needs of camp-followers/family members been considered?
- Has the Office encouraged the host State to take measures to reduce the risk or prevent forced military recruitment of refugees, in particular of refugee children and adolescents?
- Sexual and gender-based violence:
 - Is there gender-based persecution of, or violence against, refugee women or men? Any examples? What is being done to try to combat this? How have such cases been detected?
 - Are staff aware of the Sexual and Gender-based Violence (SGBV) guidelines and applying them in practice? Are incidents of sexual and gender-based violence reported and data registered and compiled on a weekly/monthly basis?
 - Have budgetary provisions been made to be able to deal with follow-up to SGBV cases (e.g. counselling, safe houses, legal aid, support for medical exams, etc.)?
- Is there an adequate complaints mechanism in place to deal with SGBV?
- How is the Office working to create awareness on the need to address SGBV issues (including community-based discussions, training sessions, use of posters and leaflets, other measures)?

Activities to maintain security in camps

The following activities may be considered to address these issues:

- Establish mechanisms for the enforcement of law and order, such as the presence of an organized police force dedicated to camp security, legal redress mechanisms, and the physical aspects of the camp (e.g. design layout, maximal size, capacity, and location).
- Establish camp governance, management and maintenance systems incorporating transparent structures for encouraging effective refugee participation, including women, adolescents and groups with specific needs.
- Ensure systematic protection monitoring including the regular presence of UNHCR and NGO staff.
- Ensure community activities such as educational programmes, health and social services, self-reliance activities, youth schemes, activities and services which engage the host community with the refugee community, and refugee-managed infrastructure projects.
- Refugees themselves should have a role in ensuring their security. They should be empowered along with host community leaders and supported to develop of refugee volunteer guards /neighbourhood watch teams with 50% participation by women.

- Sensitize, and where warranted, strengthen the capacity of the local police to discharge its responsibilities effectively and efficiently.
- Refugee leaders and representatives should be elected among candidates that are committed to promoting the civilian and humanitarian character of their camp and should reflect a fair gender distribution.
- Refugees should be involved in the development of camp rules.
- Recognize both the legal rights and obligations that refugees have in a country of asylum.
- Maintain constant dialogue and cooperation with local populations and authorities.
- Develop effective, objective, and safe information channels as well as reporting and compliant mechanisms.
- Hold Codes of Conduct training for all involved parties – UN, NGO, and refugee committees.
- Develop a strategy for cooperation with national law enforcement authorities which includes their direct involvement with UNHCR training and monitoring.

Introduction

1. There is no single blueprint for refugee emergency management; each refugee emergency is unique, however, it can be defined as:

The organization of capacities and resources to meet threats to the lives and well-being of refugees.

2. There are a number of distinguishing features in emergency management:

- i. The lives and well-being of people are at stake.
- ii. Reaction time is limited.
- iii. Risk factors are high and consequences of mistakes or delays can be disastrous;
- iv. There is great uncertainty.
- v. Investment in contingency planning and other preparedness activities is crucial.
- vi. Staff and managers may be under particularly high stress because of, for example, security problems and harsh living conditions.
- vii. There is no single obvious right answer.

Organization of this section

3. This section of the handbook (chapters 3 to 9) is structured to reflect the phases of emergency preparedness and response. Firstly, the preparedness activities of contingency planning and early warning are dealt with (chapter 4), followed by initial needs, resource and participatory assessment and immediate response (chapter 5). Operations planning, coordination and site-level organization are dealt with in chapters 6 and 7. Next, implementing arrangements are discussed, including procedures for operations implementation and control (chapter 8). Finally, chapter 9

on external relations, covers relations with the host government (including establishing a formal presence in the country of operations), relations with the donor and diplomatic community and handling media interest. Note that certain activities cut across the phases of emergency preparedness and response, such as, external relations, coordination, and planning and age, gender and diversity mainstreaming using a rights-based approach.

4. Figure 1 shows some of the considerations discussed in this section in diagrammatic form, in particular in relation to emergency response. The response activities of problems and needs assessments, operations planning, implementing arrangements and programme formulation are all very closely related. Some aspects treated separately may be indivisible in practice, and there is no single correct order or way in which an emergency operation should be formulated (but it must conform to established UNHCR procedures governing project submission and control).

Capacity and resources

5. Preparing for and responding to refugee emergencies are tasks which require the availability of the right resources at the right time as well as the capacity to use these resources effectively.

6. Planning for capacity building from an early stage of emergency is very important. As soon as possible, efforts should be made to map out the community structures (representing both women and men), means of communication within the population and identifying the potential areas of community participation as well as their capacity and skills. These are crucial in successful management of the emergency.

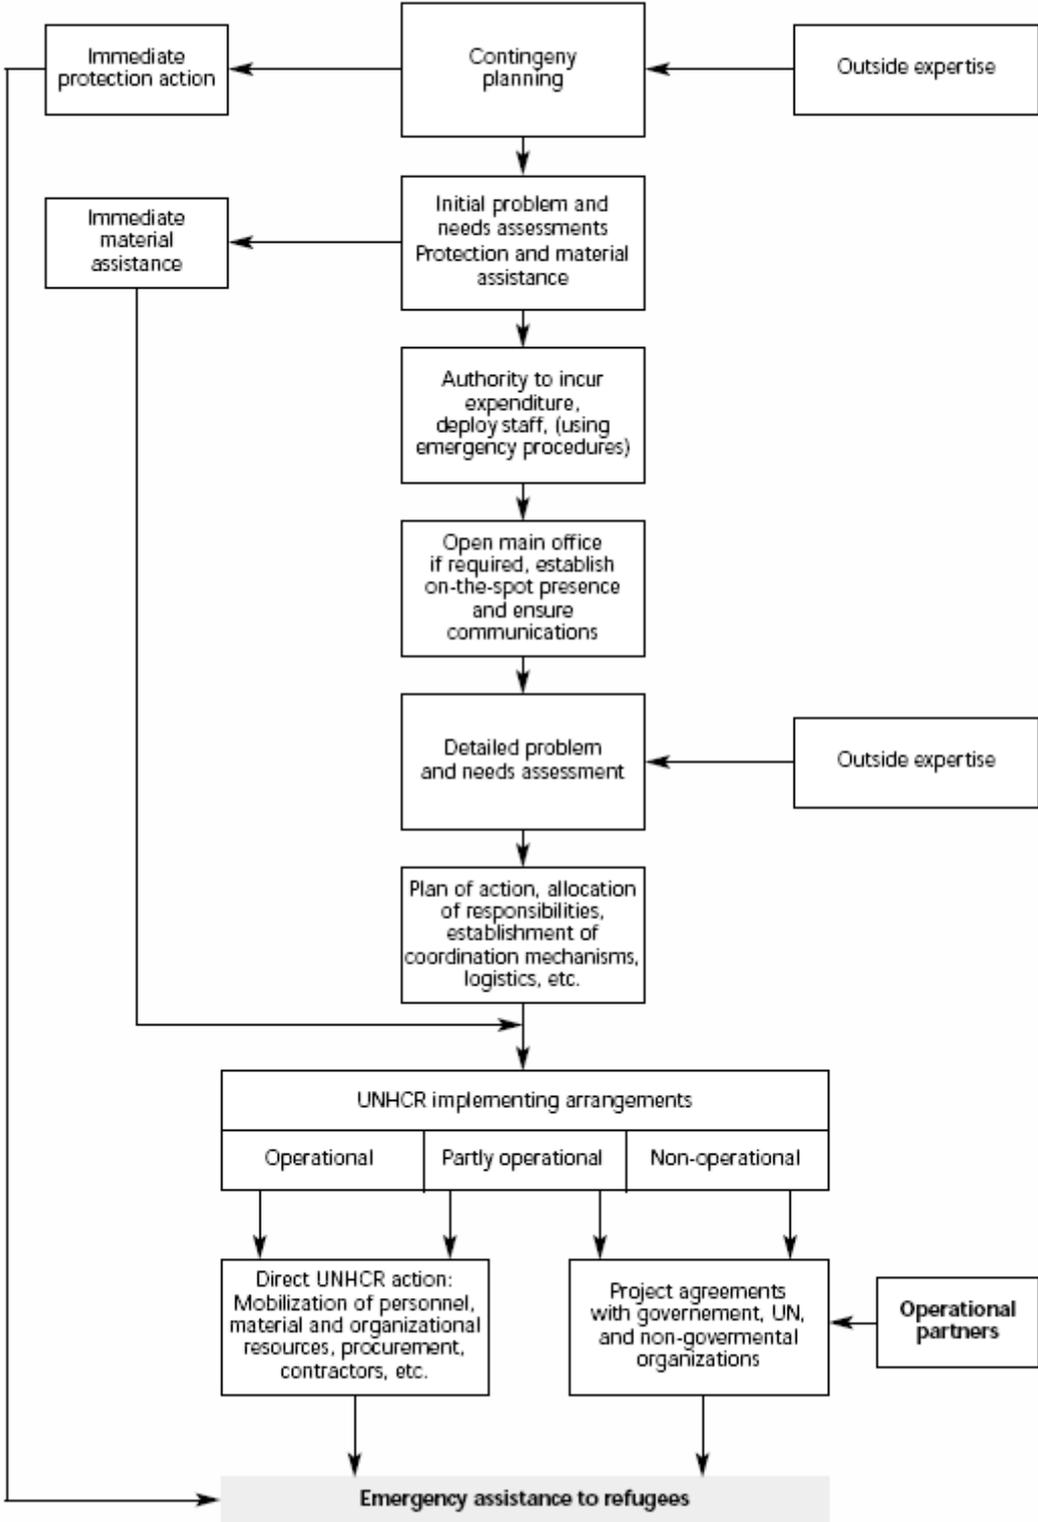

This should be followed by planning community-based activities and involving the communities in implementation by awareness raising through existing communication channels if they are representative.

7. Capacity is the internal organizational capability which includes planning, staffing, structure, systems, procedures, guidelines, information flow, communication, decision-making and administrative sup-

port. Resources are the financial and human resources, relief materials, support equipment, tools and facilities.

Strong capacity can sometimes alleviate resource shortfalls by making more effective use of limited resources.

Figure 1 – Considerations in Emergency Management

8. Capacity, an aspect of emergency management, is sometimes not given adequate priority. Resources are often given more emphasis during both the planning and operational stages since they are a more tangible element. But it is capacity that determines the quality of an emergency response.

9.

Effective emergency management requires that the development and use of capacity be accorded appropriate priority throughout the different phases of an operation.

While much of the required capacity must be pre-existing, capacity can also be developed during an operation.

The key emergency management functions

Introduction

10. Certain management functions are essential throughout a refugee emergency.

These are:

- Leading
- Planning
- Organizing and coordinating
- Controlling

11. These will be required of UNHCR as an organization and also from individuals, at all levels, within UNHCR.

If these functions are not being performed then it is likely that there will be serious deficiencies in the management of the emergency operation.

They always remain the responsibility of the person in overall charge of the operation, though they may be delegated to other staff.

Leading

12. This can be defined as:

The process of creating and communicating a vision for the emergency operation and providing a clear strategic direction for actions even in situations of great uncertainty and risk.

13. Successful management requires leadership; subject to the role of the government, leadership may be the most important single contribution of UNHCR to the emergency situation. Leadership requires that once decisions are reached, they are properly implemented. This discipline is essential in emergencies when there is often no time to explain the considerations involved. As far as possible, those directly concerned should contribute to decisions that affect them, but final responsibility rests with the UNHCR officer in charge.

Planning

14. This can be defined as:

Setting in place the process of assessing the situation, defining immediate objectives and longer term goals and the activities to accomplish them.

15. Planning is vital both before and during an emergency, and operations planning must be based on detailed needs, resource, and participatory assessments with women, girls, boys and men of concern. An essential element of good planning is to include all relevant actors (UN agencies, NGOs, Governments, Local Authorities and Civil Society).

Organizing and coordinating

16. This can be defined as:

Establishing systems and mechanisms to achieve a given objective by coordinating people and organizations so that they work together, in a logical way, towards the common objective.

17. It involves selecting, training and supervising staff, creating a multi-functional team approach to ensure a holistic re-

sponse, assigning and clarifying roles and responsibilities of all those involved and structuring communication and information flow. In an emergency, coordinating within UNHCR and external actors, is a crucial aspect of organizing.

Delegation of Authority and Responsibility

18. Emergency management should be organized so that responsibility and authority are delegated to the lowest appropriate level, and should be exercised as close to the operation or beneficiaries as is practical. Clear and unambiguous lines of authority and reporting should be established and communicated to all staff.

19. The management structure should be organized so that accountability for actions, including management decisions, is clear. Those who make a decision should be those with the appropriate level of knowledge to enable them to make that decision and should be responsible for ensuring its implementation and follow up (including monitoring). The involvement of unnecessary layers of management, and unnecessary numbers of people, in decisions and responsibility for implementation, confuses and diffuses accountability. Ambiguity and lack of simplicity in the definition of responsibilities also slows action.

Controlling

20. This can be defined as:

Monitoring and evaluating performance in comparison with plans and initiating changes where necessary.

21. Note that the key management functions are important not only during emergency response, but also in the preparedness phase. Organization and coordination mechanisms, for example, should be developed during contingency planning.

Stages in refugee emergency operations

22. The table below depicts one model of activities as they may occur in refugee emergencies. It is important to understand that the stages and activities of a refugee emergency operation could overlap, or occur simultaneously.

23. A final phase of an emergency operation is the transition from emergency response to longer-term support, building a community-based approach and durable solutions (voluntary repatriation, local integration and resettlement). The time spent providing emergency relief should be kept to a minimum, and planning and implementation should always take account the longer term. The importance of the balance between short term and long term is seen in a number of vital sectors.

Stage	Typical Activities
Emergency preparedness	<ul style="list-style-type: none"> • Prevention • Early warning • Contingency planning • Development of emergency response systems • Generation of support among potential host and donor governments • Provision of stand-by resources • Pre-positioning of supplies • Training
Emergency response	<ul style="list-style-type: none"> • Problem, needs, resources and participatory assessments • Community mobilization • Resource mobilization • Handling donor relations and media interest; • Operations planning • Implementation and coordination • Monitoring and evaluation • Transition to the post emergency operation

24. Assisting governments in seeking durable solutions for the problem of refugees is a mandated function of UNHCR. Durable solutions must always be kept in mind, starting at the contingency planning stage. It is in this period that choices are made concerning how, how much,

and for how long, aid will be delivered. How aid is delivered and the role of the different members of the community can strengthen or undermine their capacities for self-reliance. These choices often have repercussions on the prospects for durable solutions that last long after the emergency has ended.

Emergency preparedness

25. The best way to ensure an effective emergency response is by being prepared. Emergency preparedness can be defined as:

Planning and taking action to ensure that the necessary resources will be available, in time, to meet the foreseen emergency needs and that the capacity to use the resources will be in place.

26. The scope of emergency preparedness is broad and the activities at that stage can be undertaken at the global, regional and country levels.

The preparedness measures should enable an organization to respond rapidly and effectively to an emergency.

27. At the global level, UNHCR maintains centrally a range of stand-by emergency response resources. These resources have been developed on the basis of past experience in emergencies. They include staff support, human and financial resources, operational support items and services, and centrally managed emergency stockpiles. The resources are available for deployment at short notice to any area where the need arises. They ensure a minimum and predictable level of global preparedness for emergencies. Moreover, there are also training activities available which can be used for capacity building.

28. For details of these resources, see the Catalogue of Emergency Response Resources (UNHCR, 2006), which is available from Headquarters.

29. The process of contingency planning reduces the lead time necessary to mount an effective response and is a crucial tool to enhance the capacity to respond. Depending on the likelihood of an emergency, the contingency plan should be updated at regular intervals.

At the country and regional levels, early warning and contingency planning are the key preparedness measures. As a rule, these should be developed together with our main partners.

30. The contingency planning (see chapter 4) will allow the identification, in advance, of gaps in resources. A realistic plan may encourage donors and others to provide the missing resources.

31. Contingency planning helps predict the characteristics of the impending emergency – it increases the institutional analytical capacity which can be drawn upon should an emergency occur. It also helps identify the additional preparedness activities which may be required. These may include development or restructuring of the UNHCR organization in the country, emergency staffing, stockpiling, pre-positioning supplies and training. Priority should be given to activities requiring longer lead times.

Emergency Indicators

32. An emergency may start with a sudden large influx of refugees, with several thousand persons crossing a border, causing a highly visible life threatening situation. More often however, the onset of an emergency is not so dramatic or obvious, and a situation requiring an extraordinary response and exceptional measures may develop over a period of time. It is therefore essential to be able to recognize if a situation exists (or is imminent) which requires an emergency response, and what are the likely key characteristics (see table 1).

33. The following indicators are measurable and are therefore commonly used as thresholds above (or below) which an emergency situation clearly exists, or to signal whether a situation is under control and whether there is a need for urgent remedial action. The most important of these indicators is the mortality (or death) rate (see chapter 17 on Health for information on how to calculate the mortality rate. More details of the other indicators are given in the respective chapters and in Appendix 2 Toolbox).

Table 1 – Emergency Indicators

Indicator	Emergency Levels
MORTALITY RATE	> 2 per 10,000 per day
Nutritional status of children	> 10% with less than 80% weight for height
Food	< 2,100 calories/person/day
Water quantity	< 10 litres per person per day
Water quality	> 25% of people with diarrhea
SitesSpace	< 30 sq. meters per person (this figure does not include any garden space)
Shelter space	< 3.5 sq. meters per person

34. Other indicators may not be so easily quantifiable but may be just as critical, for example, the presence of a physical threat to the refugees or to the standards of human rights which they enjoy. In particular, threats of refoulement should be considered as an indicator of a need for an emergency response.

Emergency Response

35. Emergency response can be defined as:

Immediate and appropriate actions to save lives, ensure protection, and restore the well-being of refugees.

36. Once safe asylum is assured, the priority of emergency management will be life saving activities. Timely and rapid problems, needs and resources assessments will help confirm or identify areas where gaps still exist from the contingency plan which will then be transformed to an operations plan (see chapter 6: Operations Planning).

37. Identification of problems requiring specialist expertise is essential. Most refugee emergencies will require, in addition to protection staff, community services staff and one or more technical experts to coordinate the crucial technical sectors, such as health, food, nutrition, sanitation, water, shelter and infrastructure.

Introduction

1. Contingency planning can be defined as:

A forward planning process, in a state of uncertainty, in which scenarios and objectives are agreed, managerial and technical actions defined, preparedness measures undertaken to mitigate the effects and response systems put in place in order to prevent, or better respond to, an emergency.

The contingency planning process builds organizational capacity and is thus a foundation for operations planning and all aspects of emergency response.

2. It involves a group of people representing UNHCR and partner organizations (a Planning Group) working together to identify and validate the objectives, possible scenarios and to define respective responsibilities and actions and then to follow-up to ensure implementation. It is not a one time planning exercise to produce a single documented plan but rather an ongoing process led by a Planning Group and based around a documented plan. Systematic reviews of the assumptions and scenarios built into the plan and proper implementation of the recommendations of the plan, particularly where preparedness measures are concerned, are essential if the response to a real emergency is to be effective.

3. Contingency planning is a prerequisite for rapid and effective emergency response. Without prior contingency planning much time will be lost in the first days of an emergency.

Contingency planning objective

4. The objective is to identify the additional resources needed to respond to an emergency ie, over and above the resources already allocated to the country or regional programme in the Annual Budgeting Round and to organize exist-

ing resources. Once identified it may be necessary to request some funds ahead of the emergency in order to implement any emergency measures recommended in the Plan.

The inter-agency context

5. Since 2005, in the context of an inter-agency approach, UNHCR became responsible for coordinating the protection, camp management and coordination and emergency shelter clusters within a collaborative humanitarian response for new major emergencies, including man-made situations with Internally Displaced Persons (IDPs). Contingency planning and funding for IDP emergencies will be dealt within the Inter-Agency Plan. In which case, the Inter-Agency Contingency Planning Guidelines should be consulted. The guidance in this chapter, therefore, applies to UNHCR Contingency Planning for refugee emergencies only.

Early warning

6. Early warning is the starting point for all planning in anticipation of an emergency. UNHCR Headquarters, (HQ) Geneva, maintains an Early Warning Action Alerts system which classifies countries into four colour-coded categories to signify the immediacy of a potential emergency. These are:

- i. Red for potential emergencies considered likely to erupt within the next three months.
- ii. Orange for potential emergencies considered likely to erupt within the next six months.
- iii. Yellow for potential emergencies considered likely to erupt within the next twelve months.
- iv. Blue for countries in which no crisis is foreseen within the next twelve months.

7. Signs of a potential emergency likely to generate refugees are monitored by field offices and HQ desks. This is carried out by monitoring a wide range of sources, such as internal politics of governments, local population, political leaders, media, academia, refugees and international and national organizations. Based on the analysis, from the field and at HQ, the classification of countries is changed accordingly in the Action Alerts system. As soon as a country is classified as yellow or higher then contingency planning, or a review of the existing plan, should begin.

8. In order to maintain a close review of developing situations, it is important that the collection and analysis of early warning information is integrated systematically into the routine work of UNHCR offices. Regular monitoring and reporting, in a consistent format, is an important means of ensuring that trends and patterns

are recorded and that any changes indicating population displacements are spotted early and appropriate action taken to plan for possible events.

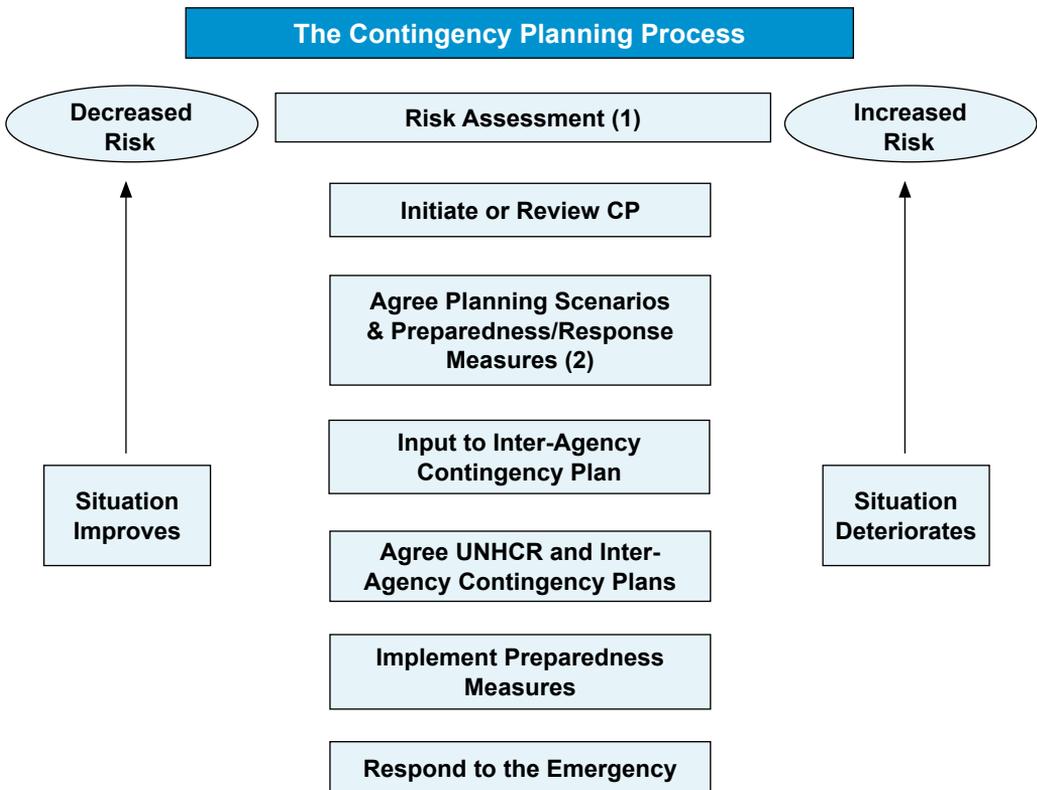

9. As stated above, contingency planning is an ongoing process which should also take place during an existing operation to prepare for a deteriorating situation, such as a new influx or a natural disaster affecting a camp.

When to plan

10. Planning should begin or the process reinvigorated when the country is classified as Yellow within the Action Alerts system, i.e. an emergency situation is considered likely within the next twelve months.

It is better to plan when it is not needed than not to have planned when it is necessary.

Figure 1: The Contingency Planning Process

- (1) Reflected in the Action Alerts system maintained in HQ
- (2) Where appropriate In consultation with Sister Agencies, Implementing Partners and Government
- (3) In reality feedback should occur throughout the process

Responsibility for planning

11. Contingency planning is the responsibility of the field office and is generally undertaken by staff from within a country operation, supported by the Desk as necessary, and requires a core planning group to progress the matter – no one individual can be expected to shoulder the burden. In fast developing situations it may be necessary to request the assistance of an Emergency Preparedness and Response Officer (EPRO), as explained in the Emergency Response Resources Catalogue available from the Emergency, Preparedness and Response Section (EPRS) or on the HCR-Net.

12. The planning group, which should normally be chaired by the Representative or the Deputy, should consist of key decision-making staff from within the UNHCR office, including specialist expertise to provide advice, and results from field visits. Colleagues from sister UN agencies likely to be implicated in a refugee emergency, such as UNICEF, WFP and UNDP and key partners, should also be invited to join the group. Consideration should also be given to inviting government representatives depending on the situation. Whether or not the government wishes to join the Contingency Planning Group it should be kept informed of progress.

The capacity of the actors to respond in an emergency will be enhanced by their previous involvement in the contingency planning process.

13. A UNHCR focal point should be identified with responsibility for calling meetings of the group and maintaining the momentum and to progress recommendations and actions arising from the plan. Additionally, a facilitator and rapporteur for planning group meetings may be required.

14. As Figure 1 shows planning is an ongoing activity. The planning group should frequently review the indicators and ex-

pected scenarios before adjusting objectives and courses of action in accordance with developments. A contingency plan represented by a static document creates a false sense of security as it will quickly become out-of-date.

Contingency planning is best achieved through a cooperative and coordinated effort wherein all concerned work together with shared objectives over a period of time.

Contingency planning and operations planning

15. Contingency planning is not the same as operations planning. Both set strategic and sectoral objectives and develop action plans to achieve the objectives. However, contingency planning involves making assumptions and developing scenarios from an unknown point in the future upon which the response to an emergency is based. In operations planning the starting point is known and the planning builds on known needs and resources based on actual field assessment.

Meetings

16. As shown in Figure 1, contingency planning requires that potential scenarios are identified and assumptions made about the possible evolution of the situation towards an emergency. Clearly this requires a high degree of interaction which is best achieved in an initial meeting of the planning group. The agenda of the first meeting should be agreed and include a short (30 minutes) briefing on the UNHCR Early Warning system and the contingency planning process. The objectives of at the first meeting should emphasize the need to brainstorm the agreed possible, as well as most likely, scenarios, and to use this "planning scenario" to thrash out the sectoral responses to that scenario and the resource requirements. This in essence will be the first step of the contingency planning process.

17. The contingency planning process requires regular meetings to follow-up on the initial draft plan and to ensure that the preparedness measures recommended in the plan are being implemented. Additionally, these meetings should review the assumptions, indicators and scenarios envisaged in the plan and adjust as necessary to reflect the actual evolution of the situation.

18. The views of one agency may differ from others, but this will often benefit the planning process since its diversity of views will provide a useful forum for all assumptions to be questioned and refined. The end product is thus more realistic. While UNHCR may facilitate the meeting, the role and function of each participant must be respected.

19. The output of a contingency planning meeting should be a plan containing the following:

- i. identification of scenarios
- ii. assumptions and indicators
- iii. strategic objectives
- iii. sector objectives and activities
- iv. resources required for a response
- v. recommendations for preparedness measures

Subsequent meetings should review early warning indicators, making changes to the scenarios as necessary, report on actions taken since the previous meeting, and update the existing plan.

Scenario Identification

20. Based on early warning indicators the planning group should develop likely scenarios. This activity is essentially intuitive and based on the experience of the participants but is highly important since it lays the basis for all further planning. In establishing scenarios, assumptions must be made based on best available informa-

tion. However, removing the element of unpredictability cannot be discounted.

21. The scenario is a kind of benchmark. If the influx is smaller than envisaged, the safety margin will be welcome. If it is larger, the importance of taking urgent corrective action is highlighted.

22. For scenario development:

- i. consider all possibilities (be imaginative);
- ii. settle for a limited number of options only (2 or 3 options is the norm); and
- iii. classify the scenarios into: “worst”, “best” and “most likely”. The “most likely” will then become the planning scenario.

Policy and strategic objectives

23. The planning group needs to maintain a shared vision of the probable response despite the fact that various partners may hold different policy approaches. Such differences should be identified and understood by all parties, if not reconciled. Whatever the differences, it is essential that the group agrees on the main principles by establishing overall objectives. All activities undertaken in the plan will need to be consistent with these overall objectives.

Sector objectives and activities

24. As this part of the plan is the most detailed it will be helpful to split the planning group into smaller working groups to cover each of these sectors. For each sector the following should be agreed:

- i. sector objectives, including standards
- ii. main tasks
- iii. responsibility for implementing tasks
- iv. time frame for implementation and
- v. the resource requirements for each sector.

Environmental considerations in contingency plans

25. It is useful to identify, in advance, local environmental issues or concerns which might be relevant to the planned or ongoing operation, so that these can be incorporated into a contingency plan.

Developing such a site-specific plan can help prevent, or at least minimize, irreversible environmental impacts as well as identify environmental hazards which might have an impact on refugee health.

Characteristics of a good plan

26. A good plan should be comprehensive yet not too detailed, finding the proper balance between covering all the important issues yet not flooding the plan with details. It should be well structured, easy to read and, importantly, easy to update and action oriented. It should be laid out clearly showing what needs to be done, by whom and by when.

A short document with a clear structure will facilitate updating.

27. A contingency plan should also achieve a balance between flexibility, so as to remain relevant in spite of changes to the scenarios and specificity for key practical inputs – e.g. pre-positioned stockpiles. The plan must not be overly directive and yet must provide adequate guidance. It should not be expected to act as a blueprint.

28. See Annex 1 for the structure of a typical contingency plan.

Inter-Agency Contingency Planning Guidelines

Annex 1: A model structure for a contingency plan

The following is a proposed structure, divided into six parts, of a Contingency Plan for a refugee emergency (adaptation will be required for different scenarios):

Part 1: General situation and alternative scenario forecasts:

- Overview of the situation, current country operations and existing Inter-Agency contingency plans.
- Specify the planning assumptions.
- Elaborate possible scenarios including worst case and best case and the scenario retained as the planning scenario and why?
- Reasons for changing or updating plans and the consequences (eg influxes, returns, impact on local population, staff and refugee security).
- Current host population and refugee population perceptions of UNHCR, UN staff and international workers.
- Expected refugee profile (including estimates by sex and age groups).
- Total planning figure.
- Entry/exit points.
- Potential arrival/dispersal rate.
- Reception and anticipated in-country movement.
- Settlement arrangements.
- Possible triggering events?

Part 2: Scenario indicators

- Likely early warning indicators that will determine if scenarios are becoming more or less likely.
- The focal point for liaison with HQ over the Action Alerts system.
- Frequency of review of the indicators.

Part 3: Policies and overall operation objectives

- Overall policy (strategic) objectives of the program.
- Comments on policy stance of various partners.
- Planning assumptions.

Part 4: Objectives and activities by sector

- Management and overall coordination.
- Staff safety and security.
- Protection and physical security of refugees and populations of interest.
- Identification of groups with specific needs.
- Reception and registration.
- Food.
- Logistics and transport (persons and goods).
- Infrastructure and site planning.
- Shelter.
- Domestic needs and household support.
- Water.
- Environmental sanitation.

- Health and nutrition.
- Community-based activities.
- Camp management and coordination.
- Education.
- Economic activities.
- UNHCR administrative support available (including staffing, vehicles, telecom etc).

Note: Each section should include consideration of sector objectives, needs, resources, activities, existing and proposed preparedness measures, implementation responsibilities, and timing. Activity tables should be used. In addition, all objectives and activities detailed above need to reflect age, gender and diversity analysis and the High Commissioner’s policy priorities concerning women, children and the environment.

Part 5: Feedback, maintenance and future action

- Describe how the plan will be updated and revised.
- Who will be responsible for ensuring this will be done and how will the information be disseminated?

Part 6: Recommendations for preparedness measures

- Describe the preparedness measures envisaged and the timescale for having these in place.

Annexes to a contingency plan may include (but not limited to):

- i. List of Members of the Planning Group
- ii. Maps
- iii. Security plan
- iv. Registration forms
- v. Agency Profiles (details of staff, resources, future intentions)
- vi. Gap identification charts
- vii. Commodity matrix and specifications
- viii. Budgets
- ix. Other useful information

Note: As a general rule UNHCR integrates its contingency plans for refugee emergencies into Inter-Agency contingency plans as an Annex. A UNHCR contingency plan must be a component of other partner organizations’ plans and as such should be seen as ‘the refugee component’ of an Inter-Agency plan, not limited to refugee situations alone.

Introduction

1. Emergency assistance must be based on a sound, thorough initial participatory assessment of the refugees' most immediate protection problems and needs and the resources available to meet those needs.

2. The objective of the initial participatory assessment, which includes protection risk analysis and needs, is to provide UNHCR with a clear and concise picture of the emergency situation, in both quantitative and qualitative terms. It should provide enough information to predict the evolution of the emergency, be aware of protection risks, and begin building partnerships with refugees from the start. It is the basis for decisions which affect the future of the operation.

3. More detailed assessments will follow as the emergency develops and needs evolve: assessment never stops.

The initial, and subsequent, participatory assessments are intricately linked with, and will form the basis for, operations planning. The initial participatory assessment will also build on the contingency planning process.

4. The initial participatory assessment should:

- Answer the questions “What is the main problem?” and “Is there an emergency or not?”
- Provide sufficient information to decide whether UNHCR should be involved in the emergency response and what the scope of that involvement should be.
- Be an inter-agency initiative, but with one body providing the overall coordination. The inter-agency multifunctional team should include staff from UNHCR (preferably with solid experience in facilitating participatory assessment), the government and other potential partners (for example other UN agencies, NGOs). The inter-agency multifunctional team will carry out contingency planning and conduct the initial participatory assessment, and analyze protection risks. Often the people carrying out the initial participatory assessment will simultaneously be providing the initial response. Whenever possible, the multifunctional team should include those who will implement the emergency operation in the field.
- Be carried out quickly.
- Provide a full picture of the scope of the emergency, rather than focus on a limited area or sector (it is better to get the whole picture half right).
- Describe the people affected by the emergency (a simple demographic profile).
- Identify the coping abilities of the refugees themselves.
- Identify locally available resources.
- Identify what are the most immediate priorities and who is most at risk.
- Use agreed and appropriate standards against which needs can be measured.
- Involve the refugees, women, girls, boys and men, from the outset by using participatory assessment. Get to know them and understand their protection and immediate needs as they are a key source of information.
- Record the sources of information collected.
- Cross-check information, not relying on only one tool (e.g. aerial surveys cross-checked by on the ground observations and interviews).

- Involve appropriate technical input.
- Use samples and surveys rather than collect too much detailed information which is difficult to analyze.
- Produce recommendations for immediate action indicating the resources needed to implement them.
- Be able to trigger an immediate and effective response.
- Have the results shared promptly and widely.

5. The assessment should, as a minimum, answer the questions in the checklist in Annex 1. This includes essential minimum information required for planning an emergency operation.

6. The initial participatory assessment should focus on priority life threatening problems and protection risks which are usually in the sectors of protection (including SGBV), water, food, sanitation, shelter, health, and the environment. The assessment should measure the actual condition of the refugees against what is needed for their survival and immediate well-being (expressed as “standards”). In addition, it should clearly identify if there are specific groups with heightened risks and needs who require specific support. The resources at their disposal, such as natural resources, should also be assessed.

7. With respect to the environment, the initial emergency phase is the most critical period of an operational response. Decisions made at this time will have a major bearing on both the type and scale of environmental impacts in subsequent operational phases.

8. Some environmental damage is unavoidable during the initial emergency phase. However, where preliminary information indicates the potential for serious environmental impact(s), an environmental specialist should be included in the emergency team. The specialist should

conduct a rapid assessment, the findings of which should then be reflected in the basic set-up of the refugee camp.

9. In cases where a specialist has not been assigned to the team, one of the team members should be designated as the “Environmental Focal Point”. S/he would then be responsible for ensuring that environmental issues are considered during the development of activities.

10. Setting standards appropriate for the situation is an important prerequisite for needs assessment.

Standards provide a benchmark against which the condition of the refugees can be measured (for some of the minimum survival standards see Appendix 2, Table 1: Key Emergency Indicators). The standards established for emergency assistance must be consistent with the aim of ensuring the survival and basic well-being of the refugees, be fairly applied for all refugees and be respected by all involved.

11. The publication *The UNHCR Tool for Participatory Assessment in Operations* includes more detailed checklists for assessments and contains practical information on principles, planning, techniques, methods, and forms. Also see chapter 6 on operations planning for an example of a Gap Identification Chart, a useful tool for comparing needs and resources.

Organizing and planning the assessment

12. The initial participatory assessment must be carried out on the spot as soon as it is clear that a refugee emergency may exist. The assessment must involve (when possible) the government and other key actors as a part of a multifunctional team to conduct the assessment. Emergency team members should organize a multifunctional team on the ground to ensure interactive information-gathering with refugee women, girls, boys and men and

to ensure that the information is systematically shared, stored, and used for planning.

13. Immediate access to the area where the refugees are located is, of course, a prerequisite. Getting the assessment underway as soon as possible requires quick, practical steps: establish a presence at, or near, the refugee site for first hand information, discuss and engage with refugee women, girls, boys, and men, and use other available sources of information, mobilize local expertise and resources.

14. While an organized approach is necessary, and if UNHCR is already present, initial action must not be delayed pending the arrival of staff with more expertise.

A quick response to obviously urgent needs must never be delayed because a comprehensive assessment has not yet been completed.

Planning the Initial Participatory Assessment

15. Planning the initial participatory assessment involves setting the objectives, establishing the terms of reference and selecting multifunctional team members. The assessment plan should indicate which information should be collected and the report should make clear if it was not possible to collect that information.

If UNHCR is not already present in the country, the assessment mission will normally be organized by Headquarters.

16. Participatory assessment should start with a review of the existing background information (mission reports, media articles, situation reports, local maps). Ideally, a contingency plan would have been prepared and kept updated and would provide input for the assessment and the immediate response. UNHCR Headquarters – Field Information and Coordination Support Section (FICSS) - can provide maps and geographical information from a computerized database. The maps and

information can be tailored to the specific requirements of the assessment.

17. The participatory assessment should aim to begin building partnerships with refugees by holding separate discussions with women, girls, men and boys, in order to gather accurate information on the specific protection risks they face and the underlying causes in order to understand their resources and capacities and to hear their proposed solutions.

Implementing the Initial Participatory Assessment

18. The assessment should involve:

- i. mapping diversity
- ii. methods of inquiry
- iii. selecting themes
- iv. facilitating discussion
- v. systematizing information
- vi. follow-up actions

Mapping diversity

19. To map diversity, inter-agency multi-functional teams should identify the various social groups according to age, sex, ethnicity, power structures, power relations, and specific needs.

Methods of enquiry

20. Teams should decide when to use the appropriate methods for engaging with people concerned: observation and spot checks, semi-structured discussions and focus group discussions. Through observation visits teams can spontaneously ask questions to women, girls, men and boys about their difficulties to get topical understanding of protection problems and about how services and assistance should be designed. Teams should also organize a few discussions with people of concern through semi-structured/household discussions and focus-group discussions. These discussions need not take much time and they will reveal deep-seated protection risks.

Selecting themes

21. Considering the information gathered beforehand and the protection issues identified, teams can determine what kinds of themes should be discussed in separate meetings with refugee women, girls, men and boys of all backgrounds in order to understand their situation from their perspective: health, water, sanitation, food and security may be some of the most urgent topics to discuss.

Facilitating discussions

22. Engage in conversation with refugees on the selected theme by forming separate groups (no more than 10 persons per group) and discuss with them how they see and analyze their situation, protection risks, their capacities to cope, and the solutions they identify to their protection problems.

Systematizing information

23. Using the information gathered, review and discuss in a multifunctional team the data gathered during the discussions and fill out a systemization form (Annex 4 of this chapter) to use for planning the emergency and formulating emergency COP.

Follow-up actions

24. The multifunctional team should take immediate action, thinking preventively and follow-up on commitments and agreements made.

Initial Participatory Assessment tools

25. Tools commonly used in assessments are:

- i. questionnaires
- ii. checklists
- iii. visual inspection

26. A combination of tools is normally used in order to cross-check the conclusions. Questionnaires and checklists (see Annex 1 for a basic checklist and Annex 2 for participatory assessment checklist/steps) are particularly useful because they

standardize the approach and force the assessors to plan ahead and decide which information needs to be collected. Observation visits provide general information and can put into context data from more systematic assessments.

Immediate response

27. Gathering information about problems, needs and resources on the one hand, and the establishment of standards on the other, will allow the immediate unmet needs to be determined.

The most urgent actions must be taken with whatever local material and organizational resources are available, even if the information at hand is incomplete.

28. In order to ensure urgent survival needs are met, the most important initial actions are likely to be:

- i. ensuring the capacity to act
- ii. protection
- iii. organizational considerations

Ensure the capacity to act

29. The first priority is to provide the organizational capacity required to meet the needs of the emergency.

Sufficient UNHCR and implementing partner staff of the right calibre and experience must be deployed.

It may be necessary to invoke emergency procedures for the allocation of funds, implementing arrangements, food supply, local purchase, and recruitment of personnel. Along with the government, the resources of other UN organizations, particularly UNICEF and WFP, and of the NGO sector must be mobilized within the framework of a plan for immediate action.

Protection

30. Unless the refugees' right to asylum is assured there can be no assistance programme.

Action must be taken to assure the refugees' right to asylum and to ensure their security and fundamental human rights.

Specific measures may be needed, for example, to meet the special protection problems and needs of groups at risk (unaccompanied children, single young girls, minorities, etc.) and to protect the refugees against arbitrary actions of outsiders and against groups within their own community who may pose a threat to their safety.

31. In order to gain a better understanding of the protection problems faced by refugees, and other people of concern to UNHCR affected by displacement, they must be involved at the heart of decision-making concerning their protection and well-being. Specific measures may be needed, for example, to meet the special protection problems and needs of groups at risk (unaccompanied children, single young girls, minorities, etc.) and to protect the refugees against arbitrary actions of outsiders and against groups within their own number who may pose a threat to their safety.

Organizational considerations

32. UNHCR must establish a presence where the refugees are, with assured communications with the main office and with Headquarters. Organization of the necessary logistical capacity to deliver assistance will be of critical importance.

33. The priority, once problems and needs have been assessed, will be to provide vital assistance wherever the refugees are located. There will also, however, be key organizational or planning decisions to take, some of which may determine the future shape of the whole operation. These often include the points summarized below; decisions on them should be seen as a part of the immediate response.

If such decisions are not taken, or are wrong, they will be very difficult to correct later.

The location of the refugees

34. This will have a major influence on protection and indeed on all sectors of assistance. If the refugees have spontaneously settled in a scattered manner, they should not be brought together unless there are compelling reasons for breaking their present settlement pattern. If they are already in sites which are judged to be unsatisfactory, move them in coordination with the local authorities and government. The difficulty in moving refugees from an unsuitable site increases markedly with time. Even if those already there cannot be moved, divert new arrivals elsewhere (see chapter 12 on site planning).

Control at the sites

35. Determine the optimum population in advance and plan for new sites accordingly. Keep careful control of actual occupation of the site as refugees arrive, so that sections prepared in advance are filled in an orderly manner.

Numbers and registration

36. An accurate estimate of numbers is a prerequisite for effective protection and assistance. Family registration is a minimum requirement in order to deliver help efficiently to all in need and should be organized as soon as possible. Nevertheless the initial provision of assistance may have to be based on a population estimation rather than full registration (see chapters 11 and 13 on registration and commodity distribution).

Urgent survival needs

37. Meet the most urgent survival needs: food, water, emergency shelter, health care and sanitation, ensuring fair distribution:

- i. Involve the refugee women and men and promote their self-reliance from the start. If this is not done, the effectiveness of the emergency assistance will be severely reduced and an

- early opportunity to help the refugees to start to recover from the psychological effects of their ordeal may be missed.
- ii. Food: ensure that at least the minimum need for energy is met, a full ration can follow. Set up special feeding programmes if there are clear indications of malnutrition. Establish storage facilities.
 - iii. Water: protect existing water sources from pollution and establish maximum storage capacity with the simplest available means. Transport water to the site if the need cannot otherwise be met. Check how groups with specific needs transport their water.
 - iv. Emergency shelter: meet the need for roofing and other materials from local sources if possible. Request outside supplies (e.g. plastic sheeting) if necessary.
 - v. Health care: provide the necessary organizational assistance, health personnel and basic drugs and equipment, including for reproductive healthcare, in close consultation with the national health authorities. Although the immediate need and demand may be for curative care, do not neglect preventive and particularly environmental health measures. Ensure female to female health services.
 - vi. Sanitation: isolate human excreta from sources of water and accommodation.
38. Take steps to meet social needs and reunite families if necessary. Surveys may be necessary to identify people in need but who often do not voluntarily come forward. Tracing may be required particularly for unaccompanied and separated children. If groups of refugees have been separated, they should be reunited. Special measures to ensure the care of any unaccompanied children will be a priority.
39. Once these and other priority measures are underway, begin the wider planning process.

UNHCR Tool for Participatory Assessment in Operations (2006)

Annex 1 – Checklist for Initial Participatory Assessment

This checklist is based on a refugee influx, it should be modified in the light of the actual nature of the emergency.

Who are the refugees, their numbers, and pattern of arrival

- Approximately how many refugees are there?
- Where have the refugees come from? Why?
- What is the rate of arrival? Is it likely to increase or decrease?
- What is the total number likely to arrive?
- What is the location of the arrival points and of the sites where people are settling (latitude and longitude)?
- Are the refugees arriving as individuals or in groups? Are these family groups, clans, tribal, ethnic or village groups?
- Are families, village groups and communities intact?
- How are the refugees organized? Are there group or community female/male leaders?
- How are the refugees traveling – on foot, in vehicles?
- What is the sex ratio of the population?
- What is the age profile of the population? Can a breakdown by age and sex be given – under five's, age 5 to 17 years, 18 years and over?
- How many unaccompanied and separated children (by age and sex) are there? What is their condition?
- What was the social and economic situation of the refugee women and men prior to their flight?
- What are their skills and languages? What is their ethnic and cultural background?
- Are there individuals or groups with specific needs? Are there particular groups at more risk by the situation? (e.g. persons with disabilities, unaccompanied and separated children or older people in need of support).
- What are the diet, shelter, and sanitation practices of the refugees?
- What is the security situation within the population – is there a need for separation between different groups, are there armed groups within the population?
- Are single women protected or is there a need for special consideration in camp design or shelter provision?
- What is the formal legal status of the refugees?

Characteristics of the location

- What are the physical characteristics of the area where the refugees are located?
- What is the soil, topography and drainage?
- Is there enough space for those there and those likely to arrive?
- Is there all season accessibility?
- Can the refugees access relief assistance from where they are located?
- What is the vegetation cover?
- Will the refugees need to use wood for fuel and shelter? Will this cause tension with the locals?

- Approximately how many people already live in the local area?
- Who owns (or has usage rights on) the land?
- Is there grazing land and are there potential areas for cultivation?
- What is the actual or likely impact on the local population and what is their attitude and that of the local authorities towards the refugees?
- Are there security problems? If so, are they different for men and women?
- What environmental factors must be taken into account (e.g. fragility of the local environment and extent to which local community relies on it; how rapidly might it be degraded by the refugees, proximity to protected areas)?
- What is the condition of the local population? If assistance is provided to the refugees, should the local population also be assisted?
- How will fuel be accessed? If it is firewood collection, who collects it and what protection risks are they facing?
- Who collects water and does this present protection risks?

Health status and basic problems (please also see chapter 14 on Health)

- Are there significant numbers of sick or injured persons, is there excess mortality?
- Are there signs of malnutrition? If so, is it different by age and sex?
- Do the refugees have access to sufficient quantities of safe water?
- Do the refugees have food stocks, for how long will they last?
- Do the refugees have adequate shelter? Is there a need to give consideration to child-headed households, older persons etc.?
- What sanitary materials do women and girls use and how can they be best provided?
- Do the refugees have basic domestic items?
- Is there sufficient fuel for cooking and heating?

Resources, spontaneous arrangements and assistance being delivered

- What type and quantity of possessions have the refugees brought with them?
- What arrangements have the refugees already made to meet their most immediate needs? And is it damaging to the immediate environment?
- What assistance is already being provided by the local population, the government, UN organizations and other organizations, is the assistance adequate, sustainable?
- Is the present assistance likely to increase, continue, decrease?
- What is the government's policy on assistance to the refugees?
- Are there any major constraints likely to affect an assistance operation?
- Has contingency planning for this type of emergency been undertaken?
- What coordination and implementation arrangements are required?
- How will the community participate and what, if any, specific measures are required to support women?

Means to deliver protection and assistance

- Can effective implementing arrangements be made quickly and locally? If not, what are the alternatives?
- Is there already an identified refugee leadership with whom it will be possible to coordinate the delivery of protection and assistance? Is the leadership representative and fair to men and women?
- What are the logistical needs and how can they be met?
- Where will the necessary supplies come from?
- How will they reach the refugees?
- How will distribution be monitored?
- What storage is needed, where and how?
- Are there essential items which can only be obtained outside the region and whose early supply will be of critical importance (e.g. food, trucks, shelter materials?)
- What are the needs for UNHCR and implementing partner staff and staff support?

Annex 2: Potential protection risks: a non-exhaustive list

General profiles

- gender (where there is gender discrimination);
- age group;
- stage in the refugee cycle (new arrivals, earlier arrivals);
- socio-economic group (poorest, middle-income, highest-income);
- ethnicity (in relation to other more dominant groups or in relation to host communities);
- religion (where different from other groups or the host population);
- type of household (extended family, single-headed, grandparent-headed, etc.);
- location in camp/area (proximity to police posts, proximity to the periphery, danger points);
- health status (malnutrition, poor health, chronic illness, disabilities, etc.);
- educational level (literacy, skills, including language skills);
- livelihood activities, access to and control over resources.

Physical risks:

- refoulement;
- arbitrary arrest/detention;
- torture, abduction;
- inadequate shelter, inadequate heat, clothing;
- inadequate food and/or means of its preparation;
- inadequate quantity and quality of water per person;
- inadequate availability of firewood;
- severe health risks and epidemics, inadequate access to medical services;
- political violence;
- physical violence, sexual and gender-based exploitation and violence;
- forced military recruitment;

- rape (in camp/prison, during flight, or in host country);
- domestic violence, abuse, neglect;
- early pregnancies;
- natural disasters (fire, flood, earthquake, landslides, etc.)
- trafficking.

Social risks:

- lack of recognition as a person, absence of documentation (identity, birth, marriage papers, etc.);
- lack of access to refugee registration process;
- social discrimination/exclusion;
- sexual exploitation, risk of forced prostitution;
- discriminatory practices on the basis of gender, age, religion, tribe, clan, political affiliation, etc.
- exposure to abuse and exploitation, particularly of children, youth, unaccompanied and separated children;
- separation of children (female and male) from their families;
- lack of access to basic education;
- disability;
- forced interruption of education, exclusion, marginalization;
- forced military recruitment.

Economic risks:

- no access to a means of livelihood (e.g. employment, piecework, agriculture);
- single parents looking after young children unable to leave the home to find work outside;
- lack of labour power – those who are incapable of work and not living with relatives are likely to suffer more than the rest of the population of concern;
- exploitation of refugee labour by local or refugee employers;
- exploitation of refugee labour by local officials, etc.

Potential risks associated with cultural practices:

- female genital mutilation, early marriage, bride price, etc.;
- traditional justice systems.

Annex 3 – Themes and sample questions on protection risks

Livelihoods

- What skills do women and men have that will enable them to earn an income?
- How much time do women and men have to engage in income-generating activities?
- Who does what in the community and how much time does it take?
- Do women face problems of lack of access to markets, supplies, technology, credit, skills training, and information, and lack of decision-making powers? Do men face similar problems?
- Who has access to various resources (e.g. who has jobs, access to markets, access to materials such as firewood)?
- Who decides how resources are used? Who decides to integrate locally and who decides to return?
- What is the impact of these problems on girls, boys, adolescents, women, men?

Education

- What do girls and boys do with their time?
- Who goes to school? Who does not get to go to school?
- What do girls who do not go to school do with their time? And boys?
- What do girls who do go to school do outside school? And boys?
- Are you afraid (are your children afraid) of going to school or of anything at school?
- Who stays at home? Who is in charge? What is the impact on the family?
- How are girls and boys looked after if they remain behind to attend school when the parents return home?

Community participation

- Do women participate in committees? Why not or how often? Do children participate in committees?
- Can women make decisions? What do women think about that? And men? What is the impact in the community?
- What would women and men like to do differently? How would you go about change?
- How do women and men participate in reconstruction of their home country or in decision-making when settling locally?

Health/food/nutrition/water/shelter

- What types of health problems are most widespread in the community?
- Who takes care of people when they get sick?
- Who do people go to see when they are not well? What happens if they get sick at night or over the weekend? What types of health problems are covered? Which are not covered?
- Are there children in the community who do not get appropriate food? Other persons without proper/enough food? Are there malnourished children in the community? How are they treated? Can we visit them?
- Do pregnant and lactating women eat differently from other household members?

- How do you use water? How do you maintain personal/community hygiene?
- How could houses and neighborhoods be kept clean so as to avoid health risks? What is the lay-out/design of living arrangements? Town/camp?

Security and safety

- What are the dangers that you experience in this environment?
- Do you feel that your physical safety and security are at risk? At what time? Why?
- What is the source of the danger? Who is involved?
- What do you worry about when you leave your home?
- What do you worry about for your children/husband/wife?
- Are you aware of any incidents/problems that have threatened your friends or neighbours?
- How can you put a stop to domestic violence?
- Does violence occur? What types of violence?
- What do men think about it? And women? Girls and boys? What do you think about it?
- What can be done about it?
- Where does the violence occur? (See below.)

Coping with risks and developing solutions

- How do you think the situation could be improved? How do you and your neighbours cope with these risks?
- What do you do to protect your children?
- What services or activities are available to you to help address these risks? How can they help?
- How in your culture/traditions were such problems dealt with/avoided before your displacement? How can that can be applied now?
- Would you be willing to help in improving the situation? How do you think you could help?

Prioritizing risks:

- Of all the issues just discussed, which do you consider the most important/urgent?
- Who should be involved?
- What might the community do to address this concern?

Introduction

1. An emergency response requires good planning. An important aspect of planning, particularly in an emergency situation, is the development of an operations plan. The “Operations Plan” is a vital management tool which should be based on a problems, needs and resources assessment.

The plan should determine programme priorities, set objectives, and specify actions that need to be taken by the actors responsible for the various sectors of an operation.

Specific tasks in an emergency and the parties responsible for the implementation of these tasks need to be clearly identified and a plan formulated in a clear and concrete way.

At the start of an emergency there is a tendency to postpone planning, both because information is not available and because there are obvious urgent needs which can be met piecemeal, without a plan. This tendency should be resisted.

2. The more critical the situation, the more important it is for the operations manager to find the time to take stock, determine priorities and develop a plan for what needs to be done, when, by whom and how.

3. Ideally, the operations plan should make use of the contingency planning process, partners identified, and resources prepared, as well as the plan itself. As the same principles of planning apply, the structure of the operations plan can be based on the contingency plan (also attached here as Annex 1). There are a range of additional considerations beyond what is included in the Contingency planning format, many of which will be addressed over time. However, the main differences between contingency planning and operations planning and the characteristics of a good plan are discussed in chapter 4 on

contingency planning. The tasks and approach will be different primarily because of assessments – in operations planning, the starting point is known and assessments of the situation replace the contingency planning scenarios and many of the assumptions.

4. The participatory assessment with refugees should form the basis for the operations plan. They are the single most important resource in meeting their own needs, and will have definite ideas on how this may best be done. The plan must strengthen the refugees’ own resources and self-reliance and avoid creating dependency. The plan should also reflect the aim of a durable solution.

5. The operations plan must be comprehensive, identifying all problems, needs and resources whether these are met through UNHCR or by other organizations and sources of funds. Drawing up the operations plan should be a multi-functional team effort. Clear direction must, however, come from the government and/or UNHCR.

The most effective operations plans are those developed by or with the people who will implement them.

6. Although the plan should be comprehensive, this should be balanced by the need to produce the plan quickly, so that in rapidly evolving emergencies the plan will not become outdated before it is finished. In addition, lengthy plans can be difficult to update. Characteristics of a good plan are discussed in paragraphs 23 to 25 of chapter 4 on contingency planning.

7. It should be stressed that, as with contingency planning, operations planning is a process.

A plan, as a document, represents the outcome of the process. It should be kept updated in light of the evolving situation: implementation of the plan should

be monitored and corrective action taken, and the plan should then be adjusted and revised. The operations plan must be made available to all who need it.

8. This chapter focuses on operation plans developed with partners. However, planning within the office should not be neglected. Simple plans of action at each administrative or office level within UNHCR should also be drawn up, from site to Headquarters, tying in with the overall operations plan and involving the same principles. These are: clarifying objectives, allocating responsibilities, defining activities to achieve objectives, and defining coordination mechanisms such as staff meetings (discussed in chapter 20 on administration and staffing).

Operations planning tasks

9. Operations planning involves the tasks set out below:

- i. *Review existing plans and information in the contingency plan;*
- ii. *Assess problems, protection risks needs and resources: identify critical unmet needs using age, gender and diversity analysis.*

The problems, protection risks, needs and resource participatory assessments determine what must be done, and where the priorities are; this is part of planning. Plans must be updated to take account of new assessments and progress in implementation. Identify critical unmet needs using the results of the participatory assessments and compare these with established standards – the determination of the standards to which assistance should be delivered is of fundamental importance. The resources which are available and those that are required must also be identified. Resources includes human resources, and personnel, local and international implementing and operational partners including material resources.

At the early stages of a major emergency, it is unlikely that resources will be sufficient to meet all needs, thus prioritization with the refugees will be an important part of operations planning.

iii. *Set overall goals*

The overall operation and strategic goals must be protection based and defined and clarified. All other objectives and activities should be consistent with these overall objectives. In formulating objectives, the single most important question to ask is, “What is the intended result?” Objectives should be specific, measurable, achievable and realistic, and the time frame within which they should be reached should be specified.

iv. *Clarify planning assumptions*

It will also be necessary to clarify the main constraints, planning assumptions and principles behind the emergency operation. These should be set out explicitly, including an explanation of the role, responsibilities and policies of the government, UNHCR, other UN organizations and operational partners. In addition, standard or established procedures, such as monitoring and coordination mechanisms, MOUs etc. should also be set out. Similarly, standards in various sectors and any specific guidelines necessary should be specified (where the plan includes objectives, outputs and activities on a sector by sector basis). Although these issues should have been in the contingency plan, they will need to be revisited in the light of the problem and needs assessments, and restated as necessary to new partners, so everyone is working with the same assumptions and to the same standards.

v. *Determine the courses of action to reach overall objectives (implementing arrangements)*

Consider various options to reach objectives, their advantages and disadvantages; which are flexible, which are the most efficient and effective? Choosing an option

for implementing arrangements which retains flexibility is important in a rapidly changing situation. Chapter 8 on implementing arrangements discusses this in more detail.

vi. Determine objectives and courses of action to reach objectives at sector level

Decide on the objectives, activities and outputs for each sector. As with contingency planning, this is the most detailed part of the plan. The organization with operational responsibility for a particular sector or site should draw up the plan of action for that sector or site. Ensure that each sector clearly outlines how the different needs of women, girls, boys and men will be met and highlight targeted action to empower women and other discriminated groups.

vii. Allocate responsibilities

Responsibilities, both within UNHCR and between different actors in the operation, need to be clearly stated.

viii. Determine coordination mechanisms

Coordination mechanisms should be established between the different actors in the operation. Coordination at different geographical levels (e.g. at the site and in the capital or regional city) needs also to be assured. In a large operation, it may be necessary to have separate coordination mechanisms for sectors.

ix. Determine monitoring mechanisms

From the start, the management of a refugee emergency must include continuous monitoring (by measuring the indicators of performance) together with the community, reporting and evaluation in order to ensure that the objectives remain appropriate as circumstances change, and the activities to fulfill the objectives are being carried out effectively.

x. Record and disseminate the plan, monitor progress, take corrective action, and adjust and revise the plan

Effective Planning Guidelines for UNHCR Teams (updated in June 1999) provides the most effective and efficient way on managing the planning process at all levels of an operation. The assumption is that better planning processes lead to better quality results delivered on time, in a cost effective manner.

Allocation of responsibilities

Gap identification chart

10. A gap identification chart is a simple but very important and useful tool to allocate responsibilities effectively and identify the critical unmet needs of the refugees site by site and sector by sector. It illustrates who is responsible for what in an operation (by site and sector) and points out gaps where a sector or site needs attention. Figure 1 shows an example where the blanks indicate “gaps” i.e. sites or sectors for which nobody has responsibility. These would need to be given priority attention. Annex 2 shows a blank chart that can be used.

Roles and tasks

11. The roles and tasks of all involved must be clearly stated. Delay in defining responsibility usually leads to each party defining goals independently and setting their own limits of responsibility. This in turn can lead quickly to confusion, gaps and duplication. Responsibilities should be defined for each administrative level, and for both organizations and individuals. How responsibilities are allocated to individuals is discussed in chapter 20 on administration and staffing.

12. Responsibilities are allocated to different organizations in a refugee emergency primarily through organizations’ mandates, international instruments and pre-existing MOUs between organizations.

13. The responsibilities and roles, in response to the specific needs of the emergency situation and capacities of the dif-

ferent parties, are defined in more detail on the ground. These are set out in implementing agreements with implementing partners, MOUs and exchange of letters with other UN agencies, and agreements with the government.

If formal agreements have not yet been drawn up and the basis of cooperation remains a Letter of Intent, the definition of responsibilities contained in the operations plan is to be considered the primary reference.

See Annex 1 of the chapter 8 implementing arrangements for a format of a Letter of Intent.

14. The responsibilities of organizations delivering assistance but which are not implementing partners of UNHCR must also be defined. This may create problems, particularly where individual NGOs wish to have responsibility for a specific sector. Final authority rests with the government, and the Representative or the operations manager should consult closely with the authorities. To the extent possible, however, any conflict of interest should be resolved within the framework of a coordinating mechanism.

Annex 1 – A model structure for an operations plan

Based on the problem, needs and resources assessments

The following is a proposed structure for an operations plan. It is based on a refugee influx. Adaptation will naturally be required for different situations.

Chapter 1: General situation

- i. Background, country information and results of participatory assessments by age and sex
- ii. Entry points
- iii. Agreed planning figures
- iv. Arrival rate
- v. Reception and in-country movement
- vi. Settlement arrangements
- vii. Demographic profile of the refugees, including data disaggregates by age and sex

Chapter 2: Policies and overall operation objectives

- i. Overall policy (strategic) objectives of the programme
- ii. Comments on policy stance of various partners

Chapter 3: Objectives and activities by sector

- i. Management and overall coordination; allocation of responsibilities
- ii. Protection, reception, registration, security
- iii. Identification of groups with specific
- iv. Food
- v. Logistics and transport
- vi. Infrastructure and site planning
- vii. Shelter
- viii. Domestic needs, sanitary materials and household support
- ix. Water
- x. Environmental sanitation
- xi. Health and nutrition
- xii. Community-based activities
- xiii. Prevention and response to SGBV
- xiv. Education
- xv. Economic activities
- xvi. Support to the operation, administration, communications, staff support and safety

Each section should include overall sector objectives, and site by site objectives and outputs, problems, needs, resources, financial requirements, activities, implementation responsibilities and timing.

Chapter 4: Procedures for updating the operations plan

Describe how the plan will be updated, who will be responsible for ensuring this and how the information will be disseminated.

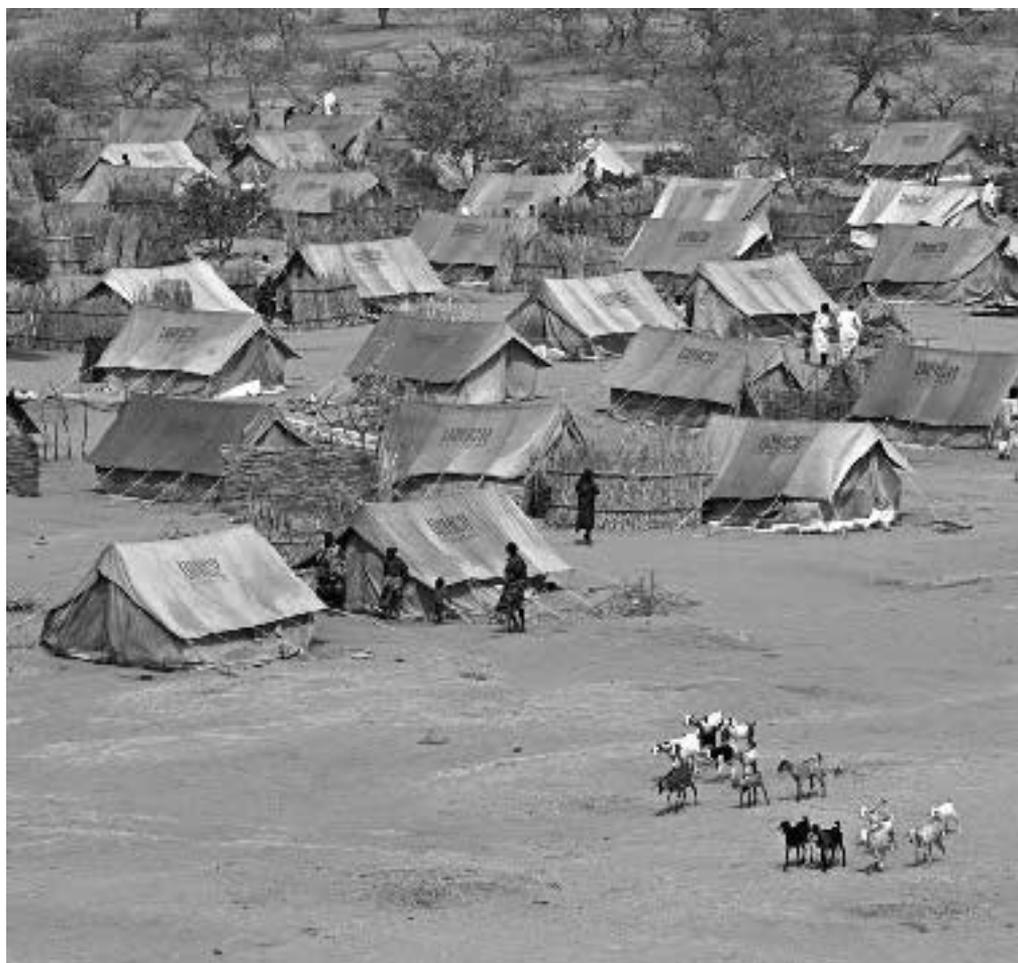

Possible annexes

- i. Maps
- ii. Registration forms
- iii. List of organizations or individuals participating in the operation
- iv. Agency profiles (details of staff and resources involved in the operation)
- v. Gap identification charts
- vi. Commodity specifications
- vii. Budgets

Introduction

1. Coordination can be defined as the harmonious and effective interaction of people and organizations towards a common goal.
2. Good coordination should result in:
 - i. maximum impact for a given level of resources;
 - ii. elimination of gaps and overlaps in services;
 - iii. appropriate division of responsibilities; and
 - iv. uniform treatment and standards of protection and services for all the beneficiaries.
3. For effective coordination appropriate approaches and structures will need to be put in place at the various levels. Coordination requires good management and clearly defined objectives, responsibilities and authority.

Coordination is not free: it has costs in terms of time and other resources needed to make it work.

Coordination of the UN response to refugee emergencies

4. Within the UN system the responsibility for refugees lies with UNHCR. Therefore, in refugee emergencies UNHCR should take the lead to ensure effective coordination and is responsible for coordinating the response of the UN system to the emergency.

Mechanisms for coordination in refugee emergencies

5. Effective coordination is the result of sound management. Coordination mechanisms set up without the establishment of clear objectives and assignment of responsibility and authority will be ineffective. Coordination must be based on good information exchange, particularly with

the site level, otherwise it may even be counter-productive.

6. Mechanisms for coordination include:
 - i. international and regional instruments and agreements which define responsibilities and roles at the global (and sometimes regional or country) level;
 - ii. Memoranda of Understanding and exchange of letters with other agencies, and agreements with implementing partners and host governments, defining responsibilities and roles at the situational level;
 - iii. a coordinating body;
 - iv. sectoral committees as necessary;
 - v. regular meetings;
 - vi. reporting and information sharing;
 - vii. joint services and facilities, for example, vehicle repair services, communications, and a joint staff security group; and
 - viii. codes of conduct for organizations working in humanitarian emergencies.

7. Whatever the implementing arrangements, a single coordinating body should be established for the operation – for example, a task force, commission, or operations centre.

8. The coordinating body will provide a framework within which the implementation of the programme can be coordinated and management decisions taken. The coordinating body should have clearly defined and well promulgated responsibility and authority.

9. The elements of a coordinating body, including membership and functions, are described in Annex 1. Tips for running meetings, including coordinating meetings are given in Annex 2.

10. Where a coordinating structure does not already exist, UNHCR should, in cooperation with the government, take the lead in setting up the coordinating body

and mechanism. This is a crucial component of UNHCR's leadership role. The coordinating body may be set up and chaired by the government with strong support from UNHCR, or be co-chaired by the government and UNHCR, or be chaired by UNHCR alone.

11. The membership of the coordinating body should include government ministries and departments, as well as other UN agencies, NGOs and other concerned organizations. It is important to coordinate the activity of all NGOs – whether they have entered into an implementing agreement with UNHCR or not. In a large scale emergency with a number of actors, the coordinating body could become unwieldy. However, it should still be possible to ensure some degree of representation or participation on the coordinating body by all actors either directly, or on sectoral committees, or through close working partners who are represented on the coordinating body.

12. The coordinating body should hold regular, formal meetings during which overall progress is reviewed and plans adjusted. These meetings should be complemented by informal contacts with members of the coordinating body.

13. When required, the coordinating body should create sectoral committees, for example for health and nutrition. Such committees will be responsible for coordinating implementation in that sector and reporting back to the coordinating body. They could also play an important part in the development of specific standards for the delivery of assistance. When the operation is sufficiently large, a sectoral committee could be coordinated by a UNHCR sector coordinator.

14. A coordinating body can also be of considerable value when new agencies arrive, both in integrating their assistance in the overall programme and with practical administrative arrangements and briefing.

15. Coordination must be based on good information exchange, particularly with the site level. The framework for the organization and coordinating mechanisms at the site level is likely to broadly reflect that established centrally. To get information passed vertically between central level and site level can be as hard as getting information passed between organizations. Each organization should be responsible for ensuring that there is good communication between its staff at site level and centrally, and that important information is then passed on to the coordination body.

The collaborative response to Internally Displaced Persons (IDPs) and other complex emergencies

16. Other than refugee emergencies, UNHCR might be called upon to operate in situations of internal displacement caused by conflict and so-called “complex emergencies”. The “Guiding Principles¹ on Internal Displacement” define internally displaced persons as individuals or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of or in order to avoid the effects of armed conflict, situations of generalized violence, violations of human rights or natural or human-made disasters, and who have not crossed an internationally recognized State border. A complex emergency can be defined as: **a multi-faceted humanitarian crisis in a country, region or society where there is a total or considerable breakdown of authority resulting from internal or external conflict, sometimes compounded by natural calamities and which requires**

¹ Unlike in the case of refugees there are no specific conventions relating to the status, rights and duties of IDPs as well as the roles, responsibilities, and mandates of governments and international organizations towards IDPs. The full text of the “Guiding Principles on Internal Displacement” can be found on RefWorld (CD-ROM and on www.unhcr.org/refworld).

an international response that goes beyond the mandate or capacity of any single agency and/or the ongoing UN country programme.

17. Likely characteristics of both Internally Displaced Persons and complex emergencies include:

- i. a large number of civilian victims, populations who are besieged or displaced;
- ii. human suffering on a major scale;
- iii. substantial international assistance is needed and the response goes beyond the mandate or capacity of any one agency;
- iv. delivery of humanitarian assistance is impeded or prevented by parties to the conflict;
- v. high security risks for relief workers providing humanitarian assistance; and
- vi. relief workers targeted by parties to the conflict.

18. In complex emergencies involving refugees and mixed IDP-refugee caseloads, UNHCR will remain solely responsible for protection and assistance activities on behalf of the refugees. As the cluster lead, UNHCR might either directly assume or delegate to another agency the responsibility for a) protection, b) emergency shelter, and c) camp coordination and camp management for conflict generated IDPs.

However, it remains accountable to the ERC that effective protection and assistance is being delivered.

The cluster approach

Introduction

19. In 2005, in the context of UN reform, a review was undertaken which found that the humanitarian response to crisis situations is sometimes slow, inadequate and unpredictable. The review confirmed capacity gaps in key sectors and recognized need for improved cooperation and

partnerships between the agencies of the UN system, the Red Cross/Red Crescent movement and Non-Government Organizations (NGOs). In order to build a stronger and more predictable standing humanitarian response system the “Cluster” approach was introduced for new major emergencies. Under this framework the following clusters and “cluster leads” were designated:

Cluster Field	Cluster Lead
Nutrition	UNICEF
Water and sanitation	UNICEF
Health	WHO
Camp coordination and management	UNHCR (For conflict-generated IDPs) IOM (For natural-disaster generated IDPs)
Emergency shelter	UNHCR (For conflict-generated IDPs) IFRC(For natural-disaster generated IDPs)
Protection subgroups	UNHCR (For conflict-generated IDPs) IFRC(For natural-disaster generated IDPs)
Logistics	WFP
Telecoms	OCHA for overall Process Owner UNICEF for Common Data Services WFP for Common Security Telecommunications Service
Early Recovery	UNDP

Responsibilities of the cluster lead

20. The general responsibility and accountability of cluster leads entails:

- i. preparedness for response to new crisis and certain current crisis;
- ii. capacity assessment and developing capacity within the cluster; and
- iii. commitments to contribute to these functions and mechanisms for delivering on commitments.

21. As the “port of first call and the provider of last resort” the cluster lead is

responsible for providing an adequate response to the needs of the beneficiaries in a given cluster.

However, the cluster lead might delegate its lead and coordination role at the Field level to another agency which is better placed to perform its duties.

The cluster lead also needs to engage and mobilize all members of the cluster in a collegial and collaborative manner in order to provide effective protection and assistance to IDPs.

Accountability

22. At the global level, cluster leads are accountable to the Emergency Relief Coordinator. At the country level, however, cluster leads are accountable to the Humanitarian Coordinator for ensuring adequate preparedness and effective responses in the sectors or areas of activity concerned.

23. The Emergency Relief Coordinator (ERC), appoints a “Humanitarian Coordinator” for countries facing an IDP situation or a complex emergency, and is supported by the Office for the Coordination of Humanitarian Affairs (OCHA). At the country level, the Humanitarian Coordinator retains overall responsibility for ensuring the effectiveness of the humanitarian response and is accountable to the Emergency Relief Coordinator (ERC).

24. Other partners of the collaborative approach are the government and local authorities, the IASC Country Team, i.e. the UN agencies, international organisations, Red Cross/Crescent Movement, and international and local NGOs, donors and bilateral agencies.

25. The UNHCR Representative remains directly responsible to the High Commissioner on all issues related to the UNHCR country programme, as well as policy matters and issues related to UNHCR’s mandate.

The protection of refugees must remain the sole prerogative of the High Commissioner. However, in his/her capacity as “cluster lead” the UNHCR Representative supports the Humanitarian Coordinator and the Inter-Agency Standing Committee Country Team.

26. In whatever function and situation, it is important to understand that UNHCR, as part of the UN system, has to be an effective team player that delivers on the commitments made by the High Commissioner in the UN and Humanitarian Reform process. As a member in all relevant clusters it has to support their respective leads. As a cluster lead itself, UNHCR has to discharge its functions effectively and with full respect to the mandates, capacities, and cultures of the other partner organizations. It has to show due respect to the national authorities and should not attempt, willing or unwillingly, to assume roles and responsibilities which rest with the authorities.

Organization at the site level

Introduction

27. The framework for the organization and coordinating mechanisms at the site level are likely to reflect broadly those established centrally. However, there is one fundamental difference between the site and central levels: at the site level the refugees themselves should play a major role.

The organization of the humanitarian response should support the refugee community to enhance their own abilities to provide for themselves.

28. A clear understanding of the aims and objectives of the emergency operation and proper coordination are even more important at the site level than centrally, for it is here that failures and misunderstandings will directly affect the refugees.

Of particular importance will be the adoption of common standards when a number of organizations are providing similar assistance.

Regular meetings of those concerned are essential. There should be an overall coordinating mechanism chaired by the government authority, UNHCR and/or an operational partner, and this mechanism may be complemented by sectoral/cluster committees.

29. Certain activities are interdependent or have a common component and will need particularly close coordination at site level. For example, environmental sanitation measures must be closely coordinated with health services, and the home visiting component of health care with feeding programmes and community services.

30. A rapid changeover of outside personnel can create major problems for site level coordination, though some specialists may obviously be required for short periods. The importance of continuity is proportional to the closeness of contact with the refugees. Operational partners at the site should have a standard orientation and briefing procedure to ensure continuity of action and policy despite changes in personnel.

Community organization

31. The importance of preserving and promoting a sense of community is stressed in chapters 11 and 12 on community based approach and community services and site selection/planning. The approach to thinking about and understanding site and community organization should be from the smallest unit – the family – upwards, rather than imposed from the largest unit downwards, which would be unlikely to reflect natural or existing community structures and concerns.

32. The basic planning unit for site organization and management is likely therefore to be the family, subject to

traditional social patterns, and changes caused by displacement (e.g. numbers of unaccompanied and separated child and grandparent headed households, single women, especially women). Larger units for organizational and representational purposes will again follow the community structure. For example, the next level up is likely to be community units of about 80 to 100 people, grouped according to living arrangements, followed by groups of communities of about 1,000 people. It is important to respect the needs of minority groups and be sensitive to any tension in the city. Different settlement services are decentralized to these different levels – e.g. water and latrines at household level, and education and health facilities at community and larger levels. The physical layout of the site will have a major influence on social organization.

Generally, the smaller the settlement the better – the overriding aim should be to avoid high density, large camps

Community participation

33. Refugee women, girls, men and boys must be involved in designing and planning measures to meet their needs and in implementing those measures. The way the community is organized can help ensure that the refugees' specific skills are made use of and that the personnel for services at the site will come from the refugees.

34. There are three levels of refugee involvement. The first is in the overall planning and organization, for example the determination of what is the best, and culturally most appropriate, solution to a problem, given the constraints of the situation. This level requires that the refugees have a social organization within their community that is properly representative of women and men of all age groups and backgrounds. As the previous social structures may have been severely disrupted, this may take time to re-build but will be

important to the success of the emergency operation and for the future of the refugees. Meanwhile, urgent action to meet evident needs must of, course, be taken.

35. The second level of involvement is in the practical engagement of refugees' skills and resources wherever possible in the implementation of the operation. The refugees themselves should run their own community as far as possible but special attention is required to ensure respect for individual rights and gender equality. Where suitably qualified or experienced refugees exist, such as nurses, teachers and traditional health workers, they must obviously be involved. Where they do not, outside assistance should ensure that refugees are trained to take over from those who are temporarily filling the gap. Other services include feeding programmes, sanitation, (maintenance and cleaning of latrines, drainage, garbage disposal, vector control, etc.) construction (shelters and communal buildings) education, tracing and general administration. Note that an outreach programme to identify women and adolescents, who often have the necessary skills, might be necessary.

36. At the same time, other traditional skills – for example in construction or well-digging – should be harnessed. It is important to study roles and responsibilities to see what women and men do to ensure implementation builds on these skills and supports gender equality. While specific measures to develop self-reliance will vary with each situation, their aim should always be to avoid or reduce the refugees' dependence on outside assistance. The more successful measures are generally those based on methods and practices familiar to the refugees.

37. The third level is in providing information to the community on life in their new situation, which may be markedly different from their previous experience. Public health education in such matters as the importance of hygiene in crowded

conditions, mother and child care and the use of unfamiliar latrines is an example. As another example, if unfamiliar foods or preparation methods have to be used, then immediate practical instruction is essential. Information and guidance of this sort are best given by the refugees themselves (including women and youth), with outside assistance. Information and increased awareness regarding their rights and obligations and the roles of the different actors protecting and assisting them is essential.

Refugee representation

38. Refugee settlements are not, typically, simple replicas of former community life, and large numbers of refugees may be living temporarily outside their traditional community leadership structures. However, in nearly every emergency, some refugee leaders, spokespersons, or respected elders will be present. It will be necessary to define with the community the method of choosing leaders to ensure fair representation with gender parity and meaningful participation in both the planning and implementation of the emergency programme. The more the settlement differs from former community life, the more important this action is likely to be to the success of the programme.

However, be aware that some new power structures might emerge, for example through force, and may exercise de facto control over the population, but may not be representative.

39. The system of refugee representation should:

- i. Be truly representative of the different interests and sectors of the community, and of both men and women.
- ii. Include various levels of representatives and leaders to ensure adequate representation and access for individual refugees particularly minority groups and those with specific needs.

- iii. Avoid unconscious bias, for example on the basis of language. Bear in mind that there is no reason why a refugee should be representative of the community simply because he or she has a common language with those providing outside assistance.
- iv. Be based on traditional leadership systems as much as possible but provided these allow proper representation (for example, if the traditional leadership system excludes women, there should nevertheless be women representatives) and the system respects the rights of individual members of the city.
- v. Be consistent with the physical divisions in the layout of the site.
- vi. Represent the interests for children and include adolescent girls and boys.

Camp coordination and camp management in IDP situations

Introduction

40. Although UNHCR is the designated cluster lead for Camp Coordination and Camp Management (CCCM), in reality, there are at least three main actors with specific roles and responsibilities:

Actor	Responsibility
Governments and national authorities	Camp administration (supervision)
UN Agencies/ International Organizations designated as IASC 'cluster' leads	Camp coordination
Camp Managing Agency, normally national or international NGOs	Camp management

Camp coordination

41. Camp coordination takes place at two levels: at the inter-camp (or national) level and at the level of an individual camp. Camp coordination is used to describe all responsibilities linked to the lead development of national or regional plans, including exit strategies and solutions. It must ensure that international standards are applied and maintained (including training

all personnel on the Secretary General's Bulletin on SEA and Code of Conduct); and that service providers (Implementing Partners/Operational Partners) are identified, designated and mainstreamed on age, gender and diversity perspective. The monitoring and evaluation of service provision should be carried out in coordination with the women, girls, men and boys of the community. Advocacy and interface with national authorities at all levels, in order to create the humanitarian space necessary for an effective delivery of protection and assistance, is an integral part of the camp coordination function. It also includes the responsibility to set-up and maintain information management systems that allow all partners and service providers to access and share operational data at camp and inter-camp levels.

Camp administration

42. All responsibilities, such as overall camp supervision and security; maintaining law and order as well as the civilian and non-militarized character of the camp; and the issuance of documentation, permits and licenses (birth certificates, ID cards, travel permits, etc.) all fall under the prerogative of governments, national and local (civilian) authorities, and are called camp administration.

43. It is an obligation of the camp administration to secure the land and occupancy rights for a temporary settlement, as well as to compensate the legal owners. The administration must also prevent owners and proprietors from enforcing claims against individual camp residents and /or agencies working in the camp that would be tantamount to payments (rent, sale, compensation, etc.) or which would result in an eviction, dislocation or any other further displacement of those living in the camp before they can regain their original homes, in safety and dignity, or be provided with shelter that conforms to minimum standards.

Camp management

44. Camp management focuses on:

- i. establishing camp governance and community participation (with 50% female participation) / mobilization mechanisms;
- ii. maintenance of camp infra-structure;
- iii. data collection and sharing;
- iv. providing defined services;
- v. monitoring the service delivery with the participation of the community and of other providers in accordance with agreed standards, in order to avoid the duplication of activities and emergence of protection and assistance gaps; and
- vi. ensuring community complaints mechanisms are established and known to all.

Camp management agencies should apply a community-based approach and have a proven track record in practical application of gender equality policies and child protection as well as in the protection of the rights of women and girls.

45. Camp Coordination and Camp Management (CCCM) agencies do not have the responsibility to provide services within a camp environment that fall under

the responsibility of another cluster (nutrition, water and sanitation for example). It is the responsibility of CCCM agencies to identify such gaps and bring them to the attention of the respective cluster lead.

Annex 1

Elements of a coordinating body

Each of the factors listed below would need to be evaluated against the particular context and policy of the host government. At the beginning of the operation UNHCR should secure a suitable meeting room for coordination meetings.

Membership

The nature of the coordinating body and its usefulness will be determined partly by its membership.

1. Criteria for participation:
 - i. Provision of direct services
 - ii. Regular attendance at coordination meetings
 - iii. Compliance with service guidelines and standards
 - iv. Regular financial contributions to coordination mechanism
2. Other organizations may wish to attend coordination meetings without full participation in the coordination mechanism:
 - i. Organizations which may choose not to fully participate, e.g. ICRC
 - ii. Funding organizations and donor representatives
 - iii. Public interest groups
 - iv. Military forces

Functions of the coordination body

1. Meetings.

These may be needed at the central and the site level, and include:

- i. overall coordination meetings, which may be needed daily at the start of an emergency;
 - ii. sectoral committee meetings (e.g. health, registration, water); and
 - iii. conferences.
2. Identification of needed services and soliciting voluntary agencies to assume responsibilities for the provision of these services.
 3. Monitor respect for International Protection standards.
 4. Allocation of donated commodities and financial contributions.
 5. Guidelines and standards for the provision of services.
 6. Orientation of newly arrived agencies.
 7. Orientation of incoming staff.
 8. Research and documentation.
 9. Support for settlement coordination committees.
 10. Coordination with agencies outside the country.
 11. Information sharing.
 12. Fund raising.
 13. Gender balance in staffing.
 14. Ensure training of all humanitarian and government personnel on the Secretary General's Bulletin and Code of Conduct.

Annex 2 – Tips on running a meeting

1. Set clear objectives for the meeting

- Why is the meeting needed and what is the expected outcome? (Communication? Problem-solving? Planning? Decision-making?)
- Who should attend the meeting?
- Should the meeting be formal or informal?

2. Prepare an agenda

- Make a written agenda with clear objectives and approximate timing for each item.
- Ensure that the agenda states why the meeting is needed.
- Make sure the agenda is realistic (not too many items) and sequence the items appropriately.
- Put the difficult, important issues near the beginning (perhaps dealing first with something quick and simple).
- Plan breaks if the meeting is more than 1 hour in length.
- Avoid mixing information sharing and decision-making in the same meeting – hold separate meetings for these functions.

3. Documentation

- Circulate a detailed agenda, list of participants and any background documentation (such as minutes of previous meetings) in advance (but not too far ahead), 2 to 3 days before the meeting is best.
- Indicate the time, place and duration of the meeting.
- Prepare audio-visual materials in advance.

4. Seating arrangements

- Choose a circular or rectangular table.
- Avoid a long, narrow table if possible as this makes communication more difficult.
- In an informal setting, a semicircle of chairs facing a flip chart is the best.
- Everyone should be able to see each other.
- Participants should not be too crowded or too far apart.

5. During the meeting

- Start on time.
- Have the participants introduce themselves if they do not know each other.
- Clarify the objective(s) of the meeting and review the agenda and time limits.
- Outline how the meeting will be conducted (methodology).
- Identify the rapporteur or secretary for the meeting.
- Ask the participants if they agree to the agenda and be flexible on minor changes if there is consensus.
- If applicable, review action items of previous meeting(s).
- Make sure you have everyone's attention before opening the meeting.

6. During the meeting the chairman or facilitator should:

- Avoid getting personally involved in the discussions.
- Keep an overall view of the objective(s).
- Do not lose the thread of the argument.
- Stick to the agenda (but be flexible within agenda items).
- Ask for information and opinions.
- Summarize and reformulate key points (have the rapporteur or secretary use the flip chart to record the points as they occur).
- Clarify and elaborate where needed.
- Concentrate on key issues and stop digressions.
- Test for consensus.
- Ensure everyone gets a chance to speak.
- Assign responsibilities and deadlines for agreed tasks (action, responsibility, and date by agenda item).
- Set date, time and place for next meeting.
- Close the meeting on time, on a decided and positive note.

7. After the meeting

- Keep a record of the meeting. It should include the following basic items:
 - i. a list of the participants noting those who were invited but did not attend, "apologies" list;
 - ii. the conclusions, decisions, recommendations and the follow up action required, by agenda item, with the name of the person responsible for action and time frame; and
 - iii. the time, date and place of the next meeting.

Note: working in small groups

Dividing the participants into small groups can be useful in large meetings (more than 12 participants), when discussions are lengthy.

Depending on the subject, it can allow in-depth discussion on specific questions and possibly help to solve problems.

Introduction

1. Appropriate arrangements to implement an emergency operation will be fundamental to its success. UNHCR has a unique statutory responsibility for the provision of international protection. However, there is no such unique statutory responsibility for the provision and distribution of material assistance to refugees, which might be carried out by other organizations – governmental, UN agencies, NGOs, as well as directly by UNHCR. There are a number of factors which will influence the implementing arrangements for assistance operations. This chapter outlines implementing arrangements and procedures in emergencies including monitoring, reporting and evaluation. UNHCR guidelines for standard procedures must be referred to for more detail.

Implementing arrangements

2. Depending on the scale and needs of the emergency, a number of different implementing arrangements may be needed in the various sectors. One organization might have operational responsibility for health care, and another for logistics. Even within a sector, operational responsibility may have to be split up. Different operational partners might have responsibility for health care in different refugee sites or communities. In UNHCR terminology, an operating partner is an organization or agency that works in partnership with UNHCR to protect and assist refugees, and an implementing partner is an operational partner that signs an implementing agreement with UNHCR and is partially or fully funded by UNHCR.

Whenever possible, UNHCR seeks to implement assistance indirectly through an implementing partner rather than directly.

3. The origin of this policy is found in the Statute of UNHCR. Article 1 requires the High Commissioner to seek “permanent solutions for the problem of refugees by assisting Governments and, subject to the approval of the Governments concerned, private organizations...”. In accordance with Article 10, the High Commissioner “shall administer any funds, public or private, which he/she receives for assistance to refugees, and shall distribute them among the private and, as appropriate, public agencies which he/she deems best qualified to administer such assistance”.

Degree of operational responsibility of UNHCR

4. Although UNHCR normally seeks to implement indirectly through an implementing partner, there are circumstances in which it may be necessary, especially in the interests of refugees, for UNHCR to assume greater operational responsibility. UNHCR’s degree of direct operational responsibility will vary for each emergency situation, and also with time as the operation evolves.

5. Factors influencing the degree of operational responsibility undertaken by UNHCR, other organizations and the government include the following:

- i. The government’s capacity to manage the refugee emergency, because of the scale, nature, location of the emergency, and ability of existing government structures to respond.
- ii. The existence and capacity of other organizations in the country, and in the sectors where assistance is most needed.
- iii. The stage of the emergency. At the start of an emergency, the government itself frequently has full operational responsibility. For example, a new influx is often first assisted by the local district and provincial au-

thorities. On the other hand, in other circumstances, it is often at the start of an emergency where UNHCR has the greatest operational responsibility because there may be no suitable operational/implementing partner immediately available within the country.

6. Where UNHCR does assume a high degree of operational responsibility, swift action is needed to ensure that the necessary personnel and expertise are available, by obtaining the rapid deployment of sufficient UNHCR staff (see chapter 23 on administration and emergency staffing). At the same time, other organizations should be identified and mobilized to assume responsibilities in the various sectors as soon as possible.

The operational role of the government

7. Whatever the implementing arrangements, overall responsibility remains with the host government, assisted by UNHCR. The government's concurrence must, in accordance with Article 1 of the Statute, be sought on the proposed implementing arrangements.

8. The government may not have the capacity to be the primary operational organization, but may play a major role in the implementation of various activities of UNHCR and donors. In this case, it is preferable to ensure that the policy arm of the government (e.g. the Ministry of the Interior) is separate from the "operational" entities, since, as recipients of UNHCR funds, the relationship with the latter is substantially different.

It is preferable that the implementation of programmes be carried out by existing line ministries, e.g. the Ministry of Health for health programmes, Ministry of Education, Ministry for Gender etc. As a rule, new government departments should not be specifically created to respond to the refugee emergency.

Every effort should be made to resist the creation of such specialized departments.

The operational role of UN agencies

9. UNHCR always retains responsibility for the protection needs of refugees, but the refugees' material needs are likely to fall within sectors for which other organizations in the UN system have special competence through their mandate, experience and capacity, e.g. WFP and UNICEF (see chapter 16 on WFP roles and responsibilities on food assistance). The roles and responsibilities of UN agencies are defined through their mandates and MOUs, and situation-specific responsibilities are set out in exchanges of letters and agreements – this should avoid duplication, minimize gaps, and clarify roles on the basis of recognition of comparative advantages.

Non-governmental organizations

10. Where the government is not the implementing partner in a particular sector, there may be advantages to selecting a national organization or an NGO with the required capacity as a partner. National or locally-based organizations may already be delivering emergency assistance, would already have staff on the ground, and would already be familiar with the country.

11. Many international NGOs have great experience of refugee emergencies and some can deploy teams and resources at short notice, both for specific sectors and for general management. In addition to their own staff, they will also know of a wide circle of individuals with the appropriate skills and experience. International NGOs already working in the country may be strengthened by their headquarters. For instance, under the overall responsibility of the national Red Cross or Red Crescent Society, IFRC/ICRC may be able to strengthen quickly the capacity of the national society to implement the emergency operation.

12. Criteria for the selection of implementing partners may be found in chapter 4 of the UNHCR Manual. Nonetheless, it is important to select partners with a sound track record in community-based approach in child protection and promoting women's rights and gender equality.

Implementing procedures

Implementing procedures are subject to change. The forms, terms, documentation, procedures and references (e.g. chapter 4 of the UNHCR Manual) referred to in this section from paragraphs 13 to 31 may change from time to time. However, the basic principles should remain the same.

13. Authority to implement activities envisaged in an operations plan must be given formally through an implementing instrument which defines the conditions which govern project implementation and authorizes the expenditure of funds. Such authorization is usually given through a Letter of Instruction (LOI) which authorizes the UNHCR Representative to implement projects directly or to enter into implementing agreements with implementing partners.

Any party disbursing UNHCR funds must have a formal signed agreement with UNHCR.

14. However, in order to allow for implementation to commence prior to the establishment of a formal LOI, particularly if it is not possible to reallocate funds under an existing LOI, Headquarters can give the Representative in a country where an emergency is rapidly evolving the immediate authority to incur expenditures, and to enter into agreements for project implementation with implementing partners. Such authority will take the form of a transfer of appropriations and the issuance of the related spending authority. The latter is not intended to cover the entire emergency operation, but to permit a rapid response to immediate

needs, pending the formulation of an assistance project based on a detailed needs and resources assessment. Thus, in order to ensure continued assistance once these funds are exhausted or the initial project is terminated, the manager of the operation should, as soon as possible, send to Headquarters a detailed project proposal for the issuance of an LOI, in accordance with the procedures set out in Chapter 4 of the UNHCR Manual.

15. The minimum information which the Field Office must send to Headquarters in order for the initial spending authority to be issued is a budget proposal in US dollars at the sector level. No project description or work plan is required.

16. Actual expenditures must be charged to the appropriate project under which implementation is taking place and must be recorded at a more detailed level (i.e. cost center, programme, sector activity, situation and account code (former FMIS sub-item), as well as other MSRP chartfields such as "Theme" or "Donor Restriction", as required. Procedures concerning disbursements and payment vouchers must adhere to the existing Financial Rules.

Implementing agreements

17. Implementation of all or part of a project may be sub-contracted to one or more implementing partners. A party disbursing UNHCR funds must have a formal signed agreement with UNHCR. The agreement must be based on the internal delegation of authority, and must comply with the terms of the authority (i.e. initial spending authority or an LOI) and the Financial Rules. The standard clauses which must figure in any implementing agreement are described in Chapter 4 of the UNHCR Manual.

18. If the government or an international organization advances relief supplies from their own resources, UNHCR may agree in writing to reimburse them in cash or kind, provided the maximum US dollar

commitment is specified and does not exceed uncommitted funds available under the existing authority. Any such commitments should immediately be reported to Headquarters.

19. An agreement with the government covering the provision of assistance is quite separate from the administrative agreement that governs the status of the High Commissioner's representation in the country. Where this administrative agreement (often referred to as the "UNHCR Country Agreement") needs to be concluded, special instructions will be given by Headquarters. See also annexes to the Checklist for the Emergency Administrator for examples of such agreements.

Letter of Intent

20. If the implementing partner must start providing assistance before there is time to conclude an agreement, a signed "Mutual Letter of Intent to Conclude an Agreement" can authorize the first installment of funds. This is a temporary arrangement until there has been time to develop the detail of the project agreement. The letter must include certain basic clauses. Annex 1 contains a sample format for such a letter and the basic clauses.

Agreements

21. The form of the agreement will depend on the circumstances and on the identity of the implementing partner. The agreements exist in two different formats.

Bipartite agreements are for projects implemented by a governmental or a non-governmental organization. **Tripartite agreements** are for projects implemented by a non-governmental organization and where the host government is a third signatory to the agreement. The individual signing on behalf of UNHCR should be the addressee of the LOI. The agreement sets out the responsibilities of each party, for example the government's contributions to the programme (land, services etc.) and its undertakings on facilitating

the import and transport of relief supplies (traffic and landing rights, tax and customs exemptions, etc.).

Administrative expenditure by implementing partners

22. UNHCR looks to implementing partners to contribute their own resources to the refugee programme, and to develop the capacity to meet their own support costs, in particular their headquarters support costs. However, for international NGOs, headquarters support costs can be covered up to a maximum of 5 %, but only at the request of the partner. UNHCR recognizes, however, that certain types of support costs could be a legitimate charge on UNHCR voluntary funds. Support costs (as opposed to operational costs) are defined in chapter 4 of the UNHCR Manual, as are the guidelines applicable to the coverage of such costs.

Direct UNHCR expenditure

23. In many cases, there may be a need for direct UNHCR project expenditure in addition to programme delivery, and administrative support. This might include international procurement by UNHCR, clearing, storage and internal transport expenses for contributions in-kind, and initial direct operational expenditure by UNHCR Field Officers at the refugee site.

Procurement

24. The Representative may enter into a contract for the procurement of goods and services up to a certain limit (US\$20,000 in 2006), based on the results of a competitive bidding procedure.

25. Where the Representative needs to enter into a contract (or series of related contracts¹) in excess of US\$20,000 and

¹ *Related purchases are a series of contracts with one single vendor within the previous period of 12 months excluding contracts that have been approved by the Headquarters Committee on Contracts (CoC). CoC approval is required for related purchases of US\$200,000 or more; LCC approval is required from US\$20,000 up to US\$200,000.*

below US\$150,000, approval must be obtained either from the Local Contracts Committee, if such has been established, or from the Regional Committee on Contracts (see below) or if there is no Local or Regional Committee from the Headquarters Committee on Contracts (CoC). A Local Contracts Committee (LCC) can be established when circumstances demand, for example at the beginning of an emergency where required goods and services are available locally. It can only be established with the approval of Headquarters (according to the procedures in Annex 2).

26. For contracts in excess of US\$150,000, approval is required from the Headquarters Committee on Contracts. In some cases, Regional Contracts Committees (RCCs) exist or may be established with authority above US\$150,000. Representatives may resort to an RCC if there is one for their region and the contract is within its threshold.

27. In all cases, the Representative must ensure that there is always due assessment of the available alternatives, including competitive bidding, before procuring any goods or services.

28. Procurement procedures are described in chapter 8 of the UNHCR Manual, and are set out in Annex 2.

Contributions in-kind

29. Contributions in-kind may be made towards needs foreseen under the emergency programme. Whether these are made bilaterally or through UNHCR, their value (generally assessed on the same basis as foreseen in the budget costing) will normally be credited against the appropriate budget item, and the cash requirements through UNHCR for that item reduced accordingly. This mechanism may need to be carefully explained to the government and implementing partners. For all contributions in-kind made through UNHCR, a separate project or an “in-kind LOI” will be established by Headquarters for the

value of the contribution. The addressee of the relevant LOI is required to provide reports from the field to Headquarters on the arrival and distribution of the contribution. Paragraph 53 of chapter 9 on external relations discusses contributions in-kind received by the Field.

Careful negotiation is necessary when accepting in-kind contributions. Most of the time these donations do not cover costs for transportation, storage and distribution which could be very high at the time of emergency. If these costs are not covered then funds must be allocated through the existing LOI and directly implemented.

Monitoring, reporting and evaluation

30. Monitoring is the ongoing review of an operation or project during its implementation to ensure that inputs, activities, and outputs are proceeding according to plans (including budget and work schedules). Monitoring tracks progress towards objectives, and that progress should be analysed and evaluated by management, who can make improvements and take corrective measures to better achieve those objectives. Monitoring can be summed up in the question: “Are we doing the thing right?”

31. Careful and close monitoring of the activities and outputs is essential. An agreed work plan, which is mandatory in a sub-project agreement with partner, allows project managers to identify target dates for the completion of essential deliverables and as such is a monitoring tool (see Annex 3). Whatever the implementing arrangements, a UNHCR presence at, or at least frequent visits by the same person to, the site of the refugees will be required.

32. Control of UNHCR funds by the UNHCR field office and operational partners, and monitoring and evaluation, should be in accordance with established UNHCR procedures and the relevant clauses of the LOI. Proper project control, includ-

ing the close monitoring of obligation and expenditure levels, is particularly important in an emergency because of the risk of over-expenditure and the need to reallocate under-used resources without delay.

33. Projects should also be evaluated with the community so that the goals of the project, and their relevance and achievability, can be analysed by the community itself. This can be summed up in the question “Are we doing and have we done the right thing?”.

Sufficient information must be available to decision-makers so that the operation can be adjusted to meet changing needs or to correct shortcomings.

34. Participatory monitoring and evaluation should not be considered as time-consuming detractions from protecting and assisting refugees, but as important tools in an emergency to ensure that activities being carried out retain their relevance in rapidly changing situations, and continue to address the most urgent problems. The different circumstances of women, children, and adolescent boys and girls; and groups with specific needs such as older persons and minority groups should be identified and monitored closely. Their circumstances could and should be used as benchmarks for monitoring the effectiveness of the overall operation.

35. Reports should be in standard formats or cover standard issues, in order to ensure important information is covered but avoiding unnecessary detail. Always bear in mind the purpose of the report, and who will be reading it, keeping it concise and to the point. Energy should not be wasted on exchanging information that is not acted upon – a report that is not read and acted upon is a waste of paper and time.

36. See Annex 4 for a suggested format for a standard emergency situation report.

Situation reports should be sent as a matter of routine.

In addition to regular sitrep reporting on all aspects of the operation, specific reports will be required for various sectors like protection/SGBV, health etc.

37. Regular reports should be made by the implementing partner to UNHCR at field level. The reporting obligations of implementing partners must be set out in the relevant agreements signed with them. The Field must also send regular reports to Headquarters - implementing partners’ reports that are forwarded to Headquarters must always be accompanied by an analysis and comments from the Representative.

Special considerations

38. In an emergency, staff may be faced with a number of questions on which the following guidance may be helpful.

Payment for the purchase or rent of land occupied by persons concerning UNHCR

39. As a matter of policy, UNHCR does not buy or rent land, which the government of the country of asylum is expected to provide. Headquarters approval is required for exceptions to this policy. Construction on the land may, however, be financed by UNHCR.

Payment to refugees

40. The issue of paying refugees in cash or kind for certain assistance activities (e.g. health work, teaching, establishing basic infrastructure and shelters) will inevitably arise. How this issue is resolved can have a crucial effect on a settlement’s character.

Payment can destroy the sense of responsibility refugees feel for their welfare.

However, the absence of payment may mean that tasks essential to the settlement’s well-being are either not done or have to be done by paid outside labour.

41. **In the first days** of a settlement's existence payment to refugees would not normally be appropriate. In this start-up phase refugees should assume their responsibility towards themselves and their fellows to participate in the establishment of their settlement. Even payment-in-kind is probably inappropriate at this stage. In addition to the unfortunate impression of creating a right to payment, it may also involve commitments which cannot continue to be met, or have to be met at the expense of other assistance intended for the entire settlement. Problems with the supply system are almost inevitable at the beginning of a settlement's life and no group should in such circumstances get extra commodities to the direct detriment of others.

42. **In the longer-term**, certain types of community work frequently start to emerge as areas where standards will drop if some form of payment is not given. This is often the case with key public health services whose importance is not always correctly understood by the refugees. Before starting any payment scheme, calculate its full potential cost and ensure that the required extra funds or food are available. The continuing financial implications for a large refugee population may be considerable.

It should be borne in mind that, after payment is introduced for one type of job or for one group of workers, others will see this as a precedent and common criteria must be agreed upon by agencies.

It will be necessary to have some very clear but restrictive criteria for paid community work. The wage system introduced should not inhibit progress towards a self-reliant settlement. Those agencies responsible for different sectoral services should meet the wage costs of refugees working in that sector.

43. As the refugees are already supported, remuneration levels should be well below national rates. It is important that

this remuneration be fairly applied to all refugees doing broadly the same work. A major cause of discord at many refugee sites has been the payment by different organizations of markedly different rates to refugees for the same work, particularly in the area of education.

A standard payment rate is essential.

If there are different levels of skill this should be recognized and discussed in consultation with the refugees.

Provision of services to the local population

44. The local population should not see the refugees as a burden, because of their effect on existing local services and environment, nor should the refugees be a cause of resentment, because of benefits which may seem to accrue only to them. So activities to benefit the refugees, such as maintaining or improving the local infrastructure (roads, hospitals and schools) or to look after the local environment, could help avoid or diminish resentment on the part of the local population.

45. Bilateral aid programmes and other organizations, both within and outside the UN system, should be encouraged to help affected nationals. Assistance available to refugees should take account of the conditions of nationals in the area and a flexible approach should be adopted – the principle is that provision of services to refugees should not be higher than that available to the local population.

Corruption

46. UNHCR should ensure that all concerned with the provision of assistance know clearly what UNHCR policy is regarding corruption. UNHCR is obliged by donors and by its mandate to ensure that all funds distributed by it are properly used for the benefit of refugees and all transactions must be in accordance with the Financial Rules. UNHCR should clearly specify which practices are acceptable and

proper and which are not. It should also be clear that breaches of the policy will not be tolerated, and this message will be reinforced if rigorous monitoring and control are apparent to all parties.

Political and religious activity

47. Everyone has a right to political and religious expression: however, refugees are also obliged to conform to the laws and regulations of the host country as well as to the measures taken for the maintenance of public order. UNHCR itself is obliged to be non-political.² Responsibility for security and public order at the refugee site always rests with the government. To help maintain order, site planning should take into account any need there may be to physically separate any previously hostile groups among the refugees.

48. Other organizations active in the delivery of assistance may have a religious aspect in their normal work. Some are

traditional partners of UNHCR, and the separation of religious and other activities is long established and well understood, but for others it may be useful to recall the basic principles. Religious activities by those outside the refugee community, where permitted by the authorities, must be clearly dissociated from the delivery of assistance and services to refugees.

No proselytizing should take place in association with the provision of services such as education, health and community services.

Annex 1: Sample Letter of Mutual Intent to Conclude an Agreement

STANDARD FORMAT FOR A LETTER OF MUTUAL INTENT TO CONCLUDE AN AGREEMENT

Notre/Our code:

Date:

Dear

I should like to refer to our exchanges (*add details and dates as appropriate, e.g., letters, meetings, draft plans/budgets, etc.*) concerning the implementation by (*implementing partner*), hereinafter referred to as . . . , on behalf of the Office of the United Nations High Commissioner for Refugees, hereinafter referred to as UNHCR, of a programme of emergency assistance to (*origin and number of beneficiaries*) in (*location*).

The programme of emergency assistance (reference [*sub-project symbol*]) will cover activities for an initial period of (*number*) months from (*date*) to (*date*).

It is my understanding that it is our mutual intention to conclude as soon as possible an UNHCR Standard Sub-Project Agreement (hereinafter referred to as “the Agreement”) governing our cooperation in the above-mentioned programme. The conclusion of such an Agreement is mandatory under the Financial Rules of UNHCR whenever funds are made available by UNHCR.

The Agreement will incorporate, *inter alia*, the attached key provisions (Annex A) and will require (*name of implementing partner*) to report in narrative and financial form on the use of all contributions received from UNHCR.

In order to permit UNHCR to exceptionally begin with the implementation of the above-mentioned programme and to transfer moneys, I should be grateful if you would confirm in writing below your consent that the use of the sum of (*currency and amount*) for the activities and budget outlined in Annex B, will be considered as subject to the terms of the Agreement to be concluded with between UNHCR and (*name of implementing partner*).

Thank you for your cooperation.

(name, signature and title of the addressee of the Emergency Letter of Instruction)

I confirm that I am duly authorized to represent and engage (*name of implementing partner*) and I agree on behalf of the latter that the use of the sum of (*currency and amount*) will be considered as subject to the terms of the Agreement to be concluded with UNHCR.

(name, signature and title of the addressee of the letter above, and date)

Annex A

Key provisions of the UNHCR Sub-Project Agreement (Bipartite [Agency])

Obligations of the Agency

6.03 Inspection and Audit

The implementing Agency shall facilitate inspection and audit of Sub-Projects under its implementation by a specialized audit firm contracted through UNHCR Representations in the country of operations. However, sub-projects directly implemented by UNHCR will be subject to audit and inspection by UNHCR Audit Service of the United Nations Office of the Internal Oversight Services, the UNHCR Inspector General's Office, or any other person duly authorized by UNHCR. Should they at any time wish to do so, the United Nations Board of Auditors may also carry out an audit of the Sub-Project.

6.06 Rate of Exchange

The Agency shall apply the most favorable official rate of exchange for all transactions relating to the implementation of the Sub-Project.

6.07 Taxation and Customs

In situations, where equipment bought by the Agency may be subject to customs duty or taxation, the Agency shall consult with UNHCR on whether and how these payments may be exempted under the applicable international legal instruments.

6.08 Importation Documentation

The Agency shall ensure that all customs and registration documents, licenses and operating permits which may be required for the importation of Sub-Project supplies and the operation of equipment will be applied for in ample time prior to the forecasted importation date in order to avoid delays at the port of entry. The Agency shall indicate to the competent authorities that the Sub-Project supplies are bought with UNHCR funds.

6.14 Compliance with Law

The Agency shall, at its own expense, comply with all laws and regulations of its country of residence or operation, if different, and assume all liabilities and obligations imposed by any law or regulation with respect to its performance under this Agreement.

General Conditions

8.01 Copyright, Patents and other Proprietary Rights

UNHCR shall be entitled to all intellectual property and other proprietary rights including but not limited to patents, copyrights, and trademarks, with regard to products or documents and other materials which bear a direct relation to or are produced or prepared or collected in consequence of or in the course of the execution of this Agreement. At UNHCR request, the Agency shall take all necessary steps, execute all pertinent documents and generally assist in securing such proprietary rights and transferring them to UNHCR in compliance with the requirements of the applicable law.

8.02 Confidentiality

8.02.1 The confidentiality of any information pertaining to any beneficiary or group of beneficiaries of the Sub-Project shall be respected. The contents of any files, including computerized databases, can only be released to persons duly authorized by UNHCR to receive such information, and then only when in the interests of the beneficiary or group of beneficiaries.

8.02.2 All maps, drawings, photographs, mosaics, plans, reports, recommendations, estimates, documents and all other data compiled by or received by the Agency under this Agreement shall be the property of UNHCR, shall be treated as confidential and shall be delivered only to UNHCR Personnel on completion of work under this Agreement.

8.02.3 The Agency may not communicate at any time to any other person, Government or authority external to UNHCR information known to it by reason of its association with UNHCR which has not been made public, except with the authorization of UNHCR; nor shall the Agency at any time use such information to private advantage. These obligations do not lapse upon termination of this Agreement.

8.03 Privileges and immunities

Nothing in this Agreement, and its Annexes and Appendices shall be deemed a waiver, expressed or implied, of any privileges or immunities enjoyed by UNHCR.

8.04 Force majeure and other changes in condition

8.04.1 If during the period covered by this Agreement, the Agency is prevented from carrying out its obligations referred to in the Agreement, this fact shall be reported to UNHCR whereupon the Parties shall decide what arrangements, if any, shall be made to further implement or terminate the Agreement.

8.04.2 Should the number of beneficiaries, for whom assistance was foreseen under the Sub-Project, significantly change from the number originally envisaged, or if for any reason, changed circumstances reduce or increase the need for assistance in the amounts as originally foreseen, UNHCR shall be immediately informed so that, after mutual consultation, UNHCR can adapt its participation in the Sub-Project to the new situation or discontinue it as the circumstances may warrant.

8.04.3 In the event of, and as soon as possible after the occurrence of, any cause constituting *force majeure*, the Agency shall give notice and full particulars in writing to UNHCR, of such occurrence or change if the Agency is thereby rendered unable, wholly or in part, to perform its obligations and meet its responsibilities under this Agreement. The Parties shall

consult on the appropriate action to be taken, which may include termination of the Agreement, with either Party giving to the other at least seven days written notice of such termination.

8.07 Early Termination

8.07.1 If the Agency refuses or fails to prosecute any work, or separable part thereof, or violates any term, condition or requirement of this Agreement, UNHCR may terminate this Agreement in writing with immediate effect. Such termination shall relieve UNHCR from any further obligations under this Agreement or liability for compensation. The Agency shall return all unspent funds provided under this Agreement and UNHCR property in its possession, if any.

8.07.2 UNHCR may terminate forthwith this Agreement at any time should the mandate or the funding of UNHCR be curtailed or terminated, in which case the Agency shall be reimbursed by UNHCR for all reasonable costs incurred by the Agency prior to receipt of the notice of termination; this does not extend to expenditure incurred in excess of the funds made available under this Agreement.

8.07.3 In the event of any termination by UNHCR under this Article, no payment shall be due from UNHCR to the Agency except for work and services satisfactorily performed in conformity with the express terms of this Agreement. UNHCR shall not be liable for any expenditure or obligations made in advance or in excess of remittances actually made, unless these were expressly authorized by UNHCR.

8.07.4 Should the Agency be adjudged bankrupt, or be liquidated or become insolvent, or should the Agency make an assignment for the benefit of its creditors, or should a Receiver be appointed on account of the insolvency of the Agency, UNHCR may, without prejudice to any other right or remedy it may have under the terms of these conditions, terminate this Agreement

forthwith. The Agency shall immediately inform UNHCR of the occurrence of any of the above events.

Key provisions of Appendix 1 to the Sub-Project Agreement

6. Separate Interest-Bearing Bank Account

The Government or Agency shall deposit all remittances received from UNHCR into a separate bank account unless the deposit into a general or pool account has been authorized in this Agreement. The use of a general or pool account may be authorized if the deposit and the use of UNHCR funds remain traceable. The account into which the UNHCR remittances are deposited should be interest bearing. In the case of a general or pool account, any interest earnings shall be apportioned according to the source of funds and a fair share shall be credited to the UNHCR Sub-Project.

8. Maintenance of Financial and Sub-Project Records

8.1 The Government or Agency shall maintain separate Sub-Project records and accounts containing current information and documentation which, *inter alia*, shall comprise:

- (a) copies of the Agreement(s) and all revisions thereto;
- (b) payment vouchers, clearly showing the Sub-Project symbol, the name of the payee, the amount, the purpose and date of disbursement, evidencing all payments made and with all pertinent supporting documentation attached;
- (c) vouchers evidencing the receipt of all remittances, cash or any other form of credit to the Sub-Project account;
- (d) periodic analyses of actual expenditure against the Sub-Project budget;
- (e) records of all financial commitments entered into during the duration of the Sub-Project;

- (f) reports by auditors on the accounts and activities of the Sub-Project;

10. Audit Certificates

10.1 Audit Certificate for Government Implementing Partners

The Government shall, when UNHCR Agreements have an aggregate budget value of US \$ 100,000 and above, submit to UNHCR, within three months of the final date for liquidation of commitments, an audit certificate. Governmental implementing partners should be audited by the government's highest audit institution (Auditor General or Court of Audit). For all UNHCR Agreements having a value of less than US\$ 100,000, UNHCR reserves the right to request an audit.

10.2 Audit Certificate for International NGO Implementing Partners

For all UNHCR Agreements with an aggregate budget value of US \$ 300,000 and above, UNHCR, in consultation with the Agency, will engage an audit firm to conduct an independent audit of the Sub-Project(s). The audit report and certificate shall be submitted to UNHCR within three months of the final date for liquidation of commitments. They shall state whether the final Financial Sub-Project Monitoring Report submitted by the Agency to UNHCR gives a true and fair view of the state of affairs of the Sub-Project over the period of operation. The report should include such comments as the auditor may deem appropriate in respect of Sub-Project operations generally. For all UNHCR Agreements having a value of less than US\$ 300,000, UNHCR reserves the right to request an audit.

10.3 Audit Certificate for National NGO Implementing Partners

For all UNHCR Agreements with an aggregate budget of US \$ 100,000 and above, UNHCR, in consultation with the Agency, will engage an audit firm to conduct an independent audit of the Sub-Project. The

audit report and certificate shall be submitted to UNHCR, within three months of the final date for liquidation of commitments. They shall state whether the final Financial Sub-Project Monitoring Report submitted by the Agency to UNHCR gives a true and fair view of the state of affairs of the Sub-Project over the period of operation. The report should include such comments as the auditor may deem appropriate in respect of Sub-Project operations

generally. For all UNHCR Agreements having a budget of less than US\$ 100,000, UNHCR reserves the right to engage an audit firm.

United Nations agencies (including IOM)

Audit certificates are not required from these agencies, as the financial statements are audited by the same or comparable authority that audits UNHCR accounts.

Annex 2: Procurement by a UNHCR Branch Offices (Field location).

1. Introduction

1.1. The procedures applicable to the procurement of goods and/or services by UNHCR Headquarters or UNHCR offices in the field (other than contractual arrangements for the employment of staff) vary according to the US dollar value (at the prevailing United Nations rate of exchange) of the goods or services, and are described below.

1.2 For all purchases of substantial quantities of relief or other supplies by UNHCR offices in the field, Representatives should nominate a purchasing/logistics focal point with a clear line of responsibility. Local purchases will be initiated by, or at least cleared with, the purchasing/logistics focal point. In all circumstances, including the evaluation of contracts for the supply of goods and services

or consultancies, the procedures described below will apply. The term “Purchase Order” is to be read as also applying to other forms of authorization used in relation to contracts for services or corporate or institutional consultancies.

1.3 In all cases of procurement of goods and/or services, the procedures and controls applied should be in accordance with Chapter 8 of the UNHCR Manual and must provide an open, competitive, qualitative and accountable process to obtain such goods or services which meet project requirements at the lowest available cost. It is the responsibility of the addressee of the Letter of Instruction to ensure that the relevant procedures are adhered to.

1.4 All contracts entered into for the procurement of goods and/or services should ensure exemption from, or reimbursement of, all customs duties, levies and direct taxes on services and goods, supplies or any other articles imported or domestically purchased.

** Please provide a succinct description of the activities to be carried out under this Letter of Intent. If available, you also may also attach a Budget Printout.*

1.5 It is the responsibility of the Representative to ensure that each UNHCR office in the field maintains a register of all commercial contracts entered into and that a sequential number is assigned to every such contract.

1.7 For a value of less than US\$ 1000:

A Purchase Order may be issued without recourse to formal tender, provided that funds are available under the Letter of Instruction and that at least three informal offers or prices have been considered and the best offer has been selected.

1.8 For a value of over US\$ 1,000 and up to US\$ 5,000:

A Purchase Order should be issued provided that funds are available under the Letter of Instruction and that at least three formal quotations have been compared and the best offer has been selected. A written record of the quotations and the reasons for the selection must be kept.

1.9 For a value of over US\$ 5,000:

A Purchase Order should be issued provided that funds are available under the Letter of Instruction and that selection has been made on the basis of competitive bidding, obtained in response to a formal Quotation Request sent to selected suppliers inviting them to submit sealed quotations within a specified time frame. Section 6 of UNHCR Supply Manual – (Chapter 8) provide guidelines and an example for a Quotation, Tender and Request for proposal (RFP). The Quotation, Tender or Proposal Request must stipulate that all offers must be received at the UNHCR office in signed and sealed envelopes and marked with the Quotation Request number. All sealed offers received must remain sealed and must be kept under lock and key until the expiration of the bid deadline. All bids must be opened before a witness by the Administrative

Officer or the Officer in charge of administration in the office, and must be initiated by both the person opening the bids and

the witness. The witness shall be selected by the Representative and drawn from the professional or national officer categories. All formal offers will be compared on a Tabulation of Bids form. The recommended supplier and the reasons for selecting that supplier will be stated thereon.

1.10 For a value of over US\$ 20,000 and up to US\$ 150,000 Representatives will establish a Local Contracts Committee to consider bids and to make the appropriate recommendations. Rules and procedures concerning Contract Committees and their composition are set out below. In a country with more than one Field/Sub Office, the Representative may wish to establish Contract Committees at different duty stations. Depending on local costs and current exchange rates, Representatives may also lower the financial limit of procurement to be considered by the Local Contract Committee. The Committee will consider quotations subject to the same conditions as set out in paragraph 1.9 above. If appropriate, the Representative and/or the Committee may wish to request specialist advice from the Programme and Technical Support Section or the Supply Management Section at Headquarters.

1.11 For a value of US\$ 150,000 or more: A submission must be made to the Committee on Contracts at Headquarters except in cases where Headquarters has authorized the establishment of a Regional Committee on Contracts as described in 3 below. For submissions to the Headquarters Committee on Contracts, a minimum number of quotations must be requested and considered by the Local Contract Committee which will make a proposal as to the most suitable supplier to the HQ Committee on Contracts through the relevant Desk at Headquarters. Please refer to Section 6, page 2.6.6 in Supply Manual on recommended number of quotations to be requested for a specific purchase value. In cases where Headquarters has authorized the establishment of a Regional Commit-

tee on Contracts, the latter may evaluate and decide on all bids without recourse to the Local Contracts Committee. Nevertheless, in all cases, the relevant specialists in the Programme and Technical Support Section and the Supply Management

Section must be consulted before or during the tendering and evaluation stages so as to ensure compliance with technical requirements and that prices are compatible with international market rates for the goods or services under consideration. Submissions to the Committee on Contracts should include information as shown in Section 6 Chart –“Evaluating Offers & Proposals”of the Supply Manual. After approval by the Committee on Contracts, a Purchase Order may be issued.

2. Local Committee on Contracts

2.1 Procurement of goods or services by a UNHCR office in the field for a value of over US\$ 20,000 and up to US\$ 150,000 must be approved by a Local Contracts Committee. This Committee will also prepare proposals to the Headquarters Committee on Contracts for procurement for a value of over US\$ 150,000 in cases where Headquarters has not authorized the establishment of a Regional Committee on Contracts. The Local Contracts Committee will be established and chaired by the Representative and will consolidate the requirements, oversee the tendering process, select suitable local suppliers and record its recommendations in writing.

2.2 The Committee will be composed of Members and alternate members designated by the Representative and drawn from the professional or national officer categories. Staff members responsible for procurement should be excluded from membership. A quorum will consist of three Members.

2.3 The staff member in charge of procurement should present a written proposal to the Local Contracts Committee which will include information on the

goods or services to be procured as per Section 6 Chart –“Evaluating Offers & Proposals”of the Supply Manual. The minutes of the meeting will be taken and issued (at least in draft) within two working days after the meeting. Alternatively, particularly in an emergency, Members of the Committee may approve purchase by signature of the proposal with appropriate comments. In general, the Committee should adopt procedures similar to those of the UNHCR Committee on Contracts as set out in Annex 8.5 of Chapter 4 of the UNHCR Manual, except for the provisions concerning emergency procedures.

3. Establishment of Local and Regional Committees on Contracts:

3.1 In a UNHCR office in the field, the Representative may establish a Local or Regional Committee on Contracts, particularly in the early stages of an emergency operation and when required goods or services are known to be available locally or regionally. The authority to establish a such Committee on Contracts rests with the Representative, as regards the Local Committee on Contracts but the establishment of a Regional Committee on Contracts must be approved by Headquarters. The Representative should contact the Secretary of the HQ Contracts Committee at Headquarters for further information in this regard. The Committee will be chaired by the Representative or by a formally designated alternate, and will be composed of at least three professional staff members. If there is no quorum, the matter will be referred to the Committee on Contracts at Headquarters. The Local Committee on Contracts will consider quotations subject to the same conditions as set out in paragraph 1.9 above.

3.2 The Representative should notify Headquarters of the establishment of a Local Contracts Committee. All notifications of establishment (or the extension of the period of validity) of a Local Committee on Contracts should be sent via the

Desk to the Chairperson of the Committee on Contracts and the Head, Supply Management Service.

3.3 The Representative shall appoint a secretary to the Local Committee on Contracts to receive submissions to the Committee, to schedule meetings and secure the relevant documentation, to conduct required correspondence, to maintain the Committee's files and to prepare and distribute minutes of the Committee's proceedings. Each member shall have an alternate.

3.4 Copies of the minutes and proceedings of each meeting of the Local Committee on Contracts, together with a Tabulation of Bids form and copies of the contracts entered into or purchase orders placed (and any amendments to these) must be forwarded to the Secretary of the Committee on Contracts at Headquarters.. The minutes must contain a summary of the discussion, the reasons for decisions taken, details regarding the contractor or supplier selected and the potential costs involved.

Annex 4: Example of a Standard Emergency Situation Report (SITREP)

1. In emergencies, it is essential that regular situation reports reach the outside world (other UN agencies, implementing partners). The frequency of such reports will be determined by the characteristics of the situation; more frequent reports will be necessary in the initial stage of an emergency. Situation reports should give an overall view of the situation with sufficient factual content and explanation of changes since the last report to answer rather than raise substantive questions. By indicating progress achieved, problems encountered and steps being taken or planned to overcome these problems, the reports should give a cumulative picture of how the needs of the refugees are being met. It should report on actions including actual and planned activities; however, it should not dwell on intentions.

The SITREP should:

- be short;
- focus on priority areas;
- include a section on protection with information on SGBV and participatory assessment results;
- give quantitative data in a standard format (e.g. give the death rate as deaths/10,000/day NOT the number of people who have died);
- highlight trends (e.g. increasing/decreasing water supply, increase/decrease in arrival rate);
- mainstream age, gender and diversity analysis throughout; and
- clearly say who is expected to take any actions which are specified.

2. A suggested format is given below. Information contained in the SITREP should be analyzed and consolidated before being passed on to the next management level. The practice of simply copying “raw” and un-analyzed information from one level to another should be avoided. If the same format is used by all levels from site to

central office to Headquarters, it will make it easier to consolidate reports from various areas. Major headings should as a rule be the same in each report, indicating “no change” if appropriate. The report can either be structured by sector of assistance with sites covered under each sector, or alternatively, by site, with sectors of assistance covered under each site heading. In either case, the information under each sector of assistance and for each location should cover as applicable:

- i. current situation;
- ii. particular problem areas, remedial action planned with time frame;
- iii. any variation from overall implementing arrangements; and/or
- iv. any action required from the addressee of the SITREP.

3. The reports should be sequentially numbered, copied to other UNHCR offices as appropriate (including the UNHCR liaison office in New York). The report may be used as the basis for wider situation reports issued from Headquarters.

SITREP (number)

COUNTRY

COVERING PERIOD (date) TO (date)

Drafted, cleared, authorized by () on (date).

A. GENERAL SITUATION

B. MAJOR DEVELOPMENTS

Summary of general assessment of situation, assessment of refugee location, and field deployment of UNHCR staff. Summary of major trends including protection.

C. REFUGEE STATISTICS AND REGISTRATION (by sex and age)

By location in country of origin or by distinct groups if not self-evident. Explanation of changes since last report. Indication of sources, e.g. government, UNHCR, etc. Any additional information (as relevant) on gender breakdown, vulnerable cases, variances between UNHCR and official figures, group or individual determi-

nation, etc. A format for reporting on population in emergency situation reports is given in Annex 1 of chapter 10 on population estimation and registration.

D. PROTECTION AND DURABLE SOLUTIONS

Summary of any developments.

E. OPERATIONS

E.1. Coordination

Government departments, UN system, NGOs – both at central and field levels.

E.2. Overall Implementing Arrangements

Role of authorities. Operational role of UNHCR. Role of UNHCR's government counterparts, other UN agencies, international organizations and NGO partners. Other sources of significant assistance.

E.3. Assistance

Summary of main developments since the last report, broken down by sector and/or site, as applicable. Additional information provided could include major problems encountered in programme delivery and modifications required to implementing arrangements.

Special attention should be given to specific issues as SBGV, unaccompanied and separated children, older persons, persons with disabilities etc,

F. EXTERNAL RELATIONS

Significant events in relations with donor government representatives, with diplomatic missions in general and with the media.

G. ADMINISTRATION AND STAFFING

Establishment of UNHCR presence, office premises, vehicles and equipment, staffing arrangements, local recruitment, etc.

Annexes		
Annex 1: Member States of the Executive Committee of the High Commissioner's Programme (EXCOM)		151
Annex 2: Example of a Note Verbale		152

1. All matters of protocol relating to establishing a new UNHCR presence in an emergency are likely to be handled by the Foreign Ministry in the same way as for other United Nations organizations. However, substantive matters concerning refugees may be handled by another authority, for example the President or Prime Minister's office or the Ministry of Interior. Guidance on the form of written communications with the government is given below.

2. It is important that the diplomatic corps accredited to the country is kept informed of UNHCR's activities from the start of an emergency. An informed and concerned diplomatic corps will be helpful in gaining support for the emergency operation both from the host country institutions and from donor governments for funding.

Briefing meetings

3. Briefing meetings should start in the early days of an emergency and continue on a regular basis. There may already be a contact group of the ambassadors most interested in refugee matters who could be briefed in the early days of an emergency. Where there is no such group, or to make the arrangements for meetings more formal, it may be appropriate to invite the ambassadors of member states of the Executive Committee of the High Commissioner's Programme (EXCOM) to the briefings (for a list of EXCOM members, see Annex 1).

The aim is to keep the Executive Committee and other immediately concerned Governments well informed while not devoting scarce time to a major protocol exercise.

4. A number of people may be helpful in giving advice on the organization and participants of the meetings, including: the

ambassador from the country of the current Executive Committee Chairman may be helpful in advising on the organization of briefings, or the Dean of the Diplomatic Corps, or the ambassador of the country currently holding the presidency of the European Union (as a major donor group), or the Organization of African Unity or other regional groups.

5. A representative of the government would normally be present at these briefings. United Nations organizations and NGOs directly involved in the emergency operation should also be invited to attend.

6. Unless chaired by the representative of the Government, the meeting should normally be chaired by UNHCR. Other agencies should be encouraged to give account of their activities. Initially these meetings may need to be held fortnightly or even weekly, but once a month is a reasonable interval once the situation starts to come under control.

7. It may be useful to prepare for briefing meetings by prior discussions with other participating agencies to ensure that there is agreement on the issues and on information such as population figures.

8. If a question cannot be answered immediately, arrangements to follow up on an individual basis with the questioner should be made.

9. These briefing meetings will be important for fund-raising purposes. Representatives of donor governments will form part of the diplomatic corps and will therefore be involved in the meetings. Additional smaller briefing meetings may be appropriate, to deal with particular concerns of a donor, or to respond to a donor mission, or in respect of major protection issues which might require smaller, more discreet, briefings.

10. A useful complementary measure, which might eventually substitute diplomatic and other briefings, is a weekly or monthly written report prepared by

UNHCR. The standard internal emergency situation report, or sitrep, could be used as the basis for this report (the format for this is suggested in Annex 3 of chapter 8 on implementing arrangements). If the sitrep is to be used in this way the parts which must not be made public should be clearly marked. Other United

Nations bodies directly involved should contribute an account of their work. Such situation reports should be widely distributed in the operations area and to focal points at Headquarters.

11. Implementation of these briefing arrangements will require valuable time and effort. Clearly the priority is to deliver the emergency assistance needed by refugees. However, if those interested do not have a regular source of information on the progress of the operation, UNHCR staff may end up spending even more time on individual briefings.

Relations with the Media

Introduction

12. The media has traditionally been an ally of UNHCR and other humanitarian agencies working in difficult conditions. The media, especially locally based correspondents, can also be a useful source of information. There may be considerable media interest in an emergency and perceptions of how the international community in general, and UNHCR in particular, is responding will be set in the early days. This has important implications for support for UNHCR. It takes time to correct an unfavourable first impression, and media interest may have shifted elsewhere before this happens.

The best way to have positive media coverage and support is to run the most effective emergency operation possible in the circumstances. Expertise in relations with the media can never substitute good performance.

13. Television, radio and newspapers operate on tight deadlines and need factual stories on the emergency, with some background information. Magazines and some radio and television programs cover stories in depth and have more time available for research and subsequent re-checking. Television news channels (such as CNN, BBC World and Sky News), and wire services (for example AFP, AP, Reuters), produce bulletin-type news stories, have very short deadlines, and are likely to be the major source for world-wide coverage of the emergency.

14. Given the logistical difficulties of some emergencies, journalists are likely to approach humanitarian agencies with requests for help in moving around. Whenever possible, and taking into account the operational priorities and the sensitivity of some situations, journalists, both national and international, should be assisted in getting to the story.

General Guidelines for Relations with the media

15. The first decision to make concerns who should handle relations with the media. The media prefer information directly from those responsible, which can be very time-consuming. It is therefore recommended that a Public Information Officer be a member of the UNHCR field team from the start.

16. The Public Information Officer must have full and immediate access to information concerning developments in the operation and UNHCR policies and reactions. He/she needs to be updated by the most senior UNHCR Officer in the operation as often as necessary, at least once per day in a major emergency. The Public Information Officer should then be responsible for all aspects of relations with the media. Where there is no UNHCR Public Information Officer, good contacts with the press officers of other organizations

will be helpful for general advice, and for organizing joint news conferences.

17. In emergencies the media will probably go to the location of the refugees, often unannounced, and expect a briefing from UNHCR field officers on the spot. The briefing given should be limited to facts and practical intentions. See below for tips for interviews.

18. When intense press interest in a particular event can be predicted, there is much to be said for preparing a short and simple statement, distributing it to the enquirers, and avoiding further comment. Close internal coordination with field staff is essential, particularly if the interest relates to an event occurring in a location where UNHCR has field staff. Sending the statement to Headquarters is essential as questions are likely to be raised in Geneva.

19. Newspaper editors will generally print a factual correction, and will often give space in opinion or correspondence columns for UNHCR to comment on errors of interpretation of UNHCR's role and policy. It is more difficult to correct a factual error made on television or radio. However, when trying to make corrections, these should be corrections of fact not of interpretation.

UNHCR should be careful to avoid public polemical debate.

Locally-based media

20. The national media will be very important in determining local attitudes to the refugees, and may also give an early indication of sensitive issues and even government policy. The government may be as concerned by national coverage as by foreign coverage. Local foreign-language newspapers may be less important, except indirectly as a result of their effect on the diplomatic community or foreign press corps.

21. Field offices should monitor the local media, including the radio and television, which may play a much greater role in influencing public opinion than newspapers. Good relations should be developed with local correspondents covering the emergency. However, exercise considerable discretion until there is practical experience of the outcome of interviews. Language barriers are often a source of misunderstanding, particularly on the telephone and a locally recruited Public Information Assistant can be very helpful in this respect.

22. It will probably be useful to make early contact with the news editors of the main national (and any local foreign language) radio, television stations and newspapers to explain UNHCR's role. Stress that every priority is being given to the needs of the emergency and give a contact reference, should further information be required.

Information sharing with the government

23. The government may be sensitive to coverage of the refugees, and early contact should be established with the official press office or information service. General statements or press releases should be shared with government information services and the department handling refugees and UNHCR. Statements relating to joint government-UNHCR actions may have to be cleared with the government first.

Field/Headquarters information sharing

24. A regular and swift exchange of information is essential. Many questions on the operation will be asked directly in Geneva and New York. There is a UN press briefing in Geneva every Tuesday and Friday morning, in which UNHCR participates, and a weekday press briefing at noon in New York by the spokesperson of the Secretary-General. In

addition, UNHCR calls special news conferences whenever necessary.

25. The Public Information Section at Headquarters must have access to up-to-date information. The Field should therefore:

- keep media interest in mind when reporting to Headquarters (for example in sitreps);
- provide information (in sitreps or separately) on matters likely to be of specific press interest;
- send reviews of local media coverage to Headquarters.

26. In addition, if the Field has given an interview with a major foreign newspaper or network, or if a foreign correspondent has been aggressive or appeared unsatisfied with answers, the Public Information Section at Headquarters should be forewarned.

27. Similarly, the Field must be kept regularly informed by the Public Information Section at Headquarters of international media coverage. Important international media reports (including those based on briefings given in the field) may not be available in the field.

Press who contact Headquarters before going to the field should be clearly briefed that only limited attention and logistical support can be devoted to them by the field offices during the emergency phase.

Tips for interviews

28. Reporters generally respect the ground rules for an interview, provided these are clearly established in advance. The interviewer and interviewee should agree on type of attribution and how the interviewee will be quoted. For example: by name, “a UNHCR spokesman”, “UN sources”, “humanitarian worker”, “sources in the international community”, etc. An interview may need to mix full attribution for the facts, and no attribution

for information on political considerations and constraints. Alternatively, an interview can be fully attributed and may often be tape recorded. An interview can also be for background information, and in this case what is said by the interviewee is not attributed directly.

29. Radio and television interviews can provide good coverage for UNHCR’s aims. They are, by definition, for full attribution. If this is not advisable because of particular sensitivities, avoid such interviews. Bear in mind that interviews on radio and television can be edited.

30. In all interviews and comments to the media, when in doubt err on the side of discretion. Considerable experience and self-discipline is needed to limit remarks to what was previously planned. Having agreed to give an interview or answer questions, showing hostility or irritation will nearly always be counter-productive, no matter how unreasonable or loaded the questions are.

31. UNHCR’s work is difficult and mistakes will inevitably be made, but do not try to hide problems and difficulties.

Though it is important to be discreet, honesty and clarity are the best policy.

Most journalists understand these problems and respect efforts in what they know are very difficult conditions. In fact, it is almost always best to talk about problems before the media find out about them on their own – and they usually do. Finally, if mistakes are made, admit them and try to learn from them.

32. When a complete answer to a question is given and a silence ensues, leave it silent. There is no law stating that one has to say more than one wants or intends to say. It is better to pause to construct a response than to ramble. Do not suggest follow-up questions, unless it is in order to disseminate important information.

33. Do not ask for a story to be killed or suppressed. Attempts at censorship will backfire and are likely to generate two immediate consequences; stepped up investigation of the matter to be suppressed and an unfavourable story on the attempts to suppress it.

34. When in a press conference, especially with the electronic media, state the most important point at the beginning. In subsequent answers and statements, refer again to the most important point. When dealing with radio and television, keep answers short. Television and radio put severe restrictions on how much information can be used and long, drawn-out explanations and answers tend not to be used and the main point not covered.

35. Give direct answers to direct questions. If the facts are not known, say so, and offer to get back to the reporter with the information.

36. Sensitive political or policy questions should be referred to the main UNHCR field office. Responses to general questions about the situation should be made with UNHCR's mandate and goals in mind.

37. Take the initiative/control. Avoid answering speculative «what if» questions.

Be prepared to take the lead and direct the interview into positive areas of information about the operation.

38. Key things to remember for all interviews are:

- **BE YOURSELF.** While journalists are always on the lookout for a good story, they are not out to make your life miserable. So relax and be friendly. Look at the interviewer. Avoid nervous gestures and mannerisms. Keep your answers short and simple.
- **BE POSITIVE.** Do not criticize colleagues or other UN organizations

and NGOs. We are all in the same boat.

- **BE CONVERSATIONAL.** When you talk to journalists, keep it simple and clear. Do not use the type of language found in many UNHCR internal documents. In everyday conversation, ordinary people don't use terms like «modalities», «durable solutions», «inter alia», «specific international protection mandat,», «NGO» and «implementing partner». Use examples that will make the information comprehensible to your audience.
- **BE CONCISE.** A 10-minute interview may end up being seconds on the air, or three lines in the newspaper. It is essential to crystallize your thoughts in a few quotable sentences.
- **BE IDENTIFIABLE WITH UNHCR.** If you are being interviewed for television, or if a photograph will accompany the report, try to get a UNHCR logo in the background – possibly a flag or on a vehicle, wear a UNHCR T-shirt or cap.

Guidelines for appearance on television

39. Key things to remember for television interviews are:

DO's

- Do make and maintain eye contact with the questioner, not the camera. Do not let your eyes wander.
- DO wear suitable subdued-coloured clothes. Normal working clothes for field conditions are fine – ties and suits are not appropriate.
- DO check your appearance before going in front of the camera, hair, buttons, zips?
- DO make short statements, each holding up on its own.
- DO remember to make your most important points as early as possible.
- DO, before you begin, discuss with the interviewer what line the discussion will take.

- DO remember that the interviewer and audience know less about your subject than you do.
- DO remember that any programme is likely to be edited before use.

DONT's

- DON'T smoke.
- DON'T wear sunglasses or jewellery.
- DON'T forget that the smallest mannerisms show up more obviously on television.
- DON'T fidget or fiddle with pens, pencils, lighters, etc.
- DON'T say "I think" too often. it sounds as though you are uncertain of your subject. Talk about "we" or "UNHCR" instead.

Visibility of the operation

40. In addition to working with the media to ensure coverage of UNHCR operations, emergency managers must pay attention to the visibility of the operation.

41. Proper identification of staff, vehicles, buildings and relief materials contributes to improved dialogue with beneficiaries, local authorities and partners.

In conflict zones, visible markings can be an important security measure for staff and property.

42. Staff should be visible and identifiable as UNHCR personnel. Visibility items for staff, vehicles and buildings are available from Headquarters (see Catalogue of Emergency Response Resources, Appendix 1). A visible UNHCR will help to show the beneficiaries and the outside world that UNHCR is present, active and delivering services to the refugees.

Funding and donor relations

Operational reserve

43. The availability of funds is a prerequisite for any UNHCR emergency action. The initial funding in an emergency for project, operations delivery and admin-

istrative support expenditure is likely to be allocated from UNHCR's Operational Reserve. Under the terms of UNHCR's Financial Rules (A/AC.96/503/Rev.7 issued 07 October 1999, Article 6 para 6.5), the Operational Reserve is established to provide "financial assistance to refugees and displaced persons in emergency situations for which there is no provision in the programmes approved by the Executive Committee" and to meet additional administrative expenditures resulting from those emergencies. Further details are provided in Chapter 4 of the UNHCR Manual and in Appendix 1, Catalogue of Emergency Response Resources.

Central Emergency Response Fund

44. **The upgraded Central Emergency Response Fund (CERF)** has been established by the General Assembly to provide a more equitable and timely response to identified core emergency humanitarian needs, in case of a sudden onset of new emergencies or for chronically under-funded crises. Under the revised scheme, the new CERF grant component will contain funds of up to US Dollars 450 million, depending on the voluntary contributions received. UN agencies and IOM are eligible to apply. All CERF grant components must address core life-saving humanitarian needs. The application is primarily field-driven led by the Humanitarian/Resident Coordinator of a given country who, together with IASC country team, will jointly discuss the priority projects.

Disbursements for rapid response: Under this category, funds shall be disbursed to provide an initial injection of funds for a particular emergency. In principle, a maximum of USD 30 million will be applied to any disaster or emergency for a project duration of maximum three months.

Disbursements for chronically under-funded crises: Grants for under-funded emergencies have been established with a view to providing and promoting an

equitable response to core humanitarian emergencies. The implementation period is usually based on a calendar year. To determine the appropriate use of grants, the Emergency Relief Coordinator (ERC) will consult with the IASC to decide the countries for allocation. Such an exercise will take place twice a year. Firstly soon after the launch and the ‘Kick-Off’ of the Consolidated Appeals Process (CAP) in early January, and secondly, after the CAP mid-year review in July. The allocations are not exclusive to CAP countries, and non-CAP countries can also be considered.

Procedures for application: In both categories above, Field shall discuss with the IASC country team the priority projects based on demonstrable/assessed needs and prepare the proposal based on the “CERF grant application form”. It is highly encouraged that the Field Offices share draft application forms with Headquarters prior to their finalization, in order to keep a minimum quality and consistency of applications. Thereafter, all applications will be sent to ERC, by the Humanitarian/Resident Coordinator, with an endorsement/cover. No application will be considered eligible without such endorsement letters. After review, ERC will send an approval letter to the High Commissioner, based on which a Letter of Understanding will be prepared by Donor Relations and Resource Mobilisation (DRRM) and signed on his behalf. Throughout the process, Field is advised to keep DRRM and the Liaison Office New York informed of any follow up required.

For both grants, financial and narrative reports on the use of grants are mandatory.

The loan component of CERF will remain unchanged with a target level of USD 50 million and is used for cash advances to operational organizations and entities within the UN system. Generally, UNHCR would access funds from CERF in installments of USD 5.0 million, which can be very useful in cases of cash

shortages. These advances are to be reimbursed as a first charge against income subsequently received, usually as a result of a CAP. Only under very exceptional circumstances do the rules allow for the non-reimbursement of allocations made from this fund.

For the CERF loan component, the Director of Bureau should initiate a request for CERF funds by addressing a memorandum to the High Commissioner for approval to request an allocation from the CERF. The memorandum is routed through the Head of DRRM, the Controller and Director of DFSM and the Deputy High Commissioner.

No request to the CERF shall be undertaken without clearance from the Controller and the Chief of DRRM.

Once the High Commissioner has agreed to the request, a letter requesting an allocation from the Fund is sent from the High Commissioner to the Under-Secretary General and Coordinator for Humanitarian Affairs. This letter should:

- define the purpose and objectives of the programme;
- specify the amount of money requested; and
- indicate the initiatives that are being undertaken to raise funds for this programme to allow for the Fund’s reimbursement.

If agreed, OCHA will reply confirming that an allocation can be made available, the conditions that will apply and the reporting requirements. These two letters will constitute a formal exchange between the Organizations. In exceptional circumstances involving particularly urgent emergencies, OCHA may authorize advances prior to the formal exchange of letters. This must, however, be followed with a formal exchange of letters within 30 days.

Using existing funds

45. If an emergency develops in an existing operation, immediate funds may be available from those already foreseen for that operation or, if appropriate, from the Operational Reserve. Depending on the scale of further needs, and also on the time of year when the emergency occurs, a proposal for further funding could be made to the Executive Committee as a new current year project or as a new project for the coming year, or could be the subject of a special appeal.

Communicating needs to donors

46. Operational needs, progress and constraints must be clearly communicated to donors. A donor relations strategy should be established in the first days of an emergency and maintained for its duration.

47. Donor relations should be maintained through:

- i. Briefing meetings and regular contact at field level between UNHCR staff and donor representatives. Regular briefing meetings (see paragraphs 3 to 11 above) with donors should aim to keep them up to date on actions being taken, protection issues, and any constraints.
- ii. Regular contact and follow-up at Headquarters level.
- iii. Regular updates on field operations.
- iv. Involving donor representatives in missions to see refugee sites and other points at which assistance is delivered.
- v. Indirect communication of operational needs through enhancing UNHCR's visibility in the media.

48. It is important to highlight UNHCR's protection and coordinating role when communicating with donors. Coordination must be a reality on the ground with UNHCR taking, and being seen to take, an appropriate leadership role.

49. Funding appeal or donor contacts are usually preceded by the official approval and establishment of the (new) emergency programme by ORB. There are no exceptions to this. This is necessary to ensure funding is targeted where it is most needed, to provide consistency in operational priorities and objectives, and in communicating these priorities to donors. Several sections in UNHCR brief donors and it is important for the organisation's credibility that the briefings be consistent. In case of doubts regarding what should be presented to donors for funding, contact the Donor Relations and Resource Mobilization Service at Headquarters for advice.

50. Steer donors towards funding those activities or areas of the operation that are most in need of funding. When appropriate, promote regional funding. Do not forget that the emergency may have a regional dimension. Include this, and other elements of the UNHCR operation, in the briefing and be prepared to discuss funding for all aspects of the operation with donors.

51. Contributions tightly earmarked to one aspect of the operation impede flexibility. Sometimes substantial contributions are strictly earmarked and there is little scope for amending budgets once they are approved. Donors should be encouraged to make un-earmarked contributions whenever possible. However, if donors do want to earmark a contribution to a specific part of the operation, advise them to check with the DRRM at Headquarters to ensure that this portion of the operation has not been funded already, or offered for funding, to another donor.

52. Particularly in emergencies, donors may offer to supply in-kind contribution (i.e. commodities or services) rather than make cash contribution. To a large extent it will be up the Field to decide on the suitability of such contributions. The offer should be immediately reported to the DRRM and the donor requested to follow

up with Headquarters. In kind contributions need to be coordinated by Headquarters to avoid duplication of similar contributions by different donors, and to avoid confusion over the amount of cash versus total contribution.¹

Preparation of a flash appeal

53. The primary document for communicating with donors is the Flash Appeal. It is the appeal which needs to be brought to the donors' attention at briefings, and it is the activities in the appeal against which progress should be reported. It can be done in the context of inter-agency appeals led by the humanitarian/resident coordinators with the support of OCHA; or individually by agencies.

54. Flash Appeals are prepared and issued by Headquarters with strong inputs from the Field. If a supplementary budget is established, the operational requirements will be consolidated by issuing a Supplementary Appeal. No appeal can be issued without the prior approval of ORB on the programme.

55. Whenever possible, the government should be consulted in the development of the appeal. The appeal should also take into account the results of the initial assessment, and the budget should cover all foreseen expenditures.

56. If the situation changes dramatically during the emergency, and the current appeal becomes inappropriate, then the Field should review operational objectives and agree the new direction with Headquarters before the revised operation is presented to donors.

Communication between the Field and Headquarters.

57. Headquarters and the Field need to work together closely on funding and do-

nor relations issues. The focal point for this at Headquarters is the Donor Relations and Resource Mobilization Service. The Private Sector Fund Raising Unit at Headquarters may also issue submissions to the general public or aimed at individual or corporate donors.

58. Donor Relations and Resource Mobilization Service at Headquarters will:

- Advise how to deal with a particular donor.
- Provide latest information on funding for the operation.
- Follow up with Permanent Missions at Geneva and/or donor capitals on potential contributions discussed in the Field.
- Produce and distribute submissions (with the active participation of the Field).
- Prepare specific submissions to donor funding agencies (with the active participation of the Field).
- Finalize detailed reports to the donors.

59. The Field should:

- Produce the basic operation information and submission for the appeals.
- Inform Headquarters when a donor has indicated an interest in contributing funds, whether to the appeal, to a particular operation, to earmarked activities, or as a contributions in-kind, and should also ask the donor to follow up through the normal channels at Headquarters.
- Through Donor Relations and Resource Mobilisation Service, provide information to the donors about the current situation and UNHCR's plans. When deciding on a contribution, donors need relevant information. Some information will be in the flash appeal and given at briefings, but some donors require more detailed information. Timely and detailed responses will ensure the most rapid funding.

¹ Further information on contributions in kind can be found in "Making Contributions In Kind to UNHCR – A Guide for Donors, DRRM October 2000".

- Provide reports and information to Headquarters to assist it in submitting reports to donors. To ensure continuity of funding it is essential that the required information be provided from the Field without delay.

Reporting to donors and special requirements

60. A variety of reports are required by donors in order to account for their contributions and to release additional funds. Bear in mind that donor reporting cycles do not necessarily correspond to UNHCR's reporting and operation cycles.

61. Some major donors to UNHCR's emergency operation require particularly detailed reporting at both financial and narrative level in a unique format with strict deadlines. These special reports are prepared by the Donor Relations and Resource Mobilization Service at Headquarters on the basis of information from the Field. Some donors also monitor implementation directly through their local representatives.

62. A number of donors attach great importance to the visibility of their financial support, through the marking of assistance material and other means.

Formal written communications

63. When establishing a new UNHCR presence in a country, there is likely to be a need for a number of formal written communications to government or local authorities. The purpose of this section is to give brief guidance on the preparation of formal letters and "notes verbales" (formal notes written in the third person – see sample in Annex 2).

64. Formal letters are used for communications to ministers, ambassadors and senior officials (for example, the Director-General of a government department) on important matters.

65. Note the following points for written correspondence with ambassadors, ministers and other dignitaries:

- The proper opening salutation is: "Sir" or "Madam", with "His/Her Excellency" used, if appropriate, only in the address. However, it may be local practice to begin and end with "Your Excellency". When in doubt check with UNDP or use "Sir". His/Her Excellency precedes all other titles and ranks (e.g. Her Excellency Dr. X Y; His Excellency General A B, Minister of the Interior).
- The expression "I have the honour ..." is usually used only in the opening sentence.
- "You" can normally be used in the text. However, in a long text it may be courteous from time to time to interject the more formal address (e.g. "I should be grateful if you, Sir, [or Your Excellency] would confirm that this is also the understanding of your Government").
- Formal letters end with "Accept, Sir/Madam/Your Excellency, the assurances of my highest consideration".

66. A note verbale is a formal note written in the third person. Notes verbales may be addressed to a Minister for Foreign Affairs or a Ministry of Foreign Affairs, an ambassador or an embassy. Notes verbales are always used in replying to an incoming note verbale. It is written from person to person (e.g. Representative to Minister) or office to office (e.g. Branch Office to Ministry). The following points should be noted:

- Typical uses of notes verbales include the exchange of information between UNHCR and governments, embassies or permanent missions. The note verbale is not normally used to communicate with other United Nations agencies and is never used to address NGOs or the public. The note begins

- either, “The Special Envoy/Representative of the United Nations High Commissioner for Refugees in (country) presents his/her compliments to ... and has the honour to ...” or “the Branch Office of the United Nations High Commissioner for Refugees in (country) presents its compliments to ... and has the honour to ...”.
- ii. Titles must be given in full, at least in the opening and closing paragraphs. Be sure to use the full correct designation of the country (Kingdom of ..., Republic of ..., Democratic Republic of..., etc.)².
 - iii. The complimentary closing of a note verbale is always the same: “The (Representative/Special Envoy) of the United Nations High Commissioner for Refugees in (country) avails him/herself of this opportunity to express (renew) to ... the assurances of his/her highest consideration”, or, as appropriate, “The Branch Office ...” etc.
 - iv. The note should bear no signature. The Office stamp should be placed over the typewritten date and the officer responsible for its dispatch should sign his/her initials within the stamp. The Representative or Special Envoy and an alternate may be required to register their initials or even signatures with the protocol department of the foreign ministry.
 - v. The place and date should appear on the bottom right-hand side of the last page. The address does not appear on a note verbale.
 - vi. The text of the note verbale should be single spaced with double spacing between paragraphs.
67. Both formal letters and notes verbales may bear file references, as brief as possible, on the top left of the first page.
68. Notes verbales are always answered by notes verbales, and formal letters by formal letters. Apart from the restrictions on the use of notes verbales given above, there are no completely clear-cut rules about which to employ when UNHCR is initiating the communication. In general terms, the note verbale conveys brief information and is the normal form for routine exchanges with the protocol department, for example, when seeking customs clearance for relief supplies or advising of the arrival of international staff. References to important meetings with senior officials and major issues, particularly those already discussed, are better treated in a formal letter. A formal letter may also reach the action officer more quickly than a note.
69. If it is necessary to set out UNHCR’s position on a specific subject (policy, action taken, intentions, etc.), this may be done in the form of an aide-mémoire written in the third person. An aide-mémoire has no addressee and is simply headed Aide-Mémoire, with the title below. A similar purpose is served by a “Note by the Office of the United Nations High Commissioner for Refugees”, a minor difference being that this description goes below the title. An aide-mémoire would normally be used to convey information to a government ministry or department, an embassy or the diplomatic corps. For a less formal or wider distribution, the “Note by ...” form may be appropriate.
70. All four types of communication should be presented on UNHCR letter-head stationery.

A Executive Committee Conclusion No. 91 of 2001		177

Situation

Refugee emergencies are characterized by a mobile population, often with rapidly fluctuating numbers. While it may be difficult to collect exact information on the total number and composition of the population, every effort should be made to obtain individual information, progressively through phases, to better assist the population.

Objectives

- To obtain working figures on the population of concern, including a breakdown of the population by age, sex, and groups with specific needs.
- To obtain detailed individual information on the population of concern which will help to better identify protection needs and to deliver more appropriate assistance.

Principles of response

- If refugees are still on the move, the influx is rapid or there are concerns for general security, an estimation of the population should be conducted to obtain working figures until the situation stabilizes and is conducive for registration.
- Registration is the primary responsibility of the refugee hosting government; however, in an emergency situation, UNHCR may be called upon to conduct the registration on their behalf. It is essential to involve the government from the early stages of registration planning.
- Knowing the size and profile of the refugee population is essential for an efficient and cost-effective operation and is at the core of UNHCR's protection mandate. Refugee registration will serve as the basis for various standards and indicator reporting.
- Involvement and understanding by the refugees (women and men) themselves is essential to the success of registration.

- The information collected will be important in planning for the care and maintenance in the country of asylum, as well as for voluntary repatriation and reintegration in the country of origin.
- Individual registration is the standard and the ultimate goal. Where this is not immediately possible, it can be achieved progressively in stages, starting with a household level registration. At each phase of the registration process, it is crucial to computerize the information as soon as possible to facilitate programme delivery and beneficiary analysis.
- Continuous registration and verification is the norm. Information needs will change through the course of time and the first registration should not necessarily attempt to collect all the information at once.

Action

- Use population estimation techniques only if the situation is not conducive for a more thorough registration or during the initial days of an influx.
- Conduct a household registration as early as possible.
- Plan towards an individual registration, keeping the population and partners (government, WFP and the NGO community) informed.
- Identify resources which will be required for a full registration.
- Define the protection and operational strategy,¹ and consult the Regional Registration Officers and HQ in planning for an individual registration exercise as soon as feasible.

¹ See: *How to Register; Manage Population Data and Issue Documentation process. (Registration Handbook –2006).*

Introduction

- Knowing how many refugees there are and who they are is fundamental for planning and managing an efficient operation. It is also essential for public information and fund raising.
- Successful registration needs good planning, careful implementation and consistent monitoring. Individual population records need to be continuously updated to ensure that registration data reflects the actual situation at all times.
- To plan and manage an efficient operation, it is critical to know the size and the profile of the refugee population. It is also important to have good baseline data to ensure that you are meeting minimum standards.¹ An accurate enumeration is therefore an essential component of any assessment.

1. Chapter II, 8(f) of the UNHCR Statute states that the High Commissioner shall provide for the protection of refugees by “obtaining from Governments information concerning the number and condition of refugees in their territories.” It must be made clear to the authorities that an assistance operation cannot be carried out without this information.

2. Executive Committee Conclusion No. 91 of 2001 (Appendix A) sets the standards for the registration of persons of concern to UNHCR and acknowledges “the importance of registration as a tool of protection, including protection against refoulement, protection against forcible recruitment, protection of access to basic rights, family reunification of refugees and identification of those in need of special assistance, and as a means to enable the quantification and assessment of needs and to implement appropriate durable so-

² For example, if the population figure is higher than reality, the crude mortality rate when calculated will be low or below critical but in reality there may be more than e.g. 1 death per 10,000 person per day.

lutions.” It also recommends that refugees should be registered on an individual basis.

Although individual registration is the standard to be achieved within the first 3 months of an influx³, this should not be an automatic response at the start of an emergency.

3. Although every effort should be made to create the conditions in which registration can be achieved, there may be situations in which registration activities may be inappropriate or not feasible. Situations in which registration should be delayed include:

- **Populations that are still moving:** If refugees have not yet reached a destination, whether temporary or final, registration can be difficult to organize and manage. In addition, registration formalities might compromise the flight to safety, part of the population may be missed in the registration activities, and there is a risk of multiple enrollments.
- **Proximity to borders:** Registration may have to be avoided for security reasons or to avoid mixing the refugee population with armed elements moving back and forth across the border. There may also be mixing with the local population living on both sides of the borders.
- **Security problems:** Under no circumstances should registration activities be carried out if they are deemed to be or become detrimental to the safety and security of refugees or to the security of staff.
- **Saving lives is a high priority:** Saving lives is more important than registering people. In circumstances where staff must concentrate on other priorities, registration may not be

³ As agreed with WFP under the joint UNHCR and WFP Memorandum of Understanding (July 2002).

carried out. This is often the case in the first few weeks of an emergency when the level of trauma amongst arriving refugees is high, or where the response by UNHCR or its partners is not fully implemented.

4. Where formal registration is not possible, efforts should concentrate on population estimates, rate of influx, general characteristics of the population and information on origin and destination. There are a number of methods for population estimation which do not require a formal registration. In circumstances where minimal conditions for operation do not exist, these methods may be preferable as an initial first response.

5. Information compiled through a registration process is required to support a wide range of activities. The same set of core data is used for different purposes, although most also require specific additional information and variations in the registration steps. These may include:

- Issuance of identity documents
- Refugee status determination
- Planning and targeting of assistance (food, shelter) and services (health, water)
- Issuance of documents providing access to services (ration cards, health cards)
- Identification of beneficiaries with specific needs
- Voluntary repatriation
- Resettlement
- Local integration

6. The most practical time to register refugees is when they arrive at a reception/transit centre or site for settlement. Registration is often carried out in conjunction with health screening. Transferring refugees to a new site also provides an opportunity for registration.

7. Discrepancies may arise over time between official figures and the estimates of those working closest to the refugees. Unless these discrepancies are swiftly resolved, major problems will follow. Small discrepancies are likely, given the difficulties in enumeration and registration. Large ones can be avoided by timely action to verify numbers through the various methods set out in this chapter. The key point for registration is that it is not a one-off exercise – it is a continuous process that is incorporated in the day to day activities of the operation.

8. For detailed information on registration and population estimation techniques, refer to UNHCR Handbook for Registration (2006) and UNHCR/WFP Joint Assessment Guidelines – First Edition (June 2004).

Population estimates

- Population estimation techniques should be used when basic ground conditions are not conducive for a registration. For example, during the very initial phase when refugees are still on the move, the influx is rapid and any activity would create a bottleneck for the delivery of essential assistance or there are concerns for general security.
- For most methods of population estimation, it is important to understand the community structure of the beneficiary population. It may be necessary to employ several methods of estimation to obtain a better estimate.
- Estimates should be updated regularly until the situation stabilizes and is conducive for registration.
- The estimates should be obtained in close cooperation with the Government, WFP and other partners on the ground.

Introduction

9. The following methods can be used to estimate the population:

- i. Counting
- ii. Administrative records
- iii. Lists compiled by refugee leaders and/or outreach teams
- iv. Extrapolation including the use of aerial photographs and satellite imagery

10. Understanding the community structure of the beneficiary population is important for most methods of population estimation – for example, living arrangements and the average number in a family group.

11. Annex 1 provides a format for reporting population estimates as part of an overall situation report. Estimates should be updated regularly and the methodology should be determined jointly with other key partners who are affected, e.g. WFP who will deliver food based on the estimated numbers.

Counting

12. If there are easily identified entry or transit points during a refugee influx (e.g. bridges or transportation sites), daily counts of the number of people passing through these points can give a reasonable estimate of the refugee population. Sufficient staff should be immediately positioned at bridges and other critical points to provide 24-hour coverage. These staff members should be provided with counters to aid counting and with simple recording and reporting forms. See Annex 2 a.

Administrative records

13. Local authorities or volunteers at the refugee site may collect population data on the refugees. If possible, national census and other population data should be obtained from the country of origin as a means of cross-checking the host area data.

Lists compiled by refugee leaders

14. Lists of names can be compiled by refugee leaders and verified through a process agreed with the refugee community. If this method is taken, it is essential to harmonize the information collected at all locations for easy comparison. See Annex 3 for the minimum information to be collected.

To ensure that the population estimates are as accurate and as fair as possible, it is particularly important to understand the community structure.

15. The normal community structure and hierarchy in a society are often disrupted during exodus and new leaders can emerge who were not necessarily leaders in the country of origin. It is essential to understand the role, motives and effectiveness of the new leadership. Community services and field staff can help in this. Initial records compiled by refugee leaders may eliminate the need for immediate registration; however the information provided should be randomly checked and verified and regularly updated. Once the situation stabilizes, the registration should be streamlined into the regular activity.

16. The lists can also be useful in identifying refugees with specific needs who require special assistance. Community services staff and health outreach teams should visit such individuals and families to confirm the accuracy of lists provided by the leaders. This method can also be used in non-camp spontaneous settlement situations, and/ or populations on the move (nomadic).

Extrapolation

17. Population estimates can also be obtained by calculating the total area of the camp, then counting shelters in a fraction of the camp, from which the population of the whole camp can be extrapolated. Alternatively, aerial photograph or satellite images may be used to count the number of shelters.

18. In all scenarios, it must be accompanied by a ground survey to establish the average family size per shelter and the percentage of empty shelters.

19. The total surface area of the camp can be determined in a number of ways. Below are some examples on how it can be determined:

Area calculation based on measurement made with a Global Positioning System (GPS) receiver. GPS uses satellites to establish and indicate the latitude and longitude of its current position. The device does not work under heavy forest cover or in deep narrow valleys because it needs an unobstructed sightline to several satellites. It is important to note in which coordinate system the GPS receiver is displaying the positions. UNHCR uses WGS84 in latitude and longitude as standard, the format of the coordinates being degrees (°) minutes (′) and seconds (″), dd mm ss.. This should normally be the setting for any GPS receiver at all times. Due to the accuracy of the GPS, it is not recommended to measure areas below 200m x 200m. The table below indicates the error in percentage that a GPS might give on a square area assuming the accuracy is +/- 10m:

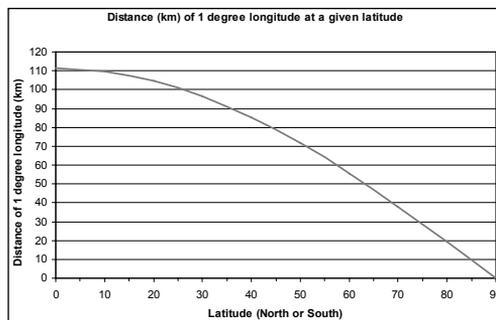

Area	Maximum error on surface calculation
100m x 100m	+/- 20%
200m x 200m	+/- 10%
300m x 300m	+/- 7%

a) *Automatic area calculation using a GPS.* Many GPS receivers have a function to calculate an area from measurements made while walking the perimeter of the area. It is important to slowly follow the perimeter of the area to be measured and to make sure that the track does not cross itself since that would make the calculated area incorrect. Consult the handbook for the GPS receiver for exact instructions on how to calculate an area automatically.

b) *Area calculation based on points measured with GPS.* If the GPS has no function for calculating the area, it can be used to

measure all break points on the perimeter enclosing the camp. Any simple GPS receiver can be used to measure the points, for example the Thuraya phones that have a built in GPS. The more irregular the camp's shape, the more perimeter points will be needed. Once the break points have been measured the area can be calculated.

The lines of latitude are parallel and evenly spaced with approximately 111 km for one degree latitude. The distance which a degree of longitude represents on the ground varies with the latitude. This is because lines of longitude converge at the poles and thereby make the distance represented by one degree of longitude smaller moving away from equator towards the North and South poles. It is necessary to know the distance which one degree represents at the exact location of the camp, for example by determining it with help of a map of the area, if it is sufficiently large scale. The length of a degree at any given latitude can be found in the graph below.

Many GPS receivers have a function for selecting the format in which the positions are being displayed. To avoid the calculation of the length of a degree, the positions can be displayed and recorded in a metric system directly. A very common metric system is the coordinate system Universal Transverse Mercator (UTM). There are 36 different UTM zones and each UTM zone is six degrees of longitude wide. Either the GPS receiver detects the actual zone by itself or it has to be entered.

Once the camp perimeter points have been measured, the surface area of the camp can be calculated in the following ways:

- i. The perimeter's breakpoints can be marked on paper which has scaled gridlines by using the Y-axis to represent longitude and the X-axis to represent latitude. A line is drawn joining these points. Counting the scaled squares inside the perimeter will give the total area. Make sure that the correct scale factor for the length of a degree is being used.
- ii. Geographical Information Systems (GIS) can automatically map and calculate an area based on the perimeter points measured with GPS. Technical assistance for setting up this software can be obtained from Field Information and Coordination Support Section, (FICSS) at HQ (hqmap@unhcr.org).
- iii. FICSS can also assist in calculating the area for the measured points. Communicate the perimeter coordinates to FICSS at HQ (hqmap@unhcr.org).
- iv. Calculation from an existing map: If there is a map of the camp, the surface area of the camp can be estimated by overlaying scaled gridlines on the map, and adding up the number of the squares falling within the camp's boundaries.

Area estimation: The estimated area can be calculated by using the average length and average width of the camp and other necessary measurements depending on the shape of the camp. The length and width can be measured with a GPS receiver, by pacing, or by using a wheel meter or measurement tape (if the camp is small), or by driving (if the camp is large), using the trip meter to estimate distance.

Once the surface area has been established, select a minimum of three sample areas within the camp, each representing about one thirtieth of the total camp area.

For example, if the total surface area of the camp is 600,000 sq. m, then each sample area should be 20,000 sq. m. Any variation of length or width which yields 20,000 sq. m could be used for the sample sections. The normal GPS is not sufficiently accurate for use in measuring the size of the sample area and conventional means of measuring should be used instead.

20. Count the number of family shelters occupied in each of the three sample sections. Obtain a figure for the average number of shelters per section (i.e. – in 20,000 sq. metres). Then multiply by 30 to extrapolate this over the entire camp.

For example, if 3 sample sections have 120, 134, and 150 occupied shelters respectively, then the average number of shelters in a sample section will be $(120 + 134 + 145) / 3 = 133$. Thus the total number of occupied shelters in the 600,000 sq. metres camp will be $133 \times 30 = 3,990$ shelters.

21. Determine average family size per occupied shelter to estimate the total population. For example, if the average family size per shelter is 5, then the total population is $5 \times 3,990 = 19,950$.

22. Alternatively, aerial photographs (or sometimes videos of a camp) or satellite image can be used to count the number of family shelters. Depending on the topography, a picture from a nearby hill, tower or tall building may be sufficient. In addition to professional aerial photography or satellite images, photographs taken, for example, from a UNHCR plane can be used for estimation. It is important to define an appropriate scale for the photography. This will depend, in part, on the size of the camps. High altitude flights produce fewer photographs to handle and interpret, but it will be more difficult to distinguish the shelters. Note, however, that flying over the site may require the permission of the authorities.

23. Once the number of shelters is counted on the photo, it can be multiplied

by the average family size per shelter to obtain an estimated total population. If the ground survey indicated that there are some percentages of empty shelters, ensure that this is factored into the shelter calculation.

24. The results of aerial surveys or satellite images can be integrated within the GIS from which maps can then be produced. This is also true for the GPS coordinates collected during the surface calculation. The coordinates can be a base to create camp maps.

TIP: If there are various estimates floating around, a quick count of all children under five years old in the camp or in a section of the camp (that can then be extrapolated for the camp) can be used to cross-check the various estimates. For most developing countries, the percentage of under 5 year-old range between 15- 20% of the population.

Registration

- Registration provides the more detailed information needed for the efficient management of an assistance operation.
- Registration is carried out over several phases.
- Individual registration should be the final goal and should also be continuously updated, including deregistration of those no longer of concern, to avoid becoming irrelevant.

Introduction

25. For effective protection and assistance delivery, individual and demographic information obtained through registration is imperative. Information requirements will change during different phases of an operation (emergency, care and maintenance, VolRep); therefore, the initial registration should be followed by continuous verification of information and additional information collection to ensure up-to-date information.

26. There are 3 levels of registration which are determined by the amount of information collected. Level 1 is household registration which should take place immediately upon arrival of the refugees. Level 2 is individual registration required for prima facie caseload/camp management or voluntary repatriation which should be achieved within 3 months from the influx. Level 3 is individual registration required for status determination, local integration and resettlement. The information below relates mainly to initial registration at the time of an influx. For further details, refer to the registration handbook.

Registration is not a one-off exercise. Individual and continuous registration is the UNHCR standard for registration.

27. In order to cope with large numbers, normally household registration is conducted immediately, followed by individual registration according to the immediate needs of the population and the time and staff available to carry out the task. In some situations, the operation may go directly into individual registration. Registration should only be carried out when:

- i. the safety of the staff and of the refugees can be assured;
- ii. the refugees and other stakeholders accept the process;
- iii. the key partners can supply personnel to help carry out the registration; and
- iv. there are sufficient quantities of registration materials and other equipment, including logistical support and communications.

28. There are 4 main phases in registration, regardless of whether you conduct a household registration or an individual registration. In all stages, staff training and full understanding of the process involved is essential for the success of the exercise. The 4 main phases in registration are:

- i. assessing and determining the registration strategy;

- ii. collecting information and issuing registration cards;
- iii. computerization; and
- iv. Verification and updating.

29. The ‘ideal’ in registration is to work as closely as possible with the refugee population and its leadership, especially refugee women, to ensure their concerns are noted, promoting community responsibility and participation in all stages of the process. Whilst this may not always be possible initially, it should be a major objective for both registration and camp management.

30. Formal registration requires considerable time and personnel resources and needs the active involvement of key partners to supply the necessary personnel. Key partners include government, other UN agencies, NGOs and the authorities responsible for security. See Excel sheet in the CD-ROM which helps to give an idea for registration staffing and equipment requirement; however, this will change depending on the operating environment. Case by case support is provided by the Senior (Regional) Registration Officers covering the country who can advise on the best methodology for a particular situation. List of country coverage is attached as Annex 4.

Standard UNHCR registration materials

31. Standard materials for registration are stockpiled at Headquarters and are sufficient to register 300,000 refugees. The materials include standard cards and forms, wristbands, fixing tokens, etc. These materials are included as part of a refugee registration package. Please refer to the catalogue of Emergency Response Resources which has further details of these resources and how to obtain them.

Registration phases

Phase 1: Assessing and determining the registration strategy

32. This is the initial step to determine the registration methodology based on estimated or existing planning figures. It is crucial to review the available information and to build on it rather than start everything from scratch.

33. Designate a focal point to take responsibility for planning and executing the registration. A pilot registration in a small camp can help identify potential difficulties. Planning should be a joint exercise with the concerned partners, including refugees. Staff training, including basic protection training may be required at this stage. Ensure that the necessary staffing, equipment, supplies, security, telecommunications, vehicles and logistical support will be available on the date of the exercise. Decide on the level of information to be collected on a control sheet or registration form, and ensure planning includes procedures for data entry computerization.

34. At the same time as planning, there should be an intensive information campaign aimed at the refugee population at large (not just the leaders) informing the refugees of the procedures and benefits of registration. Special arrangements should be made to cater to the needs of those who are unable to spend time in queues and under the hot sun for example, such as older persons and those with disabilities.

Phase 2: Collecting information and issuing registration cards

35. Registration should be conducted on a “fixed” population. This means that the size of the group on whom more detailed information will be collected needs to be temporarily frozen. Without some kind of “fixing”, registration will become a revolving door, open to escalating distortion and abuse.

36. Depending on the situation and the availability of previous lists, the “fixing” can be done in different ways. Tradition-

ally, it was done using tokens and wristbands. (See Annex 5) It must be done rapidly (preferably within a few hours, maximum one day) to avoid multiple and/or bogus registration. While the population may be given only short notice of when this will take place, it is necessary to ensure that they understand what is happening. This method is best used when absolutely no prior information exists for the population.

37. In situations where an initial “large influx” has stabilized to a steady trickle of hundreds, fixing tokens or wristbands can be issued at entry/transit points. This would “fix” a population and indicate who needs to be registered at the camp in the following days. (See Annex 2 b)

38. Alternatively, when you have a control sheet or an existing assistance list (such as food list) compiled by an NGO working with the refugee population, this list can be used as a “fixing” tool. The accuracy of the list should be verified by random sampling and a review of the process used to compile the list. Those who are not on the list need to be interviewed and verified to determine whether they are persons of UNHCR’s concern. Another method is to conduct a tent to tent (or shelter to shelter) verification to create a list of refugees who would be registered.

39. In a scenario where there is a manageable rate of new arrivals to a camp, the registration can take place upon arrival. The “fixing” element of the registration may be the convoys arriving from the border (or foot arrivals in the transit area of the camp) and through allocating tent/shelter plots in the camp. In this situation, the families are allocated a fixed tent/shelter in the camp and fully registered. The operation can go straight into continuous registration/verification, by using the camp address as a verification tool.

40. In planning for this phase, it is essential to pay attention to the flow of people coming in for registration. Security inci-

dents may occur if there are bottlenecks or long waiting periods, disorganised procedures, and large numbers of beneficiaries exposed to extreme conditions (heat, cold, sandstorm, etc.). See Annex 6 for a sample site set-up. Communication with the beneficiary population is essential to ensure that they are fully aware of the procedure and what it entails.

41. Below are 2 levels of information collection and entitlement card issuance – depending on the operating environment.

a) Collecting limited information on control sheets and issuing temporary family cards

42. Collecting information and issuing temporary family cards should be carried out immediately after the “fixing” and preferably, before any food or NFI distribution. Usually there will be no time to collect detailed information immediately, yet assistance should be distributed urgently and basic demographic data is needed. The first step therefore is to exchange the fixing token or wristband (if used) for a temporary family card (see Annex 7) to all heads of family, and collect limited information on control sheets (see Annex 8). In most instances this information will be limited to the names of the head of family, family size, age and sex breakdown of the family members and the number of the temporary family card, with an indication of any immediately visible vulnerable family members.

43. The control sheet can be used as a beneficiary list until the information is computerized to create distribution lists.

b) Completing registration forms and distributing ration cards

44. The second step is to record detailed information about the families on registration forms (see Annex 9) and to issue longer-term ration cards (the standard UNHCR card lasts about one year or 24 to 36 distributions). When it is done after the issue of temporary family cards it

can be spread over a longer period of time, with a cut-off date for the validity of the temporary cards.

45. For operations without assistance delivery or where refugees have been accepted in the local communities (spontaneous settlements), the individual registration should still be undertaken for protection and eventual durable solutions.

The registration form constitutes the core document of a UNHCR registration and will provide the basis for future reference, analysis, verification and updating of information.

46. This step provides a verifiable link between the identity of persons of concern and the very simple forms needed for processing large numbers of people for assistance distribution. The two-step process of information collecting is normally used because the second step can take considerable time, and registration information is needed in the interim for commodity distribution.

47. One key aspect to registration is the use of standard codes. This is essential in order to obtain data which is easily comparable and analysable. Further, it facilitates the collection and input of data. It is particularly important to have personnel who speak the language of the refugees and to ensure there is a common transliteration between alphabets, particularly for names. See Annex 10 for parts of the standard code list. The full list is in the CD-ROM.

Phase 3: Computerization

48. Computerization must start immediately when any form of entitlement card (temporary family card or ration card) has been issued. Any assistance delivery must use a combination of an entitlement card and a beneficiary list.

49. Data can be entered on-site by trained data-entry clerks or by outsourcing to an off-site specialized data entry com-

pany. If a data entry company is hired, it is essential that they sign a confidentiality declaration. The data should be computerized as soon as possible and not more than a few months after being collected on the registration forms or control sheet, otherwise it will be outdated and unusable.

50. Refugee data is normally processed using *proGres* (UNHCR standard registration software). *ProGres* is a holistic registration and case management tool which can be used during an emergency phase to record personal bio-data, to capture individual photos, and to create beneficiary lists. If the emergency is taking place in a remote location with very basic infrastructure, it is possible to record the data in Excel with a view to migrate to *proGres* at a later stage. See Excel sheets and user guide in the attached CD-ROM. Operations are advised to migrate their registration data to *proGres* as soon as the situation stabilizes.

If the Excel option is selected, it is strongly recommended to use the sheets attached in the CD-ROM. Any modification should be done in consultation with FICSS and *proGres* Support to ensure the data can be migrated to *proGres*.

51. Country specific advice on the best registration method or process for the situation can be obtained from either the Senior Regional Registration Officers covering the country or from FICSS (hqcs00@unhcr.org) in HQ. Technical support on *proGres* can be obtained from *proGres* Support Desk (hqprosup@unhcr.org).

Phase 4: Verification and updating

52. Registration information must be updated as the population changes with births, deaths and population movements. It is important to deregister and close cases when the persons are no longer of concern. There should be a procedure to do this from the start and it should be documented in the Standard Operating Procedure to ensure consistent practice. This

is especially important during the emergency phase when there is a high turnover of staff.

53. Registration and verification should not be a one-off exercise conducted once every year. The registered numbers and information should be continuously cross-checked with other available information, for example, births and deaths can be monitored through the health services, and population movements monitored through any of the methods for population estimation described above. Verification can also be conducted during food distribution, house to house visits by community services/community health workers, through school enrolment etc. The method of reporting back field findings should be agreed as early as possible at the onset of an emergency to ensure that most up-to-date information is available centrally. In order to facilitate the verification process, shelters should be given an address (block/ community/individual shelter number) which will be linked to the individual family registration information. Assistance to set up “Continuous Registration Process” is available with FICSS and the Regional Registration Officers.

A situation where various agencies maintain their own lists which are not shared or sharable should be avoided.

54. Entitlement documents (such as ration cards) and identity documents (such as attestation letters or ID cards) are 2 distinct documents which should not be mixed in use. Identity documents confirm the status of the persons of concern whereas entitlement documents confirm that a person or family is entitled to a specific assistance. For example, being a refugee does not automatically imply that a person is entitled to a certain type of assistance. Both documents can acquire monetary value, depending on the context. To ensure the refugees are not using other people’s documents or forged documents there should be a system to check the documents, for example random verification at food distribution points.

It is important to emphasize the difference between entitlement documents and identity documents. This means that the total population of concern to UNHCR (with identity documents) can be higher than the number of beneficiaries (with entitlement documents).

Annex 3: Minimum information to be collected

The information listed below is the minimum information to be collected if a list is to be maintained by community leaders. The information can be collected in a ledger book or notebooks provided to the block leaders (if the camp is organized). As indicated earlier, it is essential that the leaders are made fully aware that this is a temporary measure and that verification will take place as soon as the opportunity arises.

- Name (first/ given and family name), of head(s) of household
- Sex
- Age/ date of birth
- Relationship to the head(s) of family
- Marital status
- Place of origin
- Date of arrival
- Family size
- Ration card number
- Camp address
- Specific needs groups

2001 Executive Committee of the UNHCR Programme (52nd Session)

**Conclusion No. 91 (LII)
REGISTRATION OF REFUGEES AND ASYLUM-SEEKERS**

The Executive Committee,

Recalling its Conclusion No. 22 (XXXII) on the protection of asylum-seekers in situations of large-scale influx, Conclusion No. 35 (XXXV) on identity documents for refugees, Conclusion No. 39 (XXXVI) and Conclusion No. 64 (XLI) on refugee women and international protection, as well as Conclusion No. 73 (XLIV) on refugee protection and sexual violence;

Noting also that the 1951 Convention relating to the Status of Refugees in article 27, calls on States Parties to issue identity papers to refugees;

Mindful of the importance accorded to registration in the independent evaluation of UNHCR's emergency preparedness and response to the Kosovo crisis;

Welcoming the discussion which took place on registration in the context of the Global Consultations on International Protection;

- (a) *Acknowledges* the importance of registration as a tool of protection, including protection against *refoulement*, protection against forcible recruitment, protection of access to basic rights, family reunification of refugees and identification of those in need of special assistance, and as a means to enable the quantification and assessment of needs and to implement appropriate durable solutions;
- (b) *Recommends* that the registration of refugees and asylum-seekers should be guided by the following basic considerations:
 - (i) Registration should be a continuing process to record essential information at the time of initial displacement, as well as any subsequent demographic and other changes in the refugee population (such as births, deaths, new arrivals, departures, cessation, naturalization, etc.);
 - (ii) The registration process should abide by the fundamental principles of confidentiality;
 - (iii) The registration process should to the extent possible be easily accessible, and take place in a safe and secure location;
 - (iv) Registration should be conducted in a non-intimidating, non-threatening and impartial manner, with due respect for the safety and dignity of refugees;

(v) Personnel conducting the registration, including, where necessary, refugees and asylum-seekers, should be adequately trained, should include a sufficient number of female staff and should have clear instructions on the procedures and requirements for registration, including the need for confidentiality of information collected; special measures should be taken to ensure the integrity of the registration process;

(vi) In principle, refugees should be registered on an individual basis with the following basic information being recorded: identity document and number, photograph, name, sex, date of birth (or age), marital status, special protection and assistance needs, level of education, occupation (skills), household (family) size and composition, date of arrival, current location and place of origin;

- (c) *Encourages* States and UNHCR, on the basis of existing expertise, to develop further and implement registration guidelines to ensure the quality and comparability of registered data, especially regarding special needs, occupational skills and level of education;
- (d) *Also encourages* States and UNHCR to introduce new techniques and tools to enhance the identification and documentation of refugees and asylum-seekers, including biometrics features, and to share these with a view towards developing a more standardized worldwide registration system;
- (e) *Acknowledges* the importance to the international community, particularly States, UNHCR and other relevant organizations, of sharing statistical data;
- (f) *Recognizes* the confidential nature of personal data and the need to continue to protect confidentiality; also recognizes that the appropriate sharing of some personal data in line with data protection principles can assist States to combat fraud, to address irregular movements of refugees and asylum-seekers, and to identify those not entitled to international protection under the 1951 Convention and/or 1967 Protocol;
- (g) *Requests* States, which have not yet done so, to take all necessary measures to register and document refugees and asylum-seekers on their territory as quickly as possible upon their arrival, bearing in mind the resources available, and where appropriate to seek the support and co-operation of UNHCR;
- (h) *Emphasizes* the critical role of material, financial, technical and human resources in assisting host countries in registering and documenting refugees and asylum-seekers, particularly developing countries confronted with large-scale influxes and protracted refugee situations.

A community-based approach and community services

Introduction

A community-based approach and community services¹

1. UNHCR's strategy for reinforcing a community development approach² emphasizes that all persons of concern should be considered as resourceful and active partners. A community-based approach is an inclusive partnership strategy, a process, and a way of working with persons of concern that recognizes their individual and collective capacities and resources and builds on these to ensure their protection. The approach seeks to understand the community's concerns, capacities, and priorities and to engage women, men, girls, and boys of all ages and diverse backgrounds as partners in protection and programming. In an emergency, the role of UNHCR is to recognize the resilience of the community members, work with them as equal partners in designing, implementing and evaluating protection and assistance responses and strengthen their capacity to build solutions for the future.

Situation

2. Conflict, war, persecution and displacement are devastating for individuals, families and communities. People often lose their livelihoods, their land, their property and belongings and their entire way of living. Displaced women and men are forced to live in makeshift emergency shelter, overcrowded camps and centres while struggling to protect their dependents, particularly young children and those with specific needs such as persons with disabilities and unaccompanied older persons. Adolescent boys and girls are uprooted and find themselves suddenly

without the familiar structures of school and home and often face serious protection risks such as military recruitment and exploitation. Women and girls are particularly affected. Sexual and gender based violence is frequently present during conflict and continues into the emergency setting. Much can be done to improve the protection of women, girls, boys and men through the manner in which an emergency is responded to by the emergency team.

3. Normal and traditional community structures, which may have regulated community well-being, may have broken down. Social and psychological problems are created and exacerbated. New response mechanisms will emerge possibly with new leadership structures, which may or may not be representative of all members of the community. Negative coping mechanisms might also arise as people struggle to meet basic needs. Developing a community-based approach and providing community based services in an emergency requires a full understanding of these community dynamics, the economic, legal, social and political context, as well as the roles of women, girls, boys and men and the power relations between them and between different majority and minority groups.

Objectives

4. During the emergency phase, UNHCR and partner multi-functional teams³ should work to:

- Implement a community-based approach, including participatory assessment, in the emergency operation to ensure that the follow up phase supports communities to regain control of their lives as quickly as possible.

¹ *The manual Community-Based Approach in UNHCR Operation, will provide details on community-based approach and different techniques for its implementation.*

² *Standing committee meeting document Reinforcing a Community Development Approach, 15 February 2001.*

³ *A multifunctional team is, at a minimum, composed of protection, programme, and community service staff. Ideally, it should include female and male staff, both national and international and of different levels and government and non-government partners.*

- Support the re-establishment and/or development of refugee community-based structures which are representative of the population from an age, gender and diversity perspective and respect international legal standards.
- Provide and support opportunities that are community based to explore livelihoods for men and women with the purpose of gaining food security and earning incomes to meet other basic living standards.
- Provide targeted community-based services for those groups with specific needs and ensure regular monitoring and follow up to identify protection risks and assistance gaps.
- Establish an effective community services system for community-based activities.

Principles in an emergency response

5. Work in partnership and adopt a multi-functional team approach: An effective UNHCR emergency team needs to ensure that protection, programme, community services, field, technical staff and others coordinate closely and adopt complementary working methods, sharing information and agreeing on common goals. Such an approach requires mutual understanding and respect of the complementarity of different functions combined with a respectful attitude to the women, men, girls and boys of concern and a commitment to work with them as partners. A multifunctional team approach includes partnership with government organizations, UN agencies, implementing and operational national and international non-governmental organizations to ensure a multi-lateral ownership for refugee protection. A multifunctional team is, at a minimum, composed of protection, programme, and community service staff and should include female and male staff.

6. Participation and transparency: The first step to setting up a community-based

approach is for multifunctional teams to undertake participatory assessment by holding separate discussions with women, men, girls, and boys, including adolescents, in order to gather accurate information on the specific protection risks they face and the underlying causes of those risks, to identify their capacities and resources, and to hear their proposed solutions.⁴ Participatory assessment helps to mobilize communities to take collective action to enhance their own protection and encourages individual, family and community self-esteem.⁵ The findings from the participatory assessments should be analysed from an age, gender and diversity perspective and be used to define the protection strategy and the emergency operations plan. Teams must also take steps to share the outcomes of the findings, to understand and verify the analysis and planning decisions with the community, as well as work with the different members to evaluate the impact of service delivery early on in the emergency and correct mistakes in a timely fashion. Information, particularly in an emergency, must be disseminated in different manners to reach all people in the community.

7. Equality and non-discrimination: The UNHCR code of conduct states that “From the outset of an emergency, refugees and other people of concern to UNHCR must be treated equally and with respect and dignity regardless of race, sex, religion, colour, national or ethnic origin, language, marital status, sexual orientation, age, socio-economic status, disability, political conviction, or any other distinguishing feature”.⁶ This requires staff to ensure that they take steps to dialogue with persons from different backgrounds and not only

⁴ Please refer to the *UNHCR Tool for Participatory Assessment in Operations*, UNHCR, 2006.

⁵ *The manual on Community-based Approach provides details on principles as well as techniques in community participation.*

⁶ *UNHCR’s Code of Conduct, Commitment Number 1.*

focus on leaders, who are often traditionally male. This is particularly important in an emergency. Leaders might be selective in providing and distributing information. This can result in inequitable assistance distribution and serious oversights in terms of protection risks, for example in the case of unaccompanied and separated children, child headed households, young adolescent girls or older persons on their own.

Key Actions to be undertaken using a multi-functional team approach

Implement a community-based approach, including participatory assessment, in the emergency operation to ensure that the follow-up phase supports communities to regain control of their lives as quickly as possible.

8. The implementation of a community-based approach means placing refugee women, men, girls and boys of diverse backgrounds at the centre of decision making for how protection and assistance will be provided at the outset of the emergency phase. This will ensure that protection strategies and the delivery of assistance are adapted to the specific culture, traditions and structures of the refugee community. This approach will enable each community to participate directly in the decisions affecting their future, to regain control of their lives and support their empowerment. A community-based approach seeks to build trust and mutual respect between UNHCR, its implementing partners and the people of concern. In order to facilitate and promote participation and decision-making as well as to obtain a good understanding of the dynamics within the community, the delivery of services must be developed and monitored together with the different members. A constant information exchange should be maintained between the community and service providers on the quality of the services and to monitor that all groups, particularly those with specific needs and those who might

be excluded traditionally such as single women, are benefiting from the assistance. Refugees need to know that they should contribute to the decisions, what they can expect, what our limitations might be, the time frame for assistance and based on this information, participate in decisions to prioritize the assistance and its delivery.

Principles of empowerment

9. Awareness raising and critical analysis of the situation: Awareness raising with women and men of concern is a process of critical analysis of their situation and their roles and contributions in resolving protection risks and exercising their rights. The impact of emergency activities should be analysed carefully with both women and men to ensure that they promote empowerment and gender equality and that solutions are identified.

10. Meaningful participation: Participation⁷ refers to the full and equal involvement of men and women of all ages and backgrounds in all decision-making processes and activities in the public and private spheres that affect their lives and the life of their community. As women are traditionally disadvantaged and excluded this often requires taking positive action to support women's access to decision-making processes, especially in emergencies.

11. Mobilization: Mobilization is the process of bringing men and women together to discuss common problems and establishing community responses with the support of the humanitarian workers. This can lead to the formation of women's groups, organizations, and networks, and

⁷ *The themes of participation and equal rights in decision-making runs through CEDAW, which refers to the right of women to participate in the political and public spheres, have access to and use of resources, inherit property, to participate in recreation, sports, and all aspects of cultural life, to participate in all community activities, and in decision-making in relation to marriage and family life.*

to public lobbying for the recognition of women and men's rights.

12. Access and control: Access and control refer to the opportunities and rights available to women and men to be able to have access to or have control over services, resources, and the distribution of benefits. In the context of an emergency, problems of access and control can have devastating consequences on those excluded and lead to heightened protection risks. Staff need to monitor closely who has access to and control of services that are established. If any excluded groups are identified, such as minority groups, or unaccompanied and separated children, staff will need to work with the community and aid workers to change any discriminatory patterns through empowerment and improved service delivery.

Actions

13. Obtain a good understanding of the operational context through a review of documents and reports on the social, cultural, economic and legal context, including the position of women and gender roles.

- Undertake initial participatory assessments with women, men, girls and boys of diverse backgrounds by engaging in informal discussions with as many different focus groups as possible.
- Find out who does what by sex and age, i.e. what activities do women and girls undertake and where? What activities do men and boys undertake and where? Who controls resources in the community? Who takes decisions?

Consider the specific needs of particular groups such as older persons living alone, persons with disabilities and child headed households and discuss with the community how they are being cared for and protected?

- Systematize the information to build a picture of the population profile,

those most at risk, the overall context, the roles assumed by women, girls, boys and men, and the background and diversity of the people of concern as well as the host population. Incorporate findings into the emergency programme and work with the programme officer to ensure these aspects are budgeted

- Identify relevant key actors such as local authorities (in particular Ministries for social welfare/services, family, gender, etc.), religious leaders, traditional leaders, teachers, political leaders, landowners, implementing and operational partners, or other important stakeholders and make sure that their opinions are reviewed with community members (women and men) and taken into consideration.
- Together with the community, identify and assess resources within the community, such as skills, equipment, tools or existing social projects and initiatives.
- Follow up with regular participatory assessments⁸ because in an emergency, the situation is often rapidly changing as people might move from one place to another, the security situation may change and new people can arrive etc. These changes are likely to affect the environment, the relation to the host population and the power balance within the refugee community.
- Keep a continual dialogue with women, men, girls and boys to build trust and confidence and to ensure active participation in planning, implementation and monitoring of service delivery.

⁸ In an emergency the participatory assessment might need to be slightly adjusted. If not all the steps within the tool can be used, parts can be used as a basis. Please see Chapter 5 for more information.

- Mobilize the community to form organizations and claim their rights by:
 - meeting with them regularly and making sure specific information campaigns are held for women and those who cannot leave their homes;
 - visiting schools and health centres to exchange information;
 - informing people of the assistance programmes;
 - informing people who will do what amongst the agencies;
 - informing people how their views have been reflected in any actions taken and then reviewing the effectiveness of the decisions taken; and
 - Supporting the development of appropriate community management structures, including mechanisms to ensure the meaningful participation of women, children and groups with specific needs.
- Discuss with the community the overall goals of the operation, as well as constraints based on finance, duration of support and personnel.
- Adapt activities to the time and availability of persons of concern.
- Keep a focus on the long-term sustainability and impact of the operation and provide protection and assistance with the aim of self-help and self-reliance.
- Coordinate with local authorities and host communities to set up a framework for peaceful partnership between the refugee/IDP community and the host population.
- Ensure coordination with other agencies to draw their focus to refugee hosted areas in order to support the host community to cope with the influx of refugees.

Support the re-establishment and/or development of refugee community-based structures which are representative of the population from an age, gender and diversity perspective and respect international legal standards

14. Every community has its own system and mechanisms to solve problems. In an emergency situation it is vital to seek to enhance and improve existing positive coping mechanisms which may include family relationships, mutual assistance among neighbours, local, social and economic organizations, community leaders, religious institutions and practices, traditional ceremonies, festivals and traditional healers.

15. Assistance should be channelled in a way that enhances already existing structures and mobilizes resources within the community. It is however important to recognize that existing structures and systems are not necessarily fair and do not always respect human rights, particularly women's rights and children's rights. The arrival of humanitarian assistance can exacerbate discriminatory practices like the exclusion of minority groups from accessing services, resources and decision-making processes and lead to heightened protection risks. It is therefore vital that community structures are analysed in this light and strengthened to ensure fair representation of the community and that they enable meaningful participation of women, adolescents and groups with specific needs.

Communities, culture, tradition and rights

The universality of human rights is often challenged by members of the community on the grounds that local culture and tradition should take precedence. Some UNHCR staff have resisted taking action to promote and protect, for example, the rights of women and girls on the grounds that it would interfere with local culture.

Cultural beliefs are not homogenous and cultures are not static; they are continually being renewed and reshaped.⁹ Cultural change is shaped by many factors, particularly conflict and displacement. Change also results from deliberate efforts to influence values through revisions of law or government policy.

International law provides that States are obliged to take measures to modify cultural patterns of conduct with the aim of eliminating customary and other practices that are based on the superiority or inferiority of either sex or on stereotyped roles for women and men.¹⁰ When a tradition or practice is considered by the relevant organ of the United Nations to be directly contrary to an international human rights instrument or standard, UNHCR staff will be guided by the applicable human rights instrument or standard.¹¹

Actions:

- Establish good relations with the community to understand the dynamics and social interactions in order to identify the support structures already existing in the community before and after displacement.

⁹ Adapted from *Addressing Cultural Relativism in Relation to Gender Equality and Women's Rights: An Approach by CIDA*, contained in *Gender Training Kit on Refugee Protection*, UNHCR, 2002, pp. 175–180.

¹⁰ CEDAW, Article 5; DEVAW, Article 4; General Comment No. 28, *Equality of rights between men and women* (Article 3), 2000, para. 5.

¹¹ For guidance see UNHCR, *Code of Conduct and Explanatory Notes, Core Values and Guiding Principles*, p. 4.

- Reactivate and support traditional community management structures and coping mechanisms if they respect human rights and are representative, if not, work with them to promote human rights.
- Support community members to set criteria for leadership and arrange for representatives to be selected by the community and respect principles of democracy.
- Coordinate with agencies on how to work with leaders representing the interests of the displaced community.
- Analyse, with the community, priorities for action and work with them in distributing roles and responsibilities.
- Monitor that women, adolescents girls and boys and groups with specific needs participate in decision making systems for the distribution of food, basic goods and registration.
- Ensure equal participation of women, men of all ages and backgrounds in sectors such as food, health, shelter, education, environment, water and sanitation.
- Ensure constant monitoring of how the assistance is being provided including distribution of food and NFIs (non food items) in order to identify abuse of power, corruption and discrimination.
- Support refugees own initiatives and the creation of cultural, social economic activities and/or religious centres and events. Involve the host population where appropriate.

Women's participation/ empowerment¹²

16. In most refugee and displacement contexts, the roles and responsibilities of men and women change because of the impact of conflict on family and community structures. For example, women may become the breadwinners and men could

¹² Part adapted from UNHCR *Handbook for Protection of Women and Girls*.

get involved in childcare. Displacement can be an empowering or disempowering experience for women. Every day, displaced women actively challenge their traditional gender roles that hinder their participation in the political, economic, and social realms. Displacement in an emergency generally has a higher number of women and children. The inclusion of women in community structures, camp management, economic life, and peace negotiations widens the range of choices available to women, provides them with discretion over their futures, and enhances the quality of their lives and those of their families and communities.

Participatory assessments and an analysis of the findings from a gender perspective are essential for gender mainstreaming. The power relations between women and men and how they impact on women's participation in decision-making, access and control of resources and physical security must be well understood. When violations of women's and girls' rights and inequalities between women and men are identified in an operation, UNHCR programmes must seek to address these through sustainable targeted action.

Key actions

- Ensure that structured dialogue includes a substantial number of displaced women and girls from the outset of the emergency to enable a holistic understanding of the problems.
- Have female staff with a community services background on the emergency team to ensure easy access to displaced women and girls.
- Analyse with women and girls the protection risks that they in particular face and ensure that the operational design considers these risks as well as the delivery of assistance to support them in carrying out their activities, such as sanitary materials, sufficient domestic items and support for dependents (cf

section on protection and on prevention of and response to sexual and gender-based violence [SGBV]).

- Work with partners to guarantee women's representation on all decision making structures such as shelter design and layout, NFIs, food and security.
- Ensure individual registration and documentation, including women in polygamous marriages.
- Together with women, decide who will receive the family ration cards.
- Provide female to female medical services so that women will not face barriers to accessing health support.
- Provide conditions/space and time for women's groups to meet, discuss common problems and advise collective strategies and share their experiences and ideas.
- Provide information and awareness to staff and people of concern on the UN Security Council Resolution 1325 on Women, Peace and Security.
- Implement brief sessions, including capacity development in leadership skills for women and on conflict resolution and peace building.
- Raise awareness and promote women's participation in peace negotiations and political governance.
- Promote men's participation in activities that reinforce women's empowerment.

Children's participation

17. Child participation is integral to a rights- and community-based approach. The core purpose of children's participation is to empower them as individuals and members of civil society, giving them the opportunity to influence the actions and decisions that affect their lives.¹³

¹³ This is the draft definition used by Save the Children Alliance as reproduced in *Save the Children Sweden, Creating an Enabling Environment: Capacity-building in children's participation, Save the Children Sweden, Vietnam, 2002–2004, pp. 15–16.*

18. The consequences of displacement and the loss of their normal social and cultural environment are devastating for children. Girls may be particularly affected as they are required to assume more adult responsibilities, including domestic chores and caring for younger children, and may not be able to go to school. Many girls suffer sexual exploitation and violence during flight. Further abuse often takes place in displacement for both girls and boys. Children who are unaccompanied and separated or children who are heads-of-households with younger siblings are at particular risk of social marginalization and isolation, and are often overlooked within conflict-affected populations.¹⁴ More information on children at risk is covered under groups and individuals with specific needs.

19. Therefore, ensuring the meaningful participation of girls and boys, in particular adolescent girls, in decisions and activities that affect their lives is essential. Participation will help children to have some structure to their lives, and will enable them to take action to improve their circumstances and their future. Participation also enhances their protection. As girls and boys are given the opportunity to express their views, in safety and in confidence, protection problems and solutions can be identified. Participation is also essential as it helps operations to address the problems faced by girls and boys, as well as build on their resources and capacities. Participation is also a right that can lead to the access and enjoyment of other fundamental rights, including the right to education. Children participate to different degrees; but the deeper the level of participation, the more children are able to influence what happens to them and the

greater the opportunity for personal development and empowerment.

Key actions:

- Be sensitive to gender, culture ethics and the power relations within the community between adults and children and between girls and boys.
- Set up informal focus groups with girls and boys to discuss their main concerns in the emergency and to understand how they are coping with the situation.
- Ensure a safe environment where they feel secure enough to discuss their needs.
- Explain the purpose of emergency support and seek their ideas on what should be done and how protection and assistance should be provided.
- Identify experts in child interviewing techniques to support/undertake focus group discussions and follow up actions.
- A sympathetic and imaginative approach to interviewing children is very important and best conducted by carefully trained refugees; if possible by someone the child already knows and trusts. If an interview has to take place through an interpreter, the interpreter must be well briefed, with his or her role limited to direct translation, and must not be allowed to break personal contact between interviewer and child. Children may react very differently. The presence of the child's friend(s) at the interview reassures the child but may also yield important information. Any accompanying adults or persons who brought the child forward should also be interviewed.
- Use simple language and creative activities to facilitate participation among children
- Provide feedback on how their concerns will be addressed.

¹⁴ See *Adolescent Girls Affected by Armed Conflict: Why Should we Care*, a fact sheet issued by the Gender and Peace Working Group of the Canadian Peace-building Coordination Unit and the Women's Commission for Refugee Women and Children.

Provide and support opportunities that are community-based to explore livelihoods for men and women with the purpose of gaining food security and earning incomes to meet other basic living standards.

20. Many individuals in the emergency context are pre-occupied with fulfilling the basic needs of their family members, including finding ways to re-establish their livelihoods even if they are displaced. The process of taking actions to explore livelihood opportunities will provide women and men an avenue to address psycho-social stresses and insecurities by identifying solutions to take control over their lives and gradually gain back their self-confidence. Therefore any initiatives aiming at re-establishing livelihoods should be supported by UNHCR or partners.

Key actions:

- Through focus group discussion with groups of men and women of different age groups, identify the various skills and capacities that they possess. Prepare a roster with names, skills, age and sex. This roster can include doctors, nurses, teachers, water engineers, public health workers, community workers and social workers, interpreters, water engineers, construction workers, other trades persons, administrators etc, so that NGOs and UN agencies can call upon the professionals and skilled persons to assist with the relief activities.
- Identify informal livelihood skills and capacities people may have and support those which the community consider feasible as well as identify local markets.
- Since women often play multiple roles, ensure that they are not overburdened with additional tasks linked to re-establishing livelihoods. However, if found relevant, do provide them opportunities through organizing group meetings to express their

fears and insecurities due to loss of livelihood and their plans to address them and ways in which UNHCR and other partners can support them in implementing these plans.

- Provide literacy training and conduct awareness raising workshops on the entitlements of the displaced persons and on their rights and responsibilities. This may be appropriate for women and adolescent boys and girls. Provide training on women's leadership skills that includes participation in decision-making in community structures, peace building and peace negotiations.
- Co-ordinate with colleagues and NGOs working on environment concerns to introduce fuel efficient stoves.
- Identify local organizations and women's groups and partner with them to support the possibilities with displaced communities to implement their plans for re-establishing their livelihoods so as to address gaps in their living standards.

Provide targeted community based services for groups with specific needs and ensure regular monitoring and follow up to identify protection risks and assistance gaps.

21. In every emergency there will be refugee groups or individuals facing heightened protection risks because of their specific needs, including individuals with trauma related problems. In stable situations, most communities respond to these needs through traditional community structures. Therefore it is important that assistance is community based, focusing on building the community's capacity to meet their needs and, if possible, within the care of their families or neighbours. In an emergency, groups or individuals with specific needs may be unintentionally ignored or excluded, leading to further problems. It is therefore vital to ensure that groups or individuals with specific

needs are not overlooked and/or discriminated and that protection and assistance are provided based on their concerns and needs. (see chapter 18 for information on survivors of SGBV).

Groups with Specific Needs

The following groups are generally considered to need more attention in an emergency than other members of the community, based on their specific needs. However, it is important to remember that this might not be the case for all persons within that group or that these may change according to the context and over time. Rather than targeting labelled groups of people with a standard package of assistance it is essential that an assessment is done to analyse the protection risks facing individuals or groups with specific needs to identify those at heightened risk and the nature of the assistance they are likely to need..

This list is not exhaustive and it is important to not limit the scope of assistance to only these groups, but to ensure that all persons with specific needs in a particular community receive appropriate protection and assistance according to their needs as expressed by themselves:

Girls and boys at risk

Child-headed household
Separated child
Unaccompanied child
Child associated with fighting forces
Victim/survivor of violence

Important medical/health condition

Serious medical condition – chronic illness
Psychosocial needs
Serious medical condition – other
Persons living with HIV/AIDS

Special legal or physical protection need

Survivor of torture/violence in asylum
At risk of deportation
Urgent need of physical protection
Minority group member
Other individual or group excluded or marginalized from the community

Women at risk

Woman associated with fighting forces
Female headed households
Victim/survivor of domestic violence/SGBV
Unaccompanied single woman

Older persons at risk

Older person as caretaker for separated children
Older person with grandchildren
Unaccompanied older person

Persons with disabilities

Physical disability
Mental disability

Other

Single parent
Person requiring family reunion

Key actions:

- Jointly with the community, arrange systematic identification of individuals and/or groups with specific needs.
- Identify those who require immediate attention, such as for example unaccompanied and separated children, sick or malnourished, unaccompanied persons with severe disabilities etc., and those with needs who require medium term follow up.
- Register persons with specific needs so that the operation plans adequately for their protection and assistance.
- Ensure that persons with urgent medical needs and chronic conditions are referred to the health centres for immediate treatment.
- Provide a “fast-track” queuing system for registration and distribution purposes for persons with specific needs, in particular in regards to older persons or persons with disabilities.
- Establish up-to-date records and confidential individual files and a simple periodic reporting system, focusing on the needs identified and services provided as well as statistical data.
- Jointly with the community, and those affected, agree on a system to provide

basic services to groups with specific needs and monitor delivery of services and implementation of follow-up actions.

- Ensure that groups or individuals with specific needs are able to access distribution points and are not neglected in the delivery of goods: if necessary arrange for separate queuing systems or arrange for goods to be delivered to persons not able to attend distribution gatherings. Monitor the distribution of goods to groups or individuals with specific needs so that to ensure that they are not being discriminated or taken advantage of.
- Monitor the construction of shelter, water and sanitation facilities to ensure that they are adapted to individuals with specific needs.
- Provide transport for individuals with physical disabilities, frail older persons, women in late pregnancy or persons in severe psychological distress to access medical and other services as appropriate. Ensure that the person of concern is accompanied by a responsible attendant (usually a relative) and that a clear meeting point has been identified to prevent separation from family members.
- Avoid unnecessary repetition of basic interviewing, which might jeopardize the confidentiality as well as be traumatic for the person of concern, by ensuring that case records are being transferred if individuals with specific needs are being moved.
- Identify and strengthen local institutions which have facilities for care and treatment, such as clinics, schools, hospitals and recreational facilities.
- Undertake participatory assessment with groups or individuals with specific needs and ensure that they are able to attend meetings or conduct home visits to gather their views and

incorporate them into operational planning.

- Provide incentive opportunities/training/employment/income-generating opportunities for those with specific needs or their families to facilitate support and longer term solutions.
- Assign tasks adapted to their disability and skills and personal situation.
- Undertake special measures to ensure that groups with specific needs are fully informed on protection and assistance measures and in particular distribution systems.
- Keep in mind that displaced persons most in need are often the least likely to come forward to make their needs known!

Women at risk

22. Different groups of women exposed to risk: Although not all women are at risk or exposed to protection problems, it is important to identify those women who are specifically at risk due to gender-related reasons. Protection problems include expulsion, refoolment and other security threats. Women may be survivors/victims of sexual and gender violence. Women torture survivors and those associated with fighting forces can also be at risk. Women could also experience different forms of exploitation like forced labour and face acute economic hardships or marginalization forcing them into engaging in risky behaviour, including survival sex. Groups or individual women could face discrimination and community hostility. Protection problems can become exacerbated based on family composition. Individual or groups of women at risk can be categorized either as single woman household, unaccompanied girls (please refer section 104 for unaccompanied and separated children), survivors of SGBV etc. Please refer to the chapter 18 on SGBV for planning and suggested actions in emergencies.

Key actions:

- Undertake focus group discussions with various groups of women to identify those single women who are at risk and require immediate responses and follow up with individual interviews to set up a case management system.
- Design and plan emergency responses that take into consideration the specific needs of those groups of women who are identified as “at risk”, so as to ensure emergency assistance is provided and followed up with discussions for agreeing on other short term action plans.
- Combine a variety of methods like follow-up visits, observations and individual discussions to monitor the targeted assistance and support and check if the protection impacts are positive and as intended on the individual or group of women who require these targeted actions.
- Organize community meetings to ensure that established community structures are taking responsibility for providing community protection and support to individual and groups of women at risk.
- Identify and partner with women’s groups and NGOs to support activities that undertake case work and draw up plans of action with individual women at risk.
- Ensure that women exposed to risk have opportunities to participate in any women’s group activities that are organized for information sharing and raising awareness on entitlements etc.
- Undertake brief awareness raising workshops with local NGO partner staff members and community leaders so that the concept of individual and groups of women at risk are understood and response actions are supported.

Unaccompanied and separated children

UNHCR defines a separated child as a child, separated from both parents, or previous legal or customary primary care-giver, but not necessarily from other relatives. (it may therefore include children accompanied by other adult family members.)

An unaccompanied child is defined as a child, separated from both parents and other relatives and is not being cared for by an adult who, by law or custom, is responsible for doing so.

Orphans are defined as children, both of whose parents are known to be dead. In some countries, however, a child who has lost one parent is called an orphan.¹

23. Children separated from their immediate next-of-kin during an emergency are often cared for by the displaced community, frequently within an extended family. It is only where children cannot be cared for by the community that special measures will be required for their care, but the situation of all unaccompanied and separated children should be monitored. Although the government of the country of asylum should take legal responsibility for these children, in practice if government resources are thinly stretched, UNHCR may have to take a more pro-active role.

24. The failure to protect family unity not only results in physical and emotional suffering, but subsequent efforts to reunite families are costly and difficult, and delays in family reunification will impede durable solutions. Continuity of existing care arrangements will help avoid further disruption and may facilitate reunion. Siblings should be kept together, as should unrelated children who have been living together and give each other emotional support.

¹⁵ *These definitions have been endorsed by the following agencies: International Committee of the Red Cross, the International Rescue Committee, Save the Children UK, UNHCR, UNICEF and World Vision International.*

25. There is sometimes pressure to rescue children from dangerous situations but some child-only evacuations have caused years of separation and in some cases the breaks have been permanent. The physical dangers may be over estimated, while the children's psychological need to be with their parents may be under appreciated.

26. An assessment must be conducted to establish the extent of family separation and the situation of affected children. This should be carried out at the earliest possible stage of any emergency as part of a broader situation analysis in order to develop an appropriate response.¹⁶

27. Whenever possible, children should be placed with families and not be subject to institutional care. Ideally, they should be cared for by relatives or others from the same ethnic or cultural groups.¹⁷ An unaccompanied child must be placed in a family where bonding can continue until the parent(s) or previous legal or customary primary care-giver is found. The child will then need time to re-establish a bond with his or her parent(s) or the previous legal or customary primary care-giver(s). A period of overlap with the two families may therefore be necessary, in order to permit the re-establishment of the relationship with the parents while avoiding an abrupt severance of the ties with the foster family. Where years have elapsed, the child's interests may be better served by remaining with the foster family. However, a formal individual Best Interests Determination is required to determine the best durable solution for the child (see below and UNHCR guidelines on Formal Determination of the Best Interest of the Child, 2006).

¹⁶ Please see page 30-32, *Tracing and Family Reunification in the Inter-Agency Guiding Principles on Unaccompanied and Separated Children*.

¹⁷ Please see page 42-51, *Care Arrangements in the Inter-Agency Guiding Principles on Unaccompanied and Separate Children*.

28. Criteria for foster family care should be worked out together with the community. Foster care arrangements should be formalized as quickly as possible by signed agreements, with an understanding that if the child's own family is traced, reunification is to go ahead.¹⁸ The child should continue to have registration and ration documents separate from those of the foster family. Foster care arrangements should be monitored closely and regularly through outreach activities in the community and careful account should be taken of cultural attitudes towards fostering. Monitoring should also include the care arrangements of separated children, who are living with adult family members/relatives to ensure that children in foster care are not subject to exploitation, abuse, neglect or denial of other rights. While payment of individual foster families should be avoided, programmes should focus, in the context of wider community-based activities, on enhancing the ability of families to support the children in their care. Fostering of refugee children by families of the host country should be discouraged, as this puts these children at additional risk of abuse and exploitation and their situation is difficult to monitor.

Best Interest Determination

29. The use of Best Interests Determination (BID) is a means to ensure that specific protection and assistance is provided to children who are or may become deprived of the protection of their family. It is a necessary tool to ensure that all factors and rights under international law are taken into account when making a decision that has a fundamental impact on the child. The formal and documented proc-

¹⁸ While family reunification should be a priority, the decision to return a child to the country of origin for family reunification should be based on the best interest of the child. Family reunification should be balanced with, for example, the conditions in the country of origin, conditions in the country of asylum, the wishes of the parents and those of the child.

ess enables UNHCR staff and partners to ensure that decisions are in line with the provisions and the spirit of the Convention on the Rights of the Child and other relevant international instruments and are set within a human rights framework. It ensures that such decisions take due account of the fundamental right to life, survival and development of the child to the maximum extent possible.

30. A determination of what is in the best interests of the child will have a fundamental and often long-term impact on the child. It requires a clear and comprehensive assessment of the child's background, particular specific needs and protection risks, while analysing this from an age, gender and diversity perspective, thus making it essential that suitably qualified personnel are involved in gathering information and determining the best interests of the child. A report and an assessment made by a specialist on protection, community services, or child welfare, to a multi-disciplinary panel capable of considering each child on a case-by-case basis, is the most appropriate mechanism for undertaking a BID.

Key actions:

- The description “unaccompanied children”, or “separated children”, should always be used in place of “orphans” in particular since the status of these children is rarely immediately clear in an emergency. Labelling children as orphans tends to encourage adoptions, (and in some cases, there may be enormous external pressure for orphanages and/or third country adoption) rather than focusing on family tracing, foster placements and increasing community support.
- Make a rapid assessment of the situation of unaccompanied and separated children, girls and boys, among the refugee population. Priority should be given to children under five years, child headed households and boys

and girls at risk of (sexual) abuse, exploitation or military recruitment.

- Agree with the community on mechanisms to identify unaccompanied and separated children and who the children should be referred to for registration.
- Once identified, unaccompanied and separated children should be individually registered as soon as possible (see Annex 2 for the inter-agency registration form for unaccompanied and separated children).
- Ensure that unaccompanied and separated children are issued with separate registration documents and ration cards and that these documents (including a recent photograph), always travel with the child. These measures will avoid confusion if a fostering arrangement breaks down.
- As soon as unaccompanied and separated children are identified, start to trace their parents or families. Family tracing is not considered exhausted before a two year investigation has been completed. All claims for reunification must be verified, as mistakes and false claims sometimes occur.¹⁹
- Do not undertake evacuations which separate children from their parents or others recognized as primary care-takers (custody) unless essential to protect life and after careful determination that protection and assistance cannot be provided in place and that evacuation of the entire family is not feasible.
- If an evacuation is essential, the following safeguards should be observed:
 - Children should be accompanied by an adult relative, and if this is not possible, by a qualified caregiver known to the children, such as their teachers.

¹⁹ Please see page 47-39, *Verification and Family Reunification in the Inter-Agency Guiding Principles on Unaccompanied and Separated Children*.

- The children’s identities must be fully documented before departure. Whenever possible, documentation should travel with the children, and caregivers should be waiting at the destination. The evacuation must be co-ordinated with the designated lead agency.
- If the children are moved across an international border, written agreements with the government should be secured in advance in order to ensure family visits and reunions are possible.²⁰
- Interim care must be provided to children who are unaccompanied or separated and where possible this should be in families within the child’s own community, with close monitoring. The opinion of the child regarding the care arrangement should be taken into consideration.
- Where institutional care is necessary,²¹ it should be small, decentralized within the community, and integrated into community activities.
- Unaccompanied and separated children should be integrated into the life, activities and services available to other children to ensure that they are not marginalized.
- Ensure continuity and stability in care (foster families and other) by employing refugee and national community services staff who are less likely to move on than international staff.
- Provide supervision, support and training to child care workers, including child interviewing techniques, child development, community mobilization and child trauma. Train refugees and aid workers to identify and register unaccompanied and separated children, girls and boys, from the outset of an emergency.
- Stigmatization needs to be avoided and the social integration of children orphaned by war, HIV/AIDS or other misfortune should be facilitated.
- Ensure that the BID is child-centered, gender sensitive and guarantees the child’s participation.
- While conducting a BID take into account the views of the child and of persons close to the child and gather information on:
 - Key personal data of the child
 - History prior to separation
 - History of separation and flight itself
 - History after flight and current situation
 - The child’s age and maturity
- Identify follow-up measures to address protection gaps as identified jointly with the child and person(s) close to the child and have a BID panel make a decision on the best interests of the child based on the report and assessment of a BID specialist.

Child headed households:

- Analyse the protection risks and assistance requirements of child-headed households with the affected persons and develop specific assistance packages accordingly.
- Pay particular attention to the shelter requirements of child-headed households and ensure that they are placed in locations where they will obtain the support and “monitoring” of responsible community members.
- Assistance to children who are heads of households should be integrated in any given community with overall as-

²⁰ *The InterAgency Guiding Principles on Unaccompanied and Separated Children (page 24-26) provides some useful guidance in addition to the points mentioned here, e.g. children should be given the opportunity to express their opinion, which should be taken into consideration; agencies or individuals should evacuate children only as part of a coordinated plan of action; informed consent of the parents.*

²¹ *Institutionalization should be seen as a last resort even during emergencies.*

sistance to children in need of special protection.

- Monitor the delivery of all services to child-headed households and be aware of any potential for exploitation and abuse as this particular group is easily exposed to such protection risks.
- Provide child-headed households information on the services that are available to them and evaluate the delivery of assistance with them.

Family tracing and reunification

31. Tracing and reunion of separated family members is a priority action in emergencies and should be organized as quickly as possible, using all possible means in coordination with other agencies. Where possible, facilitate mailing services for refugees and IDPs to support tracing and reunification.

Key actions:

- Procedures for the reunion of refugee family members separated during flight or within the country of asylum should be agreed with the authorities and partners, in particular ICRC and implemented as soon as practicable.
- Tracing programmes should be set up and co-ordinated in the country of asylum, country of origin and regionally. At camp or local level, simple and effective tracing mechanisms include posting lists of names with photographs on the community notice boards in different locations, using the radio, or even making announcements by megaphone.
- The tracing arrangements must be widely promulgated; a central contact point in each site is likely to be needed. Tracing is a delicate task, and has to be organized by people who have the necessary experience and skills. A suitably experienced agency may be needed to implement these activities.
- Tracing requires the involvement of

the refugees themselves, who will play a key role. The local population and authorities also play an important role.

- Confidentiality of information and protection of individuals is essential.
- Consider the causes of separation when establishing tracing systems. Separation may have been caused by large scale population movements but may also have been due to other factors such as children opting to leave their families, or placement of persons outside their family for survival purposes. Outsiders, often relief workers, may have removed a child from an apparently dangerous situation, without informing the family and without proper documentation.
- Combine a variety of systems: on the spot tracing, use of community mechanisms and formalized tracing at a regional level.
- Coordinate activities with agencies having expertise, e.g. the ICRC. Note that ICRC procedures, using the national Red Cross or Red Crescent societies, can be lengthy but may be the most appropriate for difficult cases.
- Ensure regional standardization of registration systems.
- Agree upon a communication network in the community, including a mailing system. A properly organized exchange of news (Red Cross messages) may considerably diminish the workload of a tracing service and accelerate the reunion of family members. Refugees have the right to send and receive mail.

Older persons

32. The UNHCR policy on older persons stresses the importance to see older refugees as active and contributing members in the community and emphasizes that older refugees have valuable resources and skills and can provide guidance and

advice in the actual displacement context as well as in the rebuilding of community structures.

Unaccompanied older persons

33. Unaccompanied older persons have particular challenges in emergency situations such as finding adequate accommodation. The standard issue of one tent per five persons may lead to them having to share with strangers, as well as being unable to protect their belongings while struggling to collect water, rations and fuel. Older persons risk being neglected in NFI distribution because they might not be able to attend the distribution or might need assistance in carrying the distributed items back to their shelter.

Grandparent headed households

34. In normal situations, older persons are often taken care of by their children. In emergency refugee situations family members might have become separated or have died, leaving older persons without their traditional family support mechanisms. In addition, in the absence of the parents, many older persons become the main care givers for their grandchildren. Without being able to fend for themselves, older persons risk becoming dependent on their grandchildren for the collection of fuel, water, food and economic activities.

Key actions:

- Undertake participatory assessment with older women and men to learn about their protection risks and concerns, as well as to seek their advice on solutions and traditional community practices for resolving problems.
- Design the emergency response taking into consideration the specific needs of older persons requiring additional support in areas such as:
- Shelter - ensure that the entrance to the shelter is high enough so that people do not have to bend to get in and out of the shelter.

- Food - consideration should be given to include undernourished older persons in the supplementary feeding programmes and the food basket should include items that older persons can consume/eat/chew easily. Arrange with WFP to provide grinding machines to ease access to ground soft cereal food.
- Water and fuel - limited mobility may preclude collection of water or fuel essential for food preparation and other basic needs.
- NFIs – ensure appropriate distribution, such as the number of blankets taking into account their age and health requirements.
- Set up a community-based distribution system involving neighbours and family members for provision of food, water, fuel and NFIs to older persons.
- Identify neighbours, relatives or others who can assist with food, water or fuel collection for grandparent headed household to allow children to be released from chores so that they can attend school.
- Find creative ways of including older persons in activities such as advisory groups on issues regarding the community, awareness raising groups for issues concerning adolescents and children and build on skills such as, for example, skills in traditional birth attendance.
- Regularly visit grandparent-headed households to monitor their welfare and provide support.

Persons with physical and mental disabilities

35. Initial care for women, men, girls and boys with disabilities should be through families and the community, whereas rehabilitation service such as wheel chair, crutches etc, should be introduced as soon as possible. The participation of persons with disabilities through participatory as-

assessments is essential because it will lead to better protection, as well as raising their self-esteem and help to reduce isolation. It is also important to note that persons with disabilities are at risk of sexual exploitation and violence and their protection situation should be regularly analysed with them through home visits and focus group discussions.

Key actions:

- Adapt the time and place for participatory assessments so that persons with disabilities are able to attend or visit them at home.
- Review how the community traditionally cares for persons with disabilities and ensure that these respect human rights standards.
- Adapt distribution systems so that persons with disabilities are able to access basic goods and work with the community leaders to arrange for “home delivery” of all items.
- In coordination with the community, appoint caregivers for persons with disabilities from among family and neighbours.
- Work with persons with physical and mental disabilities and their caregivers to ensure their specific needs are taken into account in sectors such as site planning, health, shelter construction, water, sanitation and education, as well as in defining nutritional needs, and food and NFI distribution. Coordinate with health institutions and organizations to include IDPs or refugees with disabilities into programmes of the host country.

Psychosocial needs

36. Most societies have some form of coping mechanisms for mental health conditions and an interpretation of what trauma is and ways of responding. In some societies healing is seen as a collective process promoted by the conduct of spiritual and religious practices. These beliefs shape

people’s behaviour and well-being and need to be taken into consideration²² when building an appropriate response which supports communities to respond to psychosocial needs.

Key actions:

- Identify and analyse with the community, both women and men, the traditional forms of coping with trauma and who are the key actors in these processes.
- Explore whether the community based mechanisms respect human rights, particularly in relation to women and girls.
- Work with the main community actors to see how support can be provided to community-based mechanisms which respect human rights.
- Advocate for and integrate appropriate community-based psychosocial support in the emergency preparedness and contingency planning.
- Include and support traditional healers and/or religious leaders in psychosocial assistance programmes if appropriate.
- Provide appropriate psychological, social, economic, educational and medical support to survivors of rights violations and encourage active participation of the survivor in family and community activities.
- Encourage the re-establishment of normal cultural and religious events, as well as other activities, in order to support social networks.
- Promote the establishment of child-friendly spaces (which provide among others, recreational activities, psychosocial support, information on issues like hygiene, HIV/AIDS, and child rights, and access to trusted adults) and establish education systems as soon as possible even if in

²² Janaka Jayawickrama and Eileen Brady *Trauma and Psychosocial Assessment in Western Darfur, Sudan, 2005.*

makeshift conditions. This will help in restoring some kind of normalcy and providing a daily routine and structure.

- Involve adults and adolescents in concrete, purposeful, common interest activities (e.g., constructing/organizing shelter, organizing family tracing, distribution of food, teaching children etc).

Establish an effective community services system for community-based activities

37. The purpose of adopting a community-based approach is to ensure that the emergency protection and assistance response is effective and to ensure sustainability of the programme through participation of the concerned community members from the initial stages. The participation of the host government, refugee/IDP communities and host population will create a sense of ownership of initiatives undertaken jointly and will help in handing over the responsibility of managing the programmes when the emergency phase is over.

38. The implementation of a community-based approach and ensuring adequate protection of groups with specific needs requires the establishment of an effectively trained and managed community services team. This team will comprise of both international and national staff, as well as support outreach workers from the host and displaced community. During the emergency phase, deployed community services staff will play a key role in setting up this system with national government partners, as well as national and international non-government partners. By the end of the initial emergency phase it is important that a Community Services Action Plan has been established to enable a smooth handover.

Key actions:

- Identify national government structures which can provide staff and support to the community services strategy and avoid setting up parallel structures where local and national facilities already exist.
- If possible, make an agreement with the national government structure to provide resources to support the implementation of community-based services.
- Identify all local and international non-government organizations with expertise in community-based services already working in the area and learn from their experiences.
- Together with these existing structures, assess community services staffing and resource needs, including the services of interpreters.
- Ensure the recruitment of local staff with knowledge of the culture and language of the community.
- Monitor the security of national staff to avoid harm while dealing with sensitive situations.
- Assess training needs of all staff and implement briefings on main issues until there is more time for more in-depth training. Prioritize training in:
 - CBA, including participatory assessment for the establishment of systems for identification;
 - registration and monitoring of those with specific needs;
 - prevention and response to SGBV;
 - Code of Conduct training; and
 - gender issues and people oriented planning.
- Ensure that all community services staff signs the Code of Conduct and the confidentiality agreement.
- Based on the findings of the initial participatory assessment, work with the team and community members to establish a Community Services Plan

of Action share it with all members of the multifunctional team.

- Work with local authorities on the recruitment of staff from the host community to reduce any potential for tension while taking into consideration local politics, security issues and other factors particular to the context.
- As much as possible, support local and national structures to include refugees and persons of concern as interpreters and outreach workers and in the provision of services. If interpreters are selected from the refugee or host population ensure balancing selection by age, gender and diversity and monitor them closely to ensure their security in sensitive situations.
- In all community services staffing structures ensure a gender balance is maintained and promote the same policy with all humanitarian workers, in particular UNHCR implementing partners.
- Build the capacity of the community by identifying training needs and by helping to organize practical and hands-on training in community work.
- Based on joint assessments with the refugee community, support the establishment of refugee or IDP community outreach teams, including persons from the host population, both men and women. Jointly with the community select community outreach workers based on their previous skills, including women and men and youth.
- Jointly with the community provide terms of reference for the community outreach team including tasks such as:
 - identifying resources, protection risks and needs;
 - collecting and disseminating information;
 - assisting in documentation and registration with a focus on groups with specific needs;
 - referring persons to units within UNHCR and/or its implementing or operational partners; and
 - establishment of community-based services and monitoring to support groups with specific needs.
- Train refugee community workers and draw on their own knowledge of their community, and make use of outside expertise (from within the host country if possible). Over time training should cover community outreach techniques, a community-based approach, gender awareness, children's rights, and include inputs from other disciplines such as public health, reproductive health, HIV and AIDS, nutrition, sanitation, protection, water and environment.
- Monitor the performance of the community outreach workers to ensure impartial assistance and confidentiality and evaluate their performance with the diverse groups among the community, as well as the work of the community services team as a whole.
- Coordinate with authorities of the host country for them to include refugees and IDPs in their programmes.
- As far as possible ensure continuity of staff in order to strengthen the relationship between UNHCR and the refugee/ IDP community.

Situation

Suitable, well-selected sites and soundly planned refugee settlements with adequate shelter and integrated, appropriate infrastructure are essential from the early stages of a refugee emergency as they are life-saving and alleviate hardship. Accommodating refugees in emergencies may take the form of host families/communities, mass accommodation in existing shelters or organized camps. Initial decisions on the location of the camp should involve the host government as well as local authorities and communities. Likewise, layout should involve refugees. This approach is necessary to avoid long-term protection issues such as conflict with local communities and to ensure a safe environment for the refugees and the delivery of humanitarian assistance.

Objectives

To provide suitable sites and shelter, in order to accommodate refugees in emergencies.

Principles of response

- In addition to meeting the immediate needs, planning should take into consideration the long-term provision of services even if the situation is expected to be temporary.
- Decisions on site selection and camp planning are very difficult to reverse, therefore seek technical support.
- Avoid high population density congestion in settlements and in accommodation;

- Avoid very large settlements; refugee camps should normally be considered as the last option.
- Involve refugees in all phases of settlement layout and shelter design and construction.
- Use a bottom-up planning approach, beginning with the smallest social units, preserving traditional social arrangements and structures as far as possible.
- Develop a comprehensive master plan with a layout based on open community forms and community services, such as water points, latrines, showers, cloth washing facilities and garbage collection to promote ownership and maintenance of the services.

Action

- Identify the most suitable option or combination of options for accommodating the refugees.
- In the case of planned camps, assess the suitability of the refugee site and ensure that it meets the basic criteria.
- Provide suitable shelter.
- Simultaneously assess the most immediate needs for emergency shelter and provide the necessary materials that cannot be met from locally available resources.
- In the case of spontaneous settlement, identify the most urgently required measures to improve site planning and layout, and implement these as soon as possible.

1. Aside from a life-saving measure, having a place to live is a basic human right and this should be upheld by providing shelter and a friendly environment. The layout, infrastructure and shelter of a camp will have a major influence on the safety and well-being of refugees. Therefore, other vital sectors such as water (good quality, quantity and ease of access), sanitation, administration and security, food distribution, health, education, community services, and income-generating activities should be taken into consideration during the humanitarian response.

2. Most refugee operations last much longer than initially anticipated, therefore, site selection, camp planning and provision of assistance should take this into consideration as well as bearing in mind the exit strategy from the start.

3. The role and responsibility of the local and national authorities in site selection is of fundamental importance. Equally, the refugees themselves must be involved as early as possible. Ideally, the needs and human rights of the refugees should determine the size and layout of the site. In practice, a compromise has to be made when considering all of the relevant elements.

4. good site selection, planning and shelter will:

- i. uphold UNHCR's protection mandate;
- ii. minimize the need for difficult, corrective measures later;
- iii. make the provision of services easier and more cost-effective; and
- iv. ensure most efficient use of land, resources and time.

5. Emergency refugee settlements generally fall into one of three categories:

- i. dispersed settlement/host families;
- ii. mass shelter; and
- iii. camps: (a) spontaneous and (b) planned.

Dispersed settlement/host families

6. This type of arrangement is where the refugees find accommodation within the households of families who already live in the area of refuge. The refugees either share existing accommodation or set up temporary accommodation nearby and share water, sanitation, cooking and other services of the pre-existing households.

7. Accommodation is often found with extended family members or with people of the same ethnic background. This type of arrangement may occur in rural or urban settings. The advantages of this type of settlement are:

- i. quick implementation;
- ii. limited administrative support is needed;
- iii. low cost;
- iv. fosters self help and independence; and
- v. it has less impact on the local environment than camps.

8. The disadvantages of this type of settlement are:

- i. the host families and communities can become overburdened and impoverished;
- ii. it can be difficult to distinguish the host population from the refugees and this may pose problems where population estimation and registration are required;
- iii. protection, nutrition and health problems may not be as easy to detect as when the population is more concentrated; and
- iv. shelter and other forms of assistance are likely to be needed by the host population as well as the refugees.

9. In order to alleviate some of these disadvantages the host communities can be supported through Quick Impact Projects (QIPs) where increasing needs of the community could be met through UNHCR assistance.

Mass shelter: public buildings and community facilities

10. This type of settlement is where refugees are accommodated in pre-existing facilities, for example, in schools, barracks, hotels, gymnasiums or warehouses. These are normally in urban areas and are often intended as temporary or transit accommodation. The advantages of this type of settlement are:

- i. they are not continuously inhabited during normal use and refugees can be accommodated immediately without disrupting accommodation in the hosting area;
- ii. services such as water and sanitation are immediately available, though these may be inadequate if the numbers are large; and
- iii. the need to construct additional structures specifically for the refugees is avoided.

11. The disadvantages of this type of settlement are:

- i. they can quickly become overcrowded;
- ii. sanitation and other services can become overburdened;
- iii. equipment and structure can be damaged;
- iv. buildings are no longer available for their original purpose, thus disrupting public services to the hosting population (e.g. schools should be evacuated as early as possible); and
- v. lack of privacy and increased protection risks.

Camps

Spontaneous camps

12. This type of camp is formed without adequate planning in order to meet immediate needs. Aside from creating a unfriendly environment, the provision of services may become cumbersome and costly.

Spontaneous camps should be avoided to the extent possible.

13. Generally, spontaneous camps have more disadvantages than advantages, for example:

- i. re-designing the camp would be necessary (where resources are available); and
- ii. re-location, as early as possible, to a well-identified site; especially if there is conflict with local community.

14. High density camps with very large populations are the worst possible option for refugee accommodation and an intolerable strain on local services. However, this may be the only option because of decisions by the host country or simply because of a lack of sufficient land.

Planned camps

15. This type of settlement is where refugees are accommodated in purpose-built sites where a full range of services, within possible means, are provided.

16. The advantages of this type of settlement are:

- i. services can be provided to a large population in a centralized and efficient way;
- ii. there may be economies of scale in the provision of some services compared with more dispersed settlements;
- iii. the refugee population can be easy to identify and communicate with; and
- iv. voluntary repatriation can be easier to organize.

17. The disadvantages of this type of settlement are:

- i. high population seriously increases health risks;
- ii. high risk of environmental damage in the immediate vicinity of the camp;
- iii. high population concentrations and proximity to international borders

- may expose the refugees to protection problems; and
- iv. large camps may provide a hiding place and support base for persons other than refugees. It may be difficult to distinguish these people from the normal refugee population and thus they may continue to benefit from assistance.

Organization of response

- ◆ Site selection, planning and shelter have a major bearing on the provision of other assistance.
- ◆ This subject must therefore be considered as essential to the needs and resource assessment and response.
- ◆ Expertize and swift coordinated planning are necessary for a new site or the improvement of existing conditions.

Introduction

18. Site selection, planning and the provision of shelter have a direct bearing on the provision of other assistance. These will be important considerations in the overall needs assessment and planning of response. Decisions must be made using an integrated approach, incorporating both the advice of specialists and the views of the refugees.

Contingency planning

19. Ideally, sites should be selected and planned prior to the arrival of the refugees. However, an unoccupied, developed site may send the wrong signal and encourage people to cross the border.

20. Frequently, the scale, nature, timing or direction of movement of the refugee flow will mean that some or all aspects of a contingency plan may need to be modified in the face of changing or unforeseen events. However, the information previously gathered in the contingency planning process will usually be useful.

Information for site selection and planning

21. The contingency plan and information already available, combined with visual and technical evaluation, should assist in the selection of the most suitable site. Information that is essential for site selection and planning will often be in the form of maps, reports, surveys and other data as reflected in the table in annex “Sites criteria”.

It should be noted that each criteria should be reviewed and commented on in relation to the minimum standards (please see Key Indicators, Toolbox, Table 1) rather than using a grading system which would become misleading.

22. Sources of information for site selection and planning should include local authorities and communities, government offices, educational institutions and UN agencies. UNHCR Headquarters, through the focal point on Geographical Information Systems (GIS), can also support operations with maps, aerial photographs, satellite images and a special geographic database. Furthermore, the Technical Support Section (TSS) at Headquarters, upon request, could assist in the process of site selection and planning.

Expertize and personnel

23. Expertize may be required in the fields of hydrology, surveying, physical planning, engineering (e.g. water supply, environmental sanitation, road and bridge construction, building materials, etc.), public health, the environment and perhaps social anthropology. Familiarity with conditions in both the country of origin and of asylum is very important. Prior emergency experience and a flexible approach are particularly valuable.

24. Expertize and advice should be sought through UNHCR’s Technical Support Section (TSS), who will advise on the fielding of a specialist to coordinate activities in this sector. Potential sources

of the necessary expertise are government line ministries, national and international NGOs, engineering faculties, local industry and professional organizations, as well as other UN organizations.

25. Site selection and settlement planning require broad consultations with all concerned in the planning, development and use of the site. When appropriate, multi-sector planning teams, work-groups or task-forces might be formed to better structure consultations and better solicit inputs. Consensus should be sought, though it is rare that the needs of all the parties will be fully satisfied.

Criteria for site selection

- ♦ Land may be scarce in the country of asylum and no site may be available that meets all of the desired criteria. If, however, the site does not meet the basic characteristics as mentioned in annex “Sites criteria” and is clearly unsuitable, every effort must be made to convince the host Government regarding another location. The problems associated with an unsuitable site would be enormous in terms of protection and financial implications, which would escalate over time.

Introduction

26. The social and cultural background of the refugees are important determinants in site selection, physical planning and shelter. In many circumstances, however, options will be limited and land that meets even minimum standards may be scarce. It is therefore wise to put on record the short-comings of the site and the rationale for its selection.

Water supply

27. A specialists’ assessment of water availability should be a prerequisite in selecting a site.

The availability of an adequate amount of water on a year-round basis has proved in practice to be the single most important criterion, and commonly the most problematic.

A site should not be selected on the assumption that water can be found merely by drilling, digging, or trucking. Drilling may not be feasible or may not provide water in an adequate quantity and quality. No site should be selected where the trucking of water will be required over a long period.

Size of camp sites

28. While there are recommended minimum area requirements for refugee sites, these should be applied cautiously and with flexibility. They are a rule of thumb for an initial calculation rather than precise standards.

Ideally, the recommended minimum surface area is 45 m² per person when planning a refugee camp (including kitchen/vegetable gardening space). However, the actual surface area per person (excluding garden space) should not be less than 30 m² per person.

The bare minimum figure of 30 m² surface area per person includes the area necessary for roads, foot paths, educational facilities, sanitation, security, firebreaks, administration, water storage, distribution, markets, relief item storage and, of course, plots for shelter. The figure of 30 m² does not include, however, any land for significant agricultural activities or livestock. Although agricultural activities are not usually a priority during emergencies, small vegetable gardens (kitchen gardening) attached to the family plot should be included in the site plan from the outset. This requires a minimum increase of 15 m² per person, hence, a minimum of 45 m² overall land allocation per person would be needed.

29. Large camps of over 20,000 people should generally be avoided. The size of a site for 20,000 people should be calculated as follows, assuming space for vegetable gardens is included:

$20,000 \text{ people} \times 45 \text{ m}^2 = 900,000 \text{ m}^2 = 90 \text{ hectares}$ (for example, a site measuring 900 m x 1000 m).

30. If possible, there should be a substantial distance between each camp. The distance depends on a number of factors: access, proximity of the local population, water supplies, environmental considerations and land use and rights.

31. Refugee settlements should have potential for expansion to accommodate increase in the population due to natural increases or new arrivals. The excess of births over deaths means that the population could grow as fast as 3 to 4% per year.

Land use and land rights

32. In most countries land for the establishment of refugee camps is scarce. Often, sites are provided on public land by the government. Any use of private land must be based on formal legal arrangements through the Government and in accordance with the laws of the country.

Note that UNHCR neither purchases nor rents land for refugee settlements.

Headquarters should be consulted at once if there is a problem with land use and/or land rights.

33. Once a possible site has been identified, the process of site assessment for eventual selection should always include clarification of land-ownership and land rights. Almost invariably, land rights or ownership are known, even though these may not be well documented in public records, or may not be obvious. Nomadic use of range-land, for instance, requires huge areas and may not appear used.

34. The refugees should have the exclusive use of the site through agreement with national and local (including traditional) authorities. Traditional or customary land-use rights are very sensitive issues, and even if there may be an agreement with the national government to use a site, local groups may disagree with the site being used, even temporarily. Clarification of access rights and land-use restrictions are also necessary to define the rights of the refugees to:

- i. collect fuel-wood, and timber for shelter construction as well as fodder for animals;
- ii. graze their animals; and
- iii. engage in agriculture or other subsistence activities.

Security and protection

35. In principle, the granting of asylum is not an unfriendly act by the host country towards the country of origin. However, to ensure the security and protection of the refugees, it is recommended that they be settled at a reasonable distance from international borders as well as other potentially sensitive areas such as military installations.

The Organization of African Unity Refugee Convention (OAU Convention) states: "For reasons of security, countries of asylum shall, as far as possible, settle refugees at a reasonable distance from the frontier of their country of origin".¹

Exceptions should only be made to this rule where the interests of the refugees would be better served. For example, if there are good prospects for early voluntary repatriation and security and protection considerations are favourable.

¹ Article II, paragraph 6 OAU Convention.

Topography, drainage and soil conditions

36. Where water is readily available, drainage often becomes a key criterion. The whole site should be located above flood prone areas, preferably on gentle (2 to 4%) slopes. Sites on slopes steeper than 10% gradient are difficult to use and usually require complex and costly site preparations. Flat sites present serious problems for the drainage of waste and storm water. Avoid areas likely to become marshy or waterlogged during the rainy season.

37. Soils that allow swift surface water absorption are important for the construction and effectiveness of pit latrines. The subsoil should permit good infiltration (i.e. allowing water absorption by the soil, and the retention of solid waste in the latrine). It should be noted that very sandy soils which are good for infiltration are sometimes poor for the stability of the pit. Where drinking water supplies are drawn from ground water sources, special attention must be given to preventing contamination by pit latrines. The pit latrines must not reach into the ground water. The groundwater table should be a minimum of 3 m below the surface of the site.

38. Avoid excessively rocky or impermeable sites as they hamper both shelter and latrine construction. If possible, select a site where the land is suitable for at least vegetable gardens and/or small-scale agriculture.

Accessibility

39. The site must be accessible and close to sources of necessary supplies such as food, cooking fuel and shelter material. Proximity to national services is desirable, particularly health care services. Roads must be “all-weather” and provide year-round access. Short access roads to connect the main road with the site can be constructed as part of the camp development. There may be advantages in choosing a site near a town, subject to consid-

eration of possible friction between local inhabitants and refugees.

Climatic conditions, local health and other risks

40. Settlement areas should be free of major environmental health hazards such as malaria, onchocerciasis (river blindness), schistosomiasis (bilharzia) or tsetse fly. A site may have unseen and/or irregular (but often locally known) risks such as flash flooding, or serious industrial pollution. For sites in dust-prone areas, regular dust clouds can foster respiratory diseases. Emergency and temporary shelter need protection from high winds. However, a daily breeze is an advantage. Climatic conditions should be suitable year-round and careful account should be taken of seasonal variations. For example, a suitable site in the dry season may be untenable in the rains. Likewise, mountainous areas may be suitable in summer, while in winter the temperatures may fall significantly below freezing. Seasonal variation can have a considerable impact on the type and cost of shelter, infrastructure, heating fuel and even diet. As far as possible, refugees should not be settled in an area where the climate differs greatly from that to which they are accustomed. For example, settling refugees from malaria-free high ground to a marshy area where the disease is endemic can be disastrous.

Vegetation

41. The site should have sufficient ground cover (grass, bushes, trees). Vegetation cover provides shade while reducing erosion and dust. During site preparation, care should be taken to do as little damage as possible to vegetation and topsoil. If heavy equipment is used, indiscriminate bulldozing or removal of topsoil has to be avoided at all costs. If wood must be used as domestic cooking fuel or for the construction of shelter, the refugees should be encouraged not to take their requirements from the immediate vicinity of the camp.

Rather, a more dispersed pattern of wood collection should be implemented in coordination with local forestry authorities (see section on site planning and management of natural resources below). A quick survey of available vegetation and biomass for these purposes should be performed. The site should not be located near areas which are ecologically or environmentally protected or fragile.

Site selection methodology

42. In order to have a concise review of a site, which has been pre-identified, the following general steps are recommended:

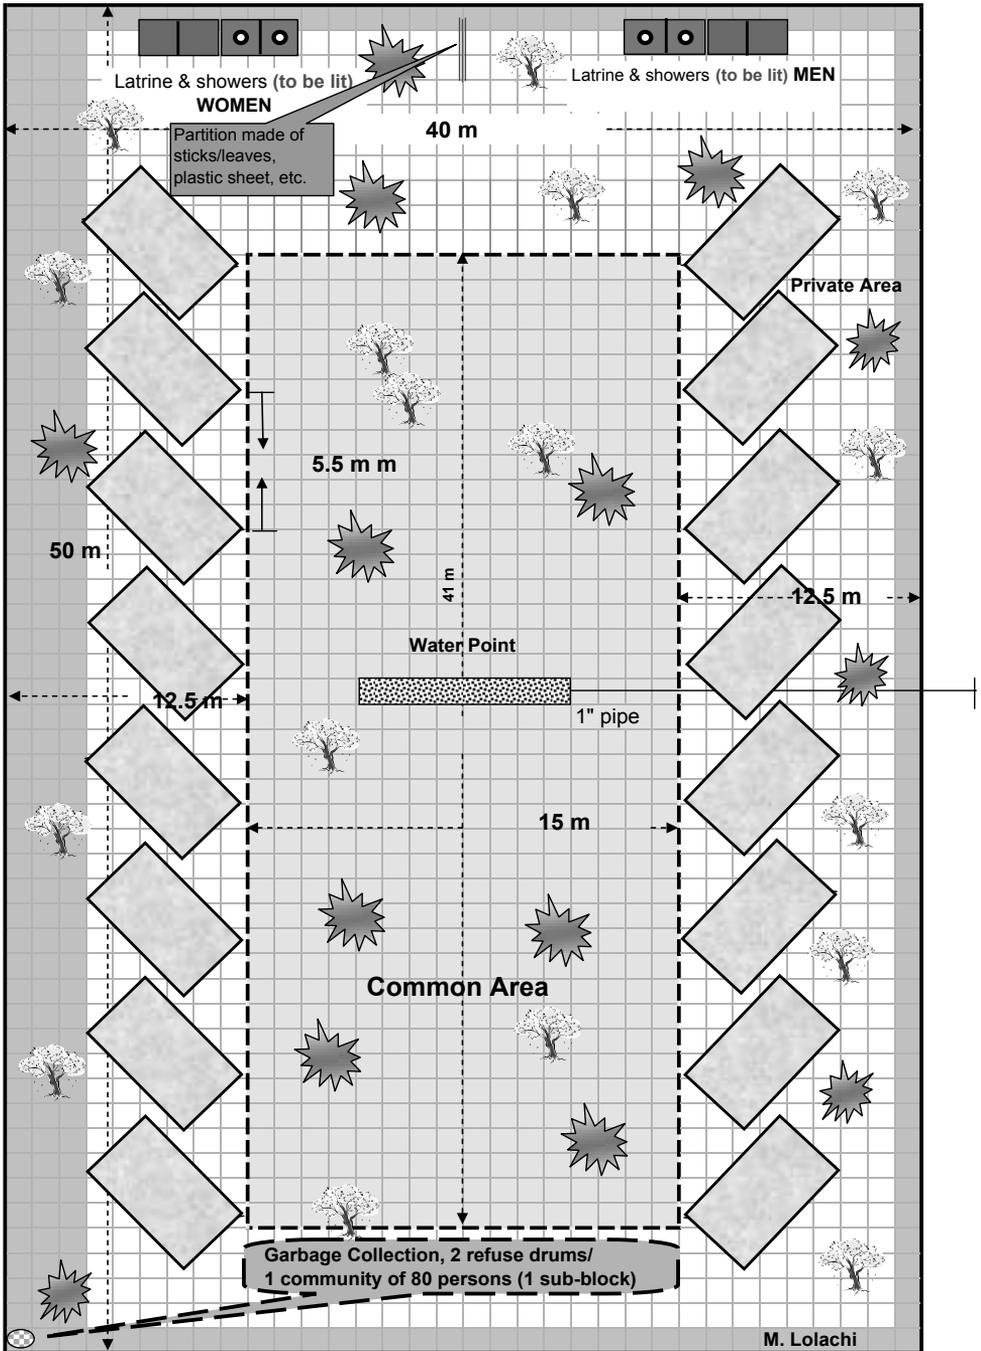

- i. Have the recommended checklist (see annex “Sites criteria”) at hand and share it with the team for their information and comments.
- ii. Ensure the team includes local authorities and those who are knowledgeable of the site and its surroundings (including seasonal implications).
- iii. Obtain suitable maps and other information showing topography, road networks, and water sources, as well as issues related to land use and land rights.
- iv. Determine site characteristics through site visits while using the checklist to record your observations; highlight the pro’s and con’s of the site and its surrounding area.
- v. Make simple estimates of the surface area of each potential site(s), through use of Global Positioning System (GPS); if unavailable, use vehicle trip-meter to estimate distances.

- vi. Assess the implications of characteristics that have been recorded in coordination with team members while avoiding weighted average methods that could become misleading.
- vii. Final decisions should be made on implications for each criterion as recorded by the team and in consultation with UNHCR offices.

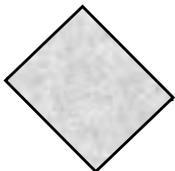

Site planning: general considerations / recommendations

- ◆ The overall physical layout of a site should reflect a decentralized community-based approach, focusing on family, community or other social groups.
- ◆ Site planning should use the “bottom-up” approach starting from the characteristics and needs of the individual families, and reflect the wishes of the community as much as possible through participatory assessment.
- ◆ Each community should be planned to include its own immediate services, such as latrines, showers, water-points, garbage collection and cloth washing facilities. This is to promote ownership, which will lead to better maintenance of facilities by the community.
- ◆ Ensure communities are not a closed form, e.g. square-shaped, but resembling more of a H-shape, where both sides are open for better interaction with other communities.

Self-contained Community

Sub-Block - Modular Design Concept, NTS

**: Shelters, 16/sub-block, 1 shelter/family,
 16x 5 = 80 refugees/sub-block, each shelter area=3x6=18 m2
 Gabled (truss) frame/ ridged roof strucutre and/or tent**

Technical Support Section, TSS

Introduction

43. The physical organization of the settlement will markedly affect the protection, health and well-being of a community. Good site planning will also facilitate an equitable and efficient delivery of goods and services.

It is imperative that all of the related standards are taken into consideration during the physical organization of the camp.

Master plan

44. A “master plan” or overall site plan should show the overall configuration of the site, its surroundings and characteristics, and its proximity to natural and existing features including settlements. The plan should take into account the social organization of the refugees and principles of module planning, and should cover the following physical features.

45. Natural and existing features:
- i. contours (e.g. lines joining points of identical elevation are called contour lines);
 - ii. rivers, forests, hills, flood plains, and swamps;
 - iii. rocky patches and sandy soils;
 - iv. existing buildings, roads and bridges; and
 - v. farm land, electrical power grids and water pipelines.
46. Planned features:
- i. shelter areas and potential expansion areas;
 - ii. roads and footpaths;
 - iii. drainage system and terracing;
 - iv. environmental sanitation plan;
 - v. water distribution plan;
 - vi. utilities, camp lighting, etc.;
 - vii. administration areas;
 - viii. educational and health facilities;
 - ix. warehousing facilities;
 - x. distribution centres;

- xi. feeding centres;
- xii. community centre;
- xiii. playground/sports centre;
- xiv. area for religious activities;
- xv. markets and recreation areas;
- xvi. fire prevention breaks; and
- xvii. agricultural plots.

47. A topographical and planimetric survey is crucial as the basis for site planning. The plan or map should have a metric scale between 1:1,000 and 1:5,000, and in case of large camps a scale of at least 1:10,000. A topographical survey describes the physical features of a landscape (rivers, valleys, mountains). A planimetric survey describes locations within an area (e.g. the camp site).

Services and infrastructure

48. The following are standards for services and infrastructure and should be referred to when preparing the master plan:

1 water tap	per	1 community (80 – 100 persons)
1 latrine	per	1 family (6 – 10 persons)
1 health centre	per	1 site (20,000 persons)
1 referral hospital	per	10 sites (200,000 persons)
1 school block	per	1 sector (5,000 persons)
4 distribution points	per	1 site (20,000 persons)
1 market	per	1 site (20,000 persons)
1 feeding centre	per	1 site (20,000 persons)
2 refuse drums	per	1 community (80 – 100 persons)

49. There are two situations for which site planning is required:
- i. reorganizing existing, spontaneously-developed sites; and
 - ii. new sites.

The design standards to be applied should be the same in each case, although methods, approach and timing may differ substantially.

50. Where refugees have spontaneously settled, they may be understandably reluctant to relocate. In such cases, involvement of refugee representatives and refugees themselves through par-

ticipatory assessment and age and gender mainstreaming in planning will facilitate a better understanding and acceptance by the refugees. An early and clear demarcation of plots, including areas reserved for services, is advisable.

Comprehensive but swift planning is essential for a new site.

Modular planning

51. Planning should start from the perspective of the individual refugee household. Begin by considering the needs of the individual family, such as distance to water and latrines; the relationship to other members of the community (other relatives, clan, or ethnic groups); traditional housing and living arrangements. Developing the community layout (U-shaped rather than square-shaped), and then considering the larger issues of overall site layout, is likely to yield markedly better results than beginning with a preconception of the complete site layout and breaking it down into smaller entities.

52. Thus, planning and physical organization of the site should start from the smallest module, the family, and then building up larger units as follows:

Module	Consisting of	Aprox. No. of persons
Family	1 family	4 - 6 persons
1 community	16 families	80 persons
1 block	16 communities	1,250 persons
1 sector	4 blocks	5,000 persons
1 camp module	4 sectors	20,000 persons

These figures are indicative and should be adjusted according to actual conditions.

53. Modular planning does not necessarily mean using a grid layout for the site. The linear, or grid layout, with square or rectangular areas separated by parallel streets, has often been used for its simplicity of design and speed of implementation. However, every effort should be

made to avoid a rigid grid design which does not account for community layout and interaction and presents difficulties in identifying proper community-based locations for services such as latrines, water points, showers etc. Grid design does not promote ownership of services, which is crucial for proper usage, cleaning and maintenance. Furthermore, it undermines the protection concerns such as the long distances that refugees have to walk for services and susceptibility to violations. Whatever design is used should take into account the natural features of the site and the identity of the refugee community.

54. The social organization, cultural background and family structure are some of the main factors that influence the physical layout of a site and should be part of the initial needs and resource assessment. This information should be gathered through review of existing documents, observations and discussions with the refugees, and others knowledgeable about this society. A full socio-economic survey of the refugee population should be conducted when/if resources allow, and will be important in subsequent planning, particularly for self-reliance and durable solutions.

Environmental considerations

55. Environmental considerations should be integrated into physical planning and shelter from the very start of an emergency. Location and layout of refugee camps, provisions made for emergency shelter, and the use of local resources for construction and fuel can have a major negative environmental impact. It is in the earlier stages of an emergency where the greatest environmental damage can occur and habits are formed. Environmental damage has health, social and economic consequences for the refugees and local population, and can have political repercussions.

Rehabilitation effectively starts in the emergency phase, and the costs of environmental damage can be substantially reduced by implementing environmental protocol early in an emergency.

56. In order to safeguard the welfare of refugees and local population by protecting their environment, the following steps can be taken:

- i. Site selection: avoid sites close to environmentally protected areas. A site should be located at least a day's walk from protected areas or reserves.
- ii. Site preparation: discriminately preserve existing vegetation and top-soil.
- iii. Camp size and density: generally, the smaller the settlements the better; allocate 30-45m² of area per person.
- iv. Camp layout: the layout (particularly roads) should follow contour lines. This will reduce erosion, preserve topsoil, and avoid the creation of dangerous gullies. A site layout that encourages community living arrangements (which can also promote security) safeguards the environment within that community.
- v. Shelter design (energy-saving through insulation): in cold climates, with extended winter seasons where continuous heating is needed, passive energy saving measures, e.g. sufficient insulation of roof, walls, and floors can save significant fuel and prove cost-effective over time.
- vi. Shelter and fuel: materials for these often come from the immediate surroundings of the camp. It is crucial at the outset to initiate a system to manage and control the use of local natural resources including wood for construction and fuel. Meeting the initial need for shelter materials from the local resources can be particularly destructive, so collection of such ma-

terials should be carefully managed, and/or provided from an alternate source.

57. A simple natural resources management plan should be drawn up as soon as possible. A key feature of a basic plan will be controlled harvesting and collection of fuel-wood and timber. This should be discussed with government bodies, such as forestry departments. Controlled fuel-wood and timber harvesting in the vicinity of the camp can include: defining certain areas and trees (by marking) which should not be harvested, allowing only dead wood to be collected; establishing an environmental awareness programme to define clear rules from the outset regarding harvesting wood and to encourage respect for the local resources; assigning responsibility for managing and harvesting certain areas to certain groups.

58. The decision on supplying fuel-wood from outside the vicinity of the camp (e.g. trucking in wood), how to supply it and the quantity which is necessary must be made according to the specifics of the situation. The organized supply of fuel-wood or other fuel, such as kerosene, can have complex repercussions and should be instituted with care. Organized supply of free fuel on a regular basis is only appropriate in certain circumstances, e.g. where there are severe restrictions on fuel from other sources. Where fuel-wood is also readily available locally, its distribution free of charge from outside the vicinity may actually lead to increased consumption. In addition, refugees rely on local natural resources for income, therefore if free fuel-wood is provided for cooking purposes, collection of wood will continue for income generating purposes (e.g. the sale of fuel-wood or timber, charcoal making, etc.). Therefore, to retain its value fuel-wood should generally be supplied in return for work.

59. The source and impact of wood supplied to the refugees also needs to be considered:

- i. Is it being harvested sustainably?
- ii. Are the environmental problems merely being moved elsewhere?

Care should be taken to prevent the emergence of local monopolistic suppliers. Finally, it should be remembered that, if it is necessary to introduce free fuel supply in the initial stages of an emergency, it will be difficult to later modify such arrangements.

60. A more comprehensive natural resource management plan for the site and its immediate surroundings should be drawn up as soon as possible (with specialist advice if necessary). Such a plan should be based on a baseline environmental survey.

A comprehensive natural resource management plan would cover (in addition to controlled harvesting of timber for construction and fuel-wood, as mentioned earlier): promotion of fuel-saving stoves and fuel efficient cooking techniques and supply of key energy saving devices (e.g. lids with cooking pots, provision of mills or milled grain). In addition to awareness raising programmes, identify the scope for better use of existing natural resources (e.g. using waste water, common areas, and areas around shelters), kitchen gardens, tree planting, and reforestation where necessary.

Gender considerations

61. In emergencies, there may be a loss of normal community structure and the changes in demographic proportions may have altered refugees' daily routines. This could also have a negative effect on traditional mechanisms for the protection and assistance of persons with specific needs. As a result of a conflict, the change of social composition in refugee communities may also include:

- i. increased numbers of female-headed households;
- ii. large numbers of unaccompanied children;

- iii. reduced number of able-bodied men; and
- iv. disruption of the extended family, with its role as social caretaker.

All the above requires our attention when planning to accommodate such refugees.

62. It is important that the specific needs of persons are taken into account in site planning. It may be difficult to reach these people if they do not traditionally form part of the leadership structure of the community. In such cases, the needs and resource assessment should obtain views of all concerned through age, gender and diversity mainstreaming.

63. Specific actions should be taken to ensure that refugee communities are organized to assist groups with specific needs with their shelter construction. Specific attention should be given to refugees unable to complete their own shelter construction.

Site planning: specific infrastructure

- ◆ Underestimation of surface area required for social infrastructure and communal services, including a playground for children, is an issue which will adversely affect the creation of a humane environment for refugees, and should be avoided.
64. At the start of an emergency, it may be difficult to construct all the administrative and communal services anticipated. Free areas should therefore be allocated for inclusion or future expansion of these services.

Sanitation

65. While water requirement is a major factor in site selection, sanitation requirements dictate site layout. High population density coupled with poor sanitation is a severe threat to the health and safety of refugees. This is often the case in spontaneous camps. Some organization of basic sanitation should be planned before reorganizing the site or transferring the refu-

gees (and thus, the problem) to a new site. This should include prohibiting uncontrolled defecation and the establishment of public latrines. Sufficient space must be left for alternate latrines. If communal latrines are unavoidable, there should be a plan for their maintenance and they should be accessible by road for facilitation.

66. For all sites, new or reorganized, the goal should be one latrine per family. Only if the latrine remains under the control and maintenance of a family group is safety and hygiene assured in the long run. The ideal location of the family latrine is on the family plot, as far as possible from the shelter. If this is not possible, the next best option would be latrines for identified groups of families, not exceeding twenty persons per latrine facility.

67. A system of cleaning and maintaining latrines by the community should be discussed prior to construction.

Water supply

68. Where possible, the maximum distance between any shelter and a water distribution point should be not more than 100m, no more than a few minutes walk. The layout of the site should contain the water distribution grid as an integral part of the service plan and the pipes should be underground. Water pipes should be kept at a depth that traffic or other surface activities do not cause damage (40 to 60 cm). In countries with very low temperatures, the pipes must be positioned at frost free depth (60 to 90 cm). Experience shows that water distribution to small, socially cohesive groups of 80 to 100 persons considerably reduces water wastage and destruction of taps, standposts and concrete aprons.

69. To aid hygiene, effluent and used water from water supply points should be well-drained and eventually absorbed in soakage pits or used to irrigate gardens.

Roads

70. A site should have access and internal roads and pathways connecting the various areas and facilities. Access roads should be all-weather roads above flood levels and have adequate drainage. If there has to be a significant amount of vehicle traffic on the site, it should be separated from pedestrian traffic. All structures, including family plot fences, should be set back approximately 5 - 7 m from roads to provide adequate visibility for pedestrians and vehicles.

Fire prevention

71. In general, a firebreak (area with no buildings) 30 m wide is recommended for approximately every 300 m of built-up area. In modular camps, firebreaks should be situated between blocks. This area would be an ideal for growing vegetables or recreation. If space allows, the distance between individual buildings should be adequate to prevent collapsing, burning buildings from touching adjacent buildings. The distance between structures should therefore be a minimum of twice the overall height of any structure. If building materials are highly inflammable (straw, thatch, etc.) the distance should be increased to 3 to 4 times the overall height. The direction of any prevailing wind will also be an important consideration.

Administrative and communal services

72. Buildings for administrative and communal services should be traditional structures, and if possible, of a multi-purpose design to facilitate alternative uses. For example, buildings for initial emergency services could later be used as schools or other community facilities. The list below includes administrative and communal services most often needed. The division is indicative only – the importance of maximum decentralization has already been stressed. Whether centralized or decentralized, administrative and other fa-

ilities should be located and designed so that they are accessible to all.

73. Services and facilities likely to be centralized (depending on the size of the camp) are:

- i. site administrative office;
- ii. services coordination offices for health care, feeding programmes, water supply, education, etc.;
- iii. warehousing and storage;
- iv. initial registration/health screening area;
- v. tracing service;
- vi. therapeutic feeding centre (if required);
- vii. marketplace; and
- viii. community centre.

74. Services and facilities likely to be decentralized:

- i. water points;
- ii. latrines;
- iii. bathing and washing areas;
- iv. garbage collection;
- v. supplementary feeding centres (if required);
- vi. education facilities;
- vii. in areas; and
- viii. commodity distribution centres.

75. The location of the centralized services will depend on the specific situation and, in particular, on the space available. With sufficient space, there may be clear advantages in having the centralized services in the centre of the camp. Where space is scarce, it may be better to have the centralized services located near the entrance of the camp. In particular, this will avoid supply trucks having to drive through a densely populated site, with the attendant problems of dust, noise and danger to pedestrians. If some form of closed camp is unavoidable, at least the centralized administrative services will probably have to be located near the entrance. The warehouses should always be near the administrative office for security reasons.

Shelter

- ◆ Refugee shelter must provide protection from the elements, space to live and store belongings, privacy and emotional security.
- ◆ Blankets, mats, and tarpaulin must be provided.
- ◆ Refugee shelter should be culturally and socially appropriate and familiar. Suitable local materials are best, if available.
- ◆ Shelter must be suitable for variance in the seasons.
- ◆ Except for tents in certain circumstances, prefabricated or special emergency shelter has not proved to be a practical option on either cost or cultural grounds.
- ◆ Wherever possible, refugees should build their own shelter, with the necessary organizational and material support.

Introduction

76. Shelter is likely to be one of the most important determinants of general living conditions and is often one of the significant items of non-recurring expenditure. While the basic need for shelter is similar in most emergencies, such considerations as the kind of housing needed, what materials and design to be used, who constructs the housing and how long it must last will differ significantly in each situation.

77. Particularly in cold climates or where there are daily extremes of temperature, lack of adequate shelter and clothing can have a major adverse effect on protection and well-being of refugees, including health and nutritional status.

In addition to shelter, provision of sufficient blankets, mattresses, additional plastic sheeting and provision of heaters will be a high priority.

78. Fire prevention measures should be established when providing heaters and it is thus necessary to deal with the procurement, storage, and/or distribution of fuel.

79. Adequacy of emergency shelter is encouraged to be assessed at any time, including arrangements already made by refugees.

The key to an adequate shelter is the provision of roofing material in line with climatic conditions and living habits of the refugees.

If materials for a complete shelter cannot be located, provision of adequate roofing material will be the priority, as walls can usually be made of earth or other materials found on site or available locally.

80. Wherever possible, refugees should build or assist in building their own shelter, with the necessary technical, organizational and material support. This will help to ensure that the shelter will meet their particular needs, promote a sense of ownership and self-reliance, and reduces costs and construction time considerably.

Type of shelter

81. Individual family shelter should always be preferred to communal accommodation as it provides the necessary privacy, psychological comfort, and emotional safety. It also provides safety and security for people and possessions and helps to preserve or rebuild family unity.

82. Emergency shelter needs are best met by using the same materials or shelter as would be normally used by the refugees or the local population. Only if adequate quantities cannot be quickly obtained locally should emergency shelter material be brought into the country. The simplest structures, and labour-intensive building methods, are preferable. Materials should be environmentally friendly and obtained in a sustainable manner.

Standards

83. At the beginning of an emergency, the aim should be to provide sufficient material to the refugees to allow them to construct their own shelter while meeting

at least the minimum standards for floor space as follows:

- i. minimum of 3.5 m² per person in tropical, warm climates, excluding cooking facilities or kitchen (it is assumed that cooking will take place outside); and
- ii. 4.5 m² to 5.5 m² per person in cold climates or urban situations, including the kitchen and bathing facilities.

84. The design of shelter should, if possible, provide for modification by its occupants to suit their individual needs. In cold climates, for example, it is very likely that persons with specific needs will remain inside their shelter throughout the day, thus more space will be required.

Plastic sheeting

85. Plastic sheeting has become the most important shelter component in many relief operations. In urban areas, roofs can be repaired with UV-resistant heavy duty plastic sheeting.

86. Collecting wood for shelters' support frames or stick skeletons can considerably harm the environment if collected from surrounding forests. It is therefore important to always supply frame material which is sufficient to support plastic. The frame material should come from sustainable, renewable supply sources. Bamboo is ideal, if available. Standard specifications for plastic sheeting can be found in Annex 1 to chapter 21 on supplies and transport.

Tents: light weight emergency tents (LWET)

87. Family tents may be useful and appropriate, for example, when local materials are either not available at all or are only seasonally available or for refugees of nomadic background. The life-span of an erected canvas tent depends on the manufacturing, length of storage before deployment, as well as the climate and the care given by its occupants. Where tents

are used for long durations, provisions for repair materials should be considered. Larger or communal tents may serve as transit accommodation while more appropriate shelter is constructed.

88. UNHCR has developed a lightweight emergency tent with a long shelf life which will save on transportation costs due to its light weight. Standard specifications for tents can be found in Annex 1 to chapter 21 on supplies and transport.

89. In general, tents are difficult to heat as walls and roof do not provide sufficient insulation. Therefore, tents are not suitable as cold climate shelters, but if there is no choice, they can save lives and bridge the time until more suitable shelters are established.

90. If required, additional blankets and plastic sheeting can be provided to increase heat retention. It is also possible to heat some tents if enough heat is produced in a tent stove. This stove needs fuel (e.g. wood or kerosene) around the clock to maintain a comfortable temperature. While using wood, environmental aspects should be considered. Whereas in use of kerosene procurement, storage and distribution could pose difficult challenges for the operation.

Prefabricated shelters

91. Neither pre-fabricated building systems nor specially developed emergency shelter units, even winterized shelter units, have proved effective in accommodating refugees. Main reasons include:

- i. high unit cost;
- ii. long shipping time;
- iii. long production time;
- iv. transport problems, including cost;
- v. assembling the shelter unit;
- vi. does not allow for cultural and social norms; and
- vii. cooling problems in hot climates.

Typically, emergency shelter provision

should have been made before these systems are used.

Shelter for cold conditions

92. Climates where cold weather with rain and snow prevails over extended periods (3 to 5 months), demand that people live primarily inside a house. In particular, persons with specific needs will require heated, enclosed spaces.

93. Shelters which are sufficient to withstand cold conditions have to be of a high standard and are complex and expensive to build. The following should be considered:

- i. structural stability (to withstand snow- and wind-loads);
- ii. wind protection of walls, roofs, doors and windows;
- iii. protected and heated kitchens and sanitary facilities; and
- iv. provision for heating and chimneys.

94. To help people survive the impact of cold weather in an emergency, a strategy should focus on the following:

i. **Individual survival.** It is extremely important to protect the human body from heat loss. Particularly during sleep, it is important to be able to keep warm by retaining body heat with blankets, sleeping bags, clothing and shoes. Heat can be generated by providing food with high calorific value;

ii. **Living space.** It is very important to concentrate on a limited living space and to ensure that cold air can be kept out of this space. This can be done by sealing the room with plastic sheeting and sealing tapes. Windows and doors should be covered with translucent plastic sheeting and stapled on window and door frames. Walls, ceilings and floors of the living space should be designed to insulate from cold air and to retain warm air as efficiently as possible;

iii. **Heating.** Keeping the inside of a shelter at a comfortable temperature (15 to 19°C) depends to a large extent on the outside temperature, the type of construction, the quality of the insulation, the orientation of the building, and on the type and capacity of the stove. Depending on conditions, a stove with 5 to 7 kW performance should have the capacity to heat a space with a floor area of 40 to 70 m² in most cold areas. When the stove for heating is used for cooking as well, particular attention should be given to its stability.

Reception and transit camps

95. Reception and transit camps are used when it is necessary to provide temporary accommodation for refugees. These camps might be necessary at the beginning of a refugee emergency as a temporary accommodation pending transfer to a suitable, safe, longer term camp, or at the end of an operation, prior to repatriation, as a staging point for return.

96. Whether the transit camp is used in an emergency or as part of a repatriation operation, the camp should be designed for short stays of 2 to 5 days in addition to a high turnover rate in a communal setting.

97. The required capacity of a transit camp will depend primarily on how many people will be channeled through the camp and their expected duration. This will depend on the absorption or reintegration capacity at the receiving end as well as the total time foreseen to carry through the operation.

98. The primary criteria for site selection for a transit camp are:

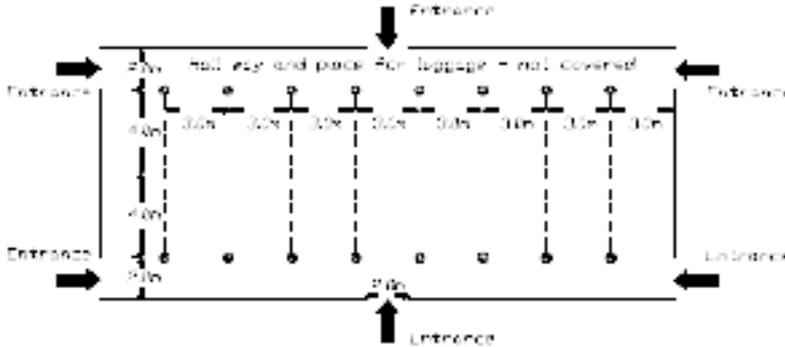

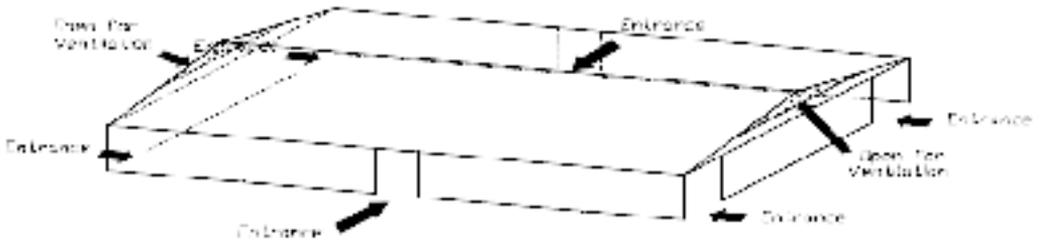

- i. good access (road, port, airport);
- ii. the availability of water;
- iii. good drainage (minimum 2% slope);
- iv. adequate conditions for sanitation; and
- v. strategically located to serve the purpose of the operation.

99. The transit camp must be strictly functional and equipped with considerably higher construction standards than regular

refugee camps. Operational maintenance must be fully supplied through the camp management. In particular, cleaning and disinfection of accommodation and sanitation areas need to be carried out on a regular and ongoing basis. Prepared food should be provided and individual food preparation should be avoided. The transit camp will therefore need kitchen facilities, wet food distribution and a dining space, if possible. In view of the expected short-term stay, a minimum of 3.0 m² per person is needed.

100. Standards for the construction of transit facilities are:

- i. accommodation: in barracks, communal tents (subdivided for families of 5 persons for privacy reasons) should be heated in cold climates; for example, a tent of 85 m² can accommodate approximately 14 to 25 persons;
- ii. sanitation: 20 persons per latrine, 50 persons per shower, plus regular and intensive maintenance is required;
- iii. water supply: absolute minimum provision of 7 litres/person/day plus water required for kitchens, cleaning and sanitation;
- iv. food preparation: approximately 100 m² per 500 persons;
- v. storage: 150 to 200 m³ per 1,000 persons;
- vi. a public address system;
- vii. lighting;
- viii. arrival and departure zones which are separated from accommodation zones;
- ix. arrival zones should include registration and medical clearance facilities;
- x. administrative offices and staff accommodation;
- xi. one health post and separate accommodation for quarantine;
- xii. security fencing (depending on circumstances);
- xiii. the design of the transit centre should include a concept of visibility and ease of movement.

Notes

--The proposed size is 27m x 12m sufficient for 90 persons.

--Length can be altered at 3.0 metre increments to suit need and situation.

--Width can be reduced by only 1.0 metre to bring total width of the hallway to 1.5 metres in place of 2.0 metres.

--The better quality plastic sheeting or plastic roll should be used. It should be noted that usage of the green plastic rolls should be limited to enclosed spaces.

--Drawings not to scale; intended only for general use.

Public buildings and communal facilities

- Public buildings should be used only as short-term accommodation to gain time to provide more suitable shelter.
- From the outset, intensive maintenance of infrastructure and utilities should be provided.
- The UNHCR shelter standards should be applied.

101. Public buildings such as schools are sometimes used initially as shelter. This is particularly the case in cold conditions which demand very rapid shelter response.

102. Where possible, such accommodation in public buildings should be a temporary solution. The supporting infrastructure of the building (water, electricity, sanitation) will deteriorate quickly from concentrated use, to the extent that living conditions can become dangerously unhealthy. The buildings decay rapidly primarily because they are unsuited to such large numbers and lack the necessary infrastructure and utilities. In addition, the very low sense of responsibility by its inhabitants contributes to the deterioration.

103. Furthermore, since the normal use of the building has to be suspended with various social and economic consequences, both local and national governments are reluctant to transform public buildings into humanitarian shelter. If such use is permitted, the need for quick evacuation

of the building should be borne in mind as this may be requested by the government.

104. In order to ensure a healthy environment, it is particularly important to ensure regular operational and preventive main-

tenance in public buildings. Neglecting to maintain a building from the outset can have serious health consequences for the refugees and economic consequences for the host government.

Situation

In emergency situations of population displacement there is always loss of personal property. Very often refugees flee with little more than the clothes they are wearing. In addition to food support people affected by crisis, therefore, need certain non-food items for their survival. These emergency situations are characterized by an urgent need to distribute life sustaining commodities other than food, such as, shelter materials including tents, plastic sheeting, blankets and sleeping mats, cooking utensils and water jerry cans, personal hygiene items such as buckets, soap, sanitary cloth and sometimes washing powder. The fair and organized distribution of emergency relief items is often problematic and groups and individuals from among the refugees may use the confusion of the emergency to gain unfair control over the relief items that are being distributed.

Objectives

To provide life-sustaining commodities to the refugee community in a fair and organized system, according to specific needs, population culture and within the environmental and geographic context.

Principles of response

- The design of the distribution system should be based on a thorough understanding of the social structure of the refugees.
- The target of the commodity distribution should be towards the family or household unit, however, assumptions should not be made about family size or structure.
- The refugees, especially including women, should be consulted and participate in the design of the distribution system. No one group should have a monopoly role over others.

- The refugee population should be kept well informed on the timing of distributions as well as the content and quantity of commodities to be distributed.
- Ensure that the population benefits equally and fairly from the commodity distribution and groups with specific needs are especially targeted and monitored and that distribution systems have 50% women in the management and monitoring.
- The commodity distribution cycle should be regular and predictable. Irregularities in the distribution cycle can increase tensions and can lead to riots.

Action

- Assess accurately and as early as possible the displaced population's demographics, cultural and traditional/social structures. Roles and responsibilities within the refugee groups are to be taken into consideration.
- Assess cultural and traditional commodities prior to the emergency and take these into consideration during the planning stage of the distribution system during the emergency.
- Use appropriate community structures (or set up new structures if necessary by gender e.g. to include women) to consult the refugees on the design and operation of the commodity distribution system.
- Set up an information system by which the operation of the commodity distribution system can be regularly conveyed to the refugees (and others of concern).
- Have in place an effective refugee participatory monitoring system for a fair and organized distribution system.

1. The principles in the chapter apply to the distribution of both food and non-food items.
2. The handbook “Commodity Distribution: A Practical Guide for Field Staff” (UNHCR, 1997) is essential reading for those who plan to set up and run a commodity distribution system (see key references at the end of the chapter).

Introduction

- Commodity distribution must be according to specific emergency needs of the targeted displaced population.
- Commodities must be distributed fairly and in an organized manner. Family/household size, age and gender makeup of the population, culture and social structure should be taken into account in the distribution ration.
- Distribution must be monitored to ensure emergency needs are met, with equal access to all refugees especially groups with specific needs.
- However ingenious the distribution system may be, it is unlikely to work fairly without the acceptance and support of the refugees themselves.
- UNHCR’s distribution systems should provide for urgent and fair material assistance to and in conjunction with the affected population families.

When to start distribution

1. There is usually a degree of uncertainty when planning distributions. Ideally, distribution of commodities should start only after full needs and participatory assessment with refugee women, girls, boys

and men has taken place and when the size and demographics of the beneficiary population is approximately known (*an accurate figure can only be known after registration*). However, the reality of almost all emergency programmes is that distributions normally start prior to these ideal conditions being reached. Try not to start distribution until there is at least a minimum framework and infrastructure in place and plan as quickly as possible as to how subsequent distributions will be improved.

Choosing a commodity distribution system

2. Two basic issues are:
 - i. how much responsibility should be given to the refugees themselves; and
 - ii. what resources are available to set up and run the system (including time, space, experienced staff as well as financial and material resources (see Table 1).
3. There are three broad categories of distribution system (see Table 1).

Note: Families affected by crisis are often quite varied with households headed by a single parent, a grandparent or child-headed households. Families are often extended to include the elderly, cousins and other members who may not have lived together previously. Families may also split up to gain access to extra rations or commodities.

Distribution systems can be classified according to who receives the commodities.

System description

Commodities are given in bulk to a representative of a large group of beneficiaries who further divides it among the group.

All of the commodities for the group of families are handed over to a representative of the group. The group usually consists of about 20 heads of family. The commodities are then immediately redistributed to the individual family heads by the representatives.

Commodities are handed over directly to each family head.

Types of situation in which these systems have been used:

- Early days of an emergency.
- Mass influx of refugees.
- No formal registration.
- Large populations.
- When the population is comparatively stable, and/or have ration cards.
- Where the beneficiaries are living in camps.
- Where the population is comparatively homogeneous.

- When the population is comparatively stable, and/or have ration cards.
- Where the beneficiaries are living in camps, settlements or integrated within the local population.

As the amount of resources needed increases the degree of self regulation by refugees increases.

4. There will probably be a period in the early stages of an emergency when it will not be possible to register or issue ration cards. However, effective distribution of commodities is possible without ration cards.

Components of distribution systems

General considerations

- The ideal distribution system should be safe and easily accessible to the intended beneficiaries.
 - Safe: Distribution should be organized in such a way that the system is safe for all who use it. Particular attention should be given to persons with specific needs and vulnerable groups.

- Accessible: Distribution points should be close to where people live and located so that access for groups with specific needs is not restricted.
- Design of distribution centre: Physical structure, proximity to road access and warehouse/s, location for security reasons (not remote or in a crowded location).
- Equal: Who receives the commodities or when the commodities are distributed are important issues to consider when ensuring that the population benefits equally; distribution should preferably be made to women (see Annex).

6. The refugees themselves (be careful not to give refugee “leaders” too much say or control) can provide the most effective monitoring and control of the distribution system. In order to do this they must be informed and involved from the start, as to the type and quantity of commodities to be distributed and method and timing to be used.

An information system (including the use of notice boards) needs to be put in place whereby the refugees can be continuously informed of changes in the quantity, type or method of distributions.

7. In the early stages of a new operation, particularly in large emergencies, effective control over distribution may not be possible (however sophisticated the system is, top priority should be given to effective control – otherwise the refugees and humanitarian workers safety is put at risk). However, from the start, each action taken should contribute to a process whereby control by UNHCR is progressively established and emergency needs are met. For example the provision of plastic sheeting, tents and other shelter material is very important because it reduces the mobility of the population. Once shelter is issued, the population can settle and commodity distribution and other services

will be easier to organize. Where has this ever been practiced? Either you set up tents beforehand and refugees are given “addresses” as in project profile or the distribution system is set up to distribute plastic sheeting.

Refugee involvement

8. Ensure the refugees are well informed (both women and men). They must know what they should receive, how much, when and how. This information should come to them directly rather than through their leadership.

The refugees should be able to see the distribution process for themselves as they are the best monitors and controllers of the process.

Ensure that the refugees participate at all levels of the distribution process. The indicator checklist for non-food items (Annex 1) should be used to assist in equal and appropriate distribution of commodities through the involvement of refugees and awareness of specific needs. Be aware, however, of the dangers of non-representational leadership (see chapter 7 on coordination and site level organization).

9. Irregularities in the distribution cycle undermine the confidence of the beneficiaries and increase their need to circumvent the system.

Logistical considerations

10. In camps, the distribution system should allow beneficiaries to collect rations close to where they live (not more than 5 km away) and at regular monthly intervals. For dispersed populations refugees should not have to travel more than 5 km to distribution sites.

11. In the case of food distribution, it is usually preferable to distribute dry uncooked rations in bulk. Avoid mass cooked food distribution for the general ration (see chapter 16 on food and nutrition).

Managerial considerations

12. Distributing relief commodities involves several organizations and many individuals, for example, the government, WFP and NGOs. Coordination structures must be put in place, including regular meetings of all interested parties. The frequency of these meetings will depend on the situation. At the start of an emergency daily meetings will probably be needed. As the situation normalizes the frequency of meetings can be reduced to one per month.

13. It is important to understand the roles and responsibilities of the main actors involved at various stages of commodity distribution. In the case of food distribution the modalities of distribution as well as the reporting requirements are set out in a tripartite agreement between UNHCR, WFP and the implementing partner. The respective roles of UNHCR and WFP in relation to food aid are set out in their Memorandum of Understanding (Appendix 3). See Chapter 15 on food and nutrition for more information on food distribution and on the role of WFP.

14. The family/household, as a basic social unit, is the target of distribution. This applies to food and non-food items. Providing assistance to and through households is effective as the basis for the distribution system and also supports the family unit. However this does not mean that the ration has to be handed to each family directly. In some situations distribution can be more effective through groups of families or other community structures.

15. Avoid payment in kind to distribution workers. It makes monitoring difficult and, in times of shortages people may be deprived of commodities in order to pay staff.

16. Ensure regular UNHCR monitoring and spot checks of all commodity distribution to ensure effective delivery and no abuse of power by those in control, including sexual favors and exploitation.

17. In camps, aim to have at least 1 distribution site per 20,000 refugees.

18. Plan to have a minimum of 2 distribution staff per 1,000 beneficiaries.

Ensure age, gender and diversity mainstreaming

- ♦ **Involve refugee women and acknowledge their role in commodity distribution by ensuring they participate meaningfully in management structures.**
- ♦ **Ensure equal and representative participation of all beneficiaries.**
- ♦ **Find out about cultural and economic differences and social structures within the population.**
- ♦ **Identify groups with specific needs and discuss with them the system.**
- ♦ **Use participatory assessment to set up systems and assess their effectiveness.**

The role of refugee women

UNHCR policy

19. UNHCR's policy is to ensure the maximum possible appropriate involvement of refugee women in all aspects of distribution. Determining the nature of this involvement requires consultation with refugee women and men and a careful evaluation of the totality of the needs and responsibilities of refugee women and their families. Failure to take these considerations into proper account can have negative implications that go well beyond the distribution system itself.

20. In the great majority of refugee communities, the objective of fair distribution will be best served by having an appropriate balance of men and women. However, it is normally women, and in particular single female heads of household, who are either under-represented or excluded.

Areas of women's involvement

21. There are three areas where refugee women should be involved:

- in the decision-making processes and monitoring;
- in the distribution itself (women supervise and/or hand out the commodities); and
- in collecting the commodities (where they are distributed to women not men).

22. Women must be directly involved in decision-making and monitoring, including being involved in planning the system and determining their own participation in its implementation. Women should comprise 50% of the commodity distribution or food committees.

23. Women should choose representatives who will be involved in the distribution itself. The extent and nature of this participation will depend on factors specific to that situation.

24. If women themselves feel that the most effective way to ensure that they receive their fair share and retain control of its use thereafter is by actually collecting, or at least being present at the distribution of food and non-food items for their household (whether or not they are its head), this should be ensured.

Equal and representative participation of all persons of concern

25. To address the issues of equal participation and effective commodity distribution, the following actions are recommended in situations that concern UNHCR:

- Ensure that men and women are involved in the planning and implementation of distribution – meet with them separately - to ensure that power dynamics are not silencing women or older persons.
- Make sure that both men and women know the quantity and variety of

items they should receive.

- Ensure that the design of the distribution system is based on a thorough understanding of the social structure of the displaced (through group leadership [male and female leaders], through groups of heads of family, or through individual heads of family) including child-headed and grandparent-headed households and that the displaced are kept continuously informed on the design.
- Make sure that distribution times and sites are easily accessible and safe to men, women, children, older persons, sick, and disabled.
- Make sure crowd controllers monitor queues, and provide a separate queue for persons with specific needs (such as those not able to stand in line for some time due to age ill health or pregnancy).
- Ensure a mechanism for displaced men and women to file complaints or indicate unmet commodity needs directly to UNHCR.

Meeting gender roles and cultural differences

26. Non-food items vary according to culture and context and should suit the needs of the population and the climate. In addition, the roles and responsibilities of the population vary according to cultural and social context. The following questions and points should be taken into consideration when planning and implementing gender commodity distribution:

- Who is responsible for carrying of and different usage of water?
- Who does household chores, cooking, caring for children?
- Who collects firewood or fuel used to cook and heat home? Ensure that women are consulted about the location and means of collecting fuel

for cooking and heating in order to address issues of personal safety.

- Ensure that men and women are consulted as to what commodities are culturally appropriate and familiar.
- Distribute appropriate sanitary supplies for women and girls, based on their preferences.
- Ensure that clothing is appropriate to climatic conditions and cultural practices, separately suitable for men, women, girls and boys, and sized according to age.
- Make sure that bedding materials reflect cultural practices and are sufficient in quantity to enable separate sleeping arrangements as required amongst the members of individual households, in particular to cover the needs of older persons, adolescents and child-headed households.
- Ensure that cooking items provided are culturally appropriate and enable safe practices.
- Ensure that existing local practices and environmental issues are taken into account in the specification of stove and fuel solutions.

27. Groups with specific needs

- Ensure that there is no discrimination or restricted access to non-food items (NFIs) based on sex, age or abilities.
- Ensure that distribution sites are in a secure area that is accessible to men, women, unaccompanied children, elderly, sick and disabled persons.
- Conduct regular consultations with women, girls, boys and men and groups with specific needs such as older persons, unaccompanied and separated children; child-headed households and disabled persons on commodity issues to ensure any protection concerns are highlighted and resolved.

- Ensure that the demands of collecting fuel on particularly vulnerable groups, such as female-headed households and households caring for people living with HIV/AIDS (PLWH/A), are addressed and that special provisions (such as the choice of less labour-intensive fuels, the use of fuel-efficient stoves and accessible fuel sources) are made available.

Monitoring

Be aware of the potential for abuse and sexual exploitation and train all staff and refugees on their roles and responsibilities and complaints mechanisms.

28. Monitoring the distribution system is an important management responsibility of UNHCR. General principles of monitoring are described in chapter 8 on implementing arrangements. Monitoring distribution includes monitoring the actual distribution of the commodity and spot checks in the camps on distribution days. See chapter 16 on food and nutrition, and “Commodity Distribution: A Practical Guide For Field Staff”, for more details about monitoring distribution systems.

Code of Conduct

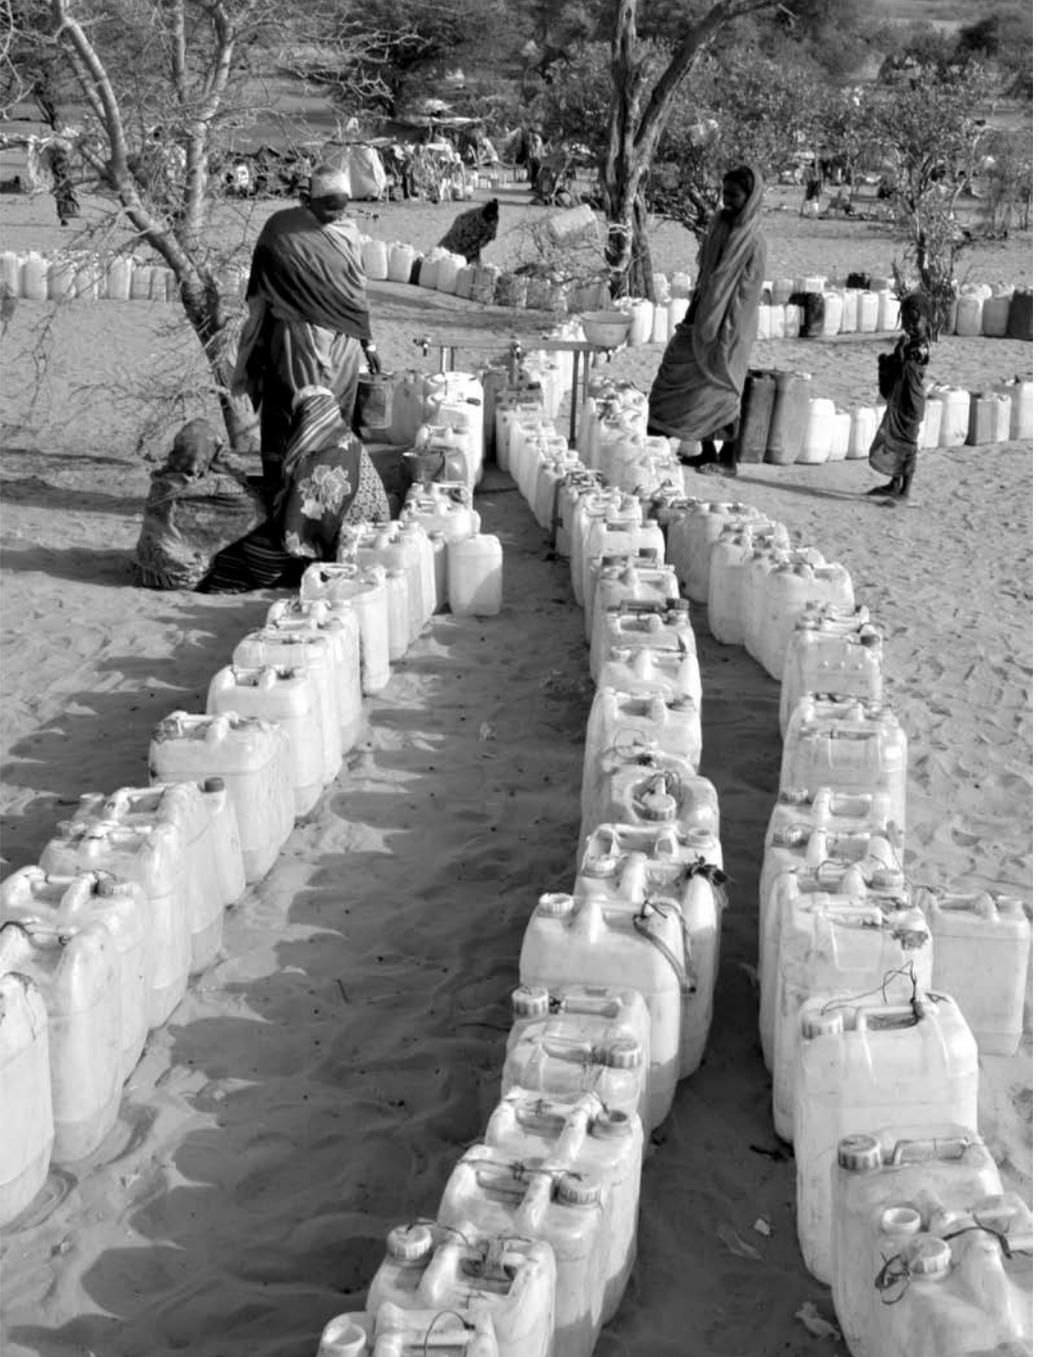

SG’s Bulletin

Annex 1: What do we need to know in order to plan and implement age and gender sensitive distribution of NFIs?

Ask/find out	Information to look for
What are the population demographics?	<ul style="list-style-type: none"> • Number of households. • Number of women, men, girls and boys. • Number of female, male, grandparent and child headed households. • Number of persons by age and sex with specific needs (unaccompanied and separated children, disabled, sick, elderly). <input type="checkbox"/> Number of pregnant and nursing women.
What are the cultural and social roles and responsibilities?	<ul style="list-style-type: none"> <input type="checkbox"/> Responsibilities for carrying of and different usage of water. <input type="checkbox"/> Who does household chores, cooking, caring for children. <input type="checkbox"/> Who collects firewood or fuel used to cook and heat home. <input type="checkbox"/> Who undertakes agricultural activities and looks after animals.
What did people have before the crisis?	<ul style="list-style-type: none"> <input type="checkbox"/> What did the population use before the displacement, e.g. cooking practices – what fuel source was used? <input type="checkbox"/> What type of clothes did people wear, e.g. scarves for women? <input type="checkbox"/> What hygiene products (including sanitary materials) do they need? Are most appropriate? <input type="checkbox"/> Who/how are decisions made about reproductive health? What NFI could be necessary?

Annex 2: Indicator checklist for non-food items

Indicator Checklist for NFIs		Status
1.	Men and women are involved in planning and implementation of NFIs selection and distribution.	
2.	Information is gathered on family structures and a distribution system is set up accordingly.	
3.	Information is gathered on special NFI needs based on age and sex.	
4.	Displaced persons have knowledge of quantity and variety of items they should receive.	
5.	Men and women benefit equally if there is payment for NFI distribution (gender balance in employment).	
6.	Women, girls, men and boys have at least one full set of clothing in the correct size, appropriate to the culture season and climate.	
7.	People have access to a combination of blankets, bedding or sleeping mats to provide thermal comfort and to enable separate sleeping arrangements as required.	
8.	Women and girls have sanitary materials for menstruation.	
9.	Training or guidance in the use of NFIs is provided where necessary (e.g. men to learn how to cook, women to build shelters).

Situation

Water is essential to life, health and dignity and is therefore a basic human right. In emergencies, it is often not easily accessible in adequate quantity and quality, thus creating a major health hazard. Hence, water is among the primary criteria in the selection of a site for a refugee camp.

Objective

To provide a sufficient amount of clean drinking water for the persons of concern and to meet their household and other communal needs in such a way that facilitates easy and safe access and is reliable, efficient, cost-effective and environmentally benign.

Principles of response

- Give priority to quantity while respecting quality
- Refugee women, girls, boys and men should be directly involved in the development and operation of the water supply.
- Ensure consideration of water supply at the site selection and planning stages and coordinate response closely with physical planning, public health and environmental sanitation measures.
- If at all possible, avoid the need to treat water – it is better to use a source that does not need treatment. If large numbers of refugees are concentrated in camps, disinfection of drinking water is absolutely necessary. Other types of treatment should be considered according to the characteristics of the raw water.
- Provide a reserve supply and spare capacity to meet temporary difficulties and the needs of new arrivals.
- Water is a precious natural resource; over exploitation will affect refugees, the host community and all other

flora and fauna in the vicinity. Monitoring is essential to avoid any such over exploitation.

Take account of seasonal variations in water quantity and quality.

- Seek expert advice and coordinate closely with the appropriate national services.

Action

- Calculate the water requirement and organize an immediate assessment of water supply possibilities; this calculation should be based on a figure of 20 litres per person per day (excluding leakage) and must also include the communal building needs.
- Make an inventory of water sources and assess all sources in terms of their water quality and yield.
- Protect existing water sources from pollution and provide good quantities of water of a reasonable quality.
- Improve access to supplies by developing sources and a storage and distribution system to deliver a sufficient amount of clean water, including a reserve supply. There must also be enough distribution points located in secure locations and provision of appropriate and adequate storage capacity at household level.
- Ensure regular testing of water quality.
- Set up a support system for operation and maintenance as well as carrying out adequate surveillance.
- Maintain and update information on water resources obtained during needs assessment, planning, construction, operation and maintenance.
- Monitor access to water by the different members of the population, particularly older persons, those with disabilities and child-headed households.

- Ensure that those who collect water are not exposed to violence, including sexual and gender-based violence (SGBV), on the way to and from water collection points.
- Consider who collects water and how this impacts on their other daily activities when designing accessibility. Bear in mind that, as it is usually women and children, water collection can keep children from attending school and can be time consuming for women who already have a very full day.

Introduction

1. People can survive longer without food than without water.

The provision of water demands immediate attention from the start of a refugee emergency. The aim is to assure availability of enough water to allow its effective distribution in the required quantities, and to ensure that it is safe to drink and is easily accessible.

Adequate storage capacity and back-up systems for all components of a water system must be assured; interruptions in the supply may be disastrous.

2. If it is evident that available sources are inadequate (in terms of yield or water quality), arrangements must be made to find alternative sources. If necessary, wa-

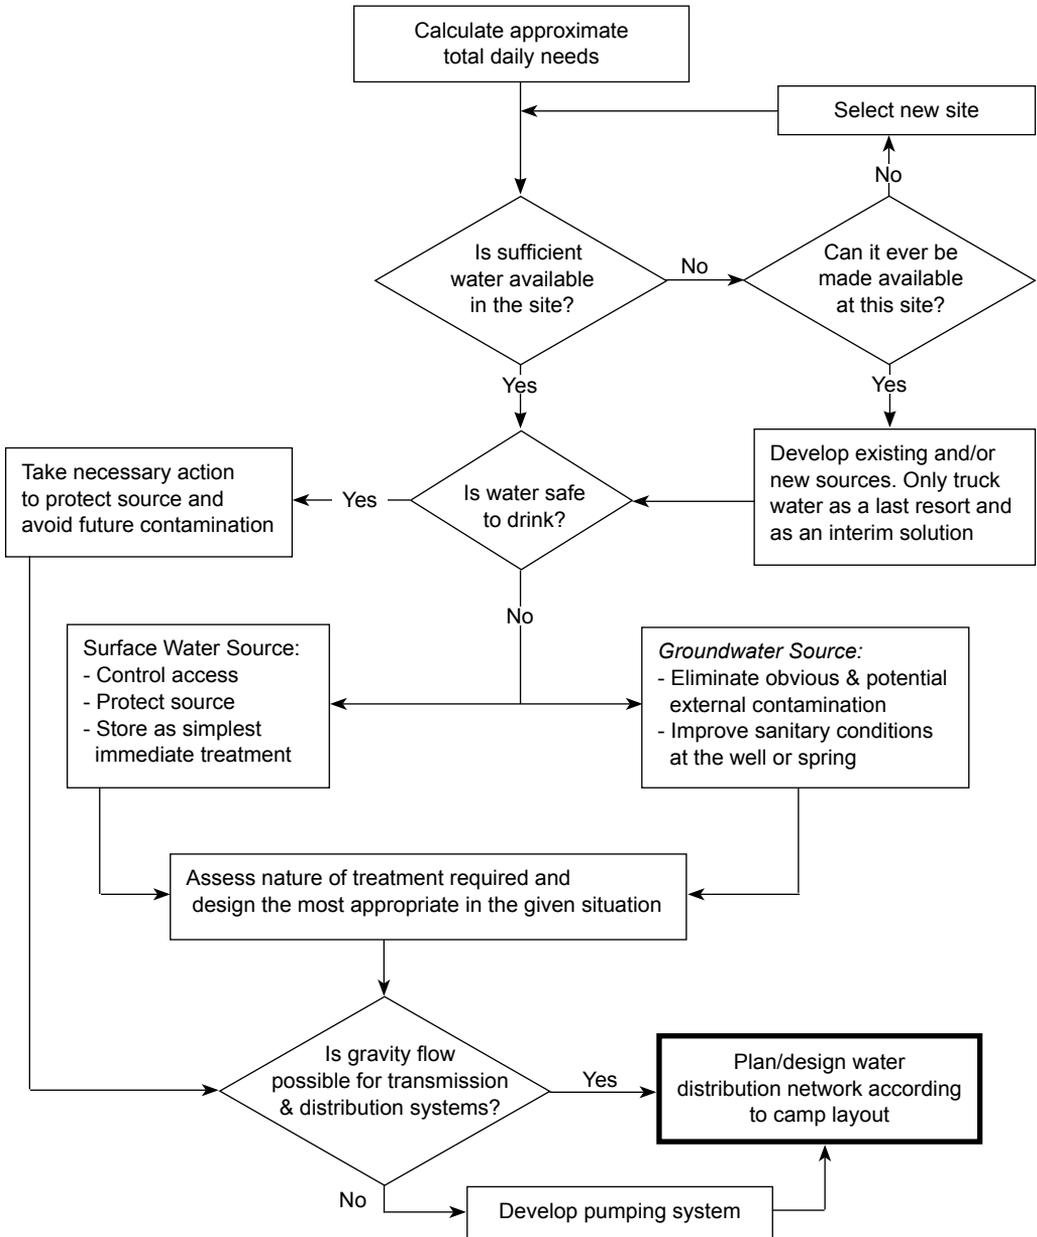

ter may have to be imported to the site (by truck, barge, pipelines, etc.). Where even the most basic needs for water cannot be safely met by existing resources, or when time is needed for further exploration and development of new sources, refugees should be moved to a more suitable location.

3. Water quality is difficult to assess. Always assume that all water available during emergencies is contaminated, especially if it is taken from surface water bodies (lakes, ponds, rivers, etc.). All sources of water used by refugees must be separated from sanitation facilities and other sources of contamination. In many circumstances, treatment will be needed to make the water safe to drink. Safety of the water must be assured right through to its consumption in the household. Hence, poor storage practices at household level must be tackled by hygiene promotion and provision of appropriate means for storage.

4. As it is difficult to predict the life-span of a refugee camp, it is best to plan on a cost-effective, long-term basis.

5. Figure 1 shows some of the considerations for planning an emergency water supply system.

Figure 1 – Considerations in Emergency Water Supply

6. The sectors of water, sanitation and site planning are highly interdependent. This chapter should be read in conjunction with the chapters on these topics.

7. In a refugee camp, access to clean water is not just "what" but also "how" we provide this life sustaining resource. A water supply system in a camp situation should therefore consider the following:

- *Adequacy and equity of water distributed:* Sufficient supply for basic needs for each and every person throughout the camp, including in school and health units.
- *Acceptability and safety of water supplied:* Potable and palatable in terms of appearance, taste and odour. Water quality is monitored regularly for faecal contamination and water safety plans are in place.
- *Social costs (burden) on the users:* Facilities located centrally and not too far from the dwellings, with minimum waiting time, and safe and user-friendly designs.
- *Physical safety of the users:* Facilities located in a secure physical environment; water distribution time and duration planned according to users convenience and cultural habits, and limited to day-light hours.
- *Reliability of supply:* There needs to be continuous maintenance of the water supply system as well as adequate water storage at the family and community level in case of interruptions.
- *Environmental concerns/hazards:* Sustainable exploitation of water sources, waste water management, improved drainage for storm water to avoid water-induced hazards etc.
- *Efficiency of supply:* Avoiding water wastage during fetching from tap stands and other system losses.
- *Participation of stakeholders:* Refugees and other sectors (health,

physical planner, sanitation) involved in water system development and operation as well as maintaining a good rapport with the host community.

Assessment and organization

- ♦ An immediate, on the spot, assessment of local water resources in relation to needs is essential.
- ♦ Technical expertise is required and local knowledge is most important. Outside expertise should be brought in only when clearly necessary. The government's central and local authorities should be involved as much as possible in this assessment. Knowledge of the local terrain and conditions is indispensable.
- ♦ Work with refugees, use their skills and train them to operate and maintain the system.
- ♦ Involve refugees, particularly women and children in determining distribution points.
- ♦ Technology and equipment should be simple, reliable, appropriate and familiar to the country.
- ♦ Refugees may compete with the local population for water resources. This may cause problems between the two groups and lead to violence, including SGBV.
- ♦ Available sources must be protected from pollution at once.
- ♦ The water supply system must be supported by appropriate public health measures and hygiene promotion activities.

Assessment

8. The objective of an assessment of water resources for human consumption is to ascertain the availability of water (its quantity and quality) and the associated technical parameters related to distribution in relation to the demand.

9. The assessment of supply possibilities requires special expertise and involves identifying possible sources and assessing the potential for development and exploitation. A typical checklist of issues to be considered when carrying out initial assessments would include:

- Procurement and studying of local maps, aerial photos, satellite imagery etc. to determine topography and water sources.
- Consolidation of regional details on land use (urban, industrial, agricultural, protected areas), climate, security, access roads, etc.
- Details of main actors and agencies working in the area and local government structures and policy.
- Current typical water consumption and sanitation practices in the area.
- Logistics and supply possibilities in the area.
- Yield estimations (volumes, flow, seasonal variation, recharge etc.).
- Current water quality and potential pollution risks.
- Legal issues in the area as well as ownership rights etc.
- Costs and operations and maintenance requirements and opportunities in the area, availability of skilled personnel.

Further information on preparedness measures in different setting can be found in Emergency Water Sources (WEDC, 1997).

10. Sources of water can be identified by: the local population, the refugees themselves, the lie of the land (groundwater is often near the surface in the vicinity of rivers and in other low places; its presence at shallow depths is usually indicated by some types of vegetation), maps (topographical, geological), remote sensing imagery (satellite images, aerial photography), previous surveys of water resources,

national or external experts (hydrologists, hydrogeologists).

11. Assessing the water resources requires expertise in, for example, water engineering, sanitation and in some cases logistics as it involves identifying various options for supply system development on the basis of local physical features, topography and overall environment of the camp site. Further surveys will be necessary to cover relevant information on the refugees, other beneficiaries, and the socio-economic characteristics of the host community. The results of such assessments and surveys should be systematically filed to ensure that such data will be available for future reference.

12. If it becomes clear that locally available expertise including that from partner agencies will not suffice, assistance from the Technical Support Section (TSS) at Headquarters should be requested without delay until a long-term solution can be secured.

13. Seasonal factors must always be carefully considered.

Supplies that are adequate in the rainy season may dry up at other times.

Local knowledge, historical and hydrological information and statistical interpretation should all be taken into account to determine the seasonal patterns.

Organization

14. Bear in mind that the economic and social bases of refugee groupings differ from those of the host communities. In addition, an influx of refugees may overstrain water resources used by the local population and lead to tension between the two groups. Special arrangements should be made with local authorities and other implementing partners for adequate operation and maintenance arrangements. The technology used in the water supply

systems should be carefully evaluated to ensure it is appropriate and that long term operational needs (fuel, spare parts, management, etc.) will be within reach of the refugees and camp managers.

15. The provision of safe water could become impossible without the beneficiaries' understanding and cooperation. As far as possible the system should be developed in collaboration with the refugees who should be involved in its operation and maintenance from the start.

Even the best system needs continuing maintenance, otherwise it will soon lose efficiency or break down completely.

Refugees without prior experience should be trained.

16. In order to be effective, water quality control and treatment have to be combined with adequate sanitation provision, improved personal hygiene and environmental health practices. Basic public health education stressing the importance of avoiding pollution of the water by excreta and of the use of enough clean containers in the household, will be essential.

17. The water supply system design and construction must be closely coordinated with site planning and layout and must be supported by health, education and environmental measures, in particular sanitation. It is only through close collaboration between these sectors that the public health and environmental protection impacts be maximized.

As a general rule, technology should be appropriate to the country and should draw on local experience.

Where pumps and other mechanical equipment are necessary, supplies should be standardized as far as possible across UNHCR and partner operations.

Locally available material and equipment should be used as much as possible.

Local familiarity, availability of spare parts, fuel and ease of maintenance are priority considerations.

18. Both organizational and technical aspects of the complete water supply system need to be carefully monitored. The use of the system must be controlled and water wastage or contamination prevented. Maintenance must be assured, and technical breakdowns quickly repaired.

The need

- ◆ **Demand:** For domestic needs and personal hygiene, calculate on at least 20 litres per person per day, after leakage. Absolute minimum survival allocation is 7 litres per day. Communal building needs will require extra water.
- ◆ **Quality:** To preserve public health and personal hygiene, a large amount of reasonably safe water is preferable to a smaller amount of very pure water.
- ◆ **Monitoring:** The water must be safe, test the physical, chemical and bacteriological quality of new sources before use and regularly thereafter, and immediately following an outbreak of a disease which might be caused by unsafe water. Groundwater levels of well should be checked regularly to verify the sustainable use of this resource.

Quantity

19. Minimum water needs vary: it increases with air temperature and physical exercise. As a general indication, the following amounts of water are desirable:

Minimum daily requirements:

Minimum survival allocation: 7 litres per person per day. This should be increased to 20 litres per person as soon as possible.

Communal needs and a spare capacity for possible new arrivals should be added.

Health centres: 40-60 litres per patient per day.

Feeding centres: 20-30 litres per patient per day.

Schools: 3 litres/pupil/day.

Mosque: 2 to 5 litres/person/day.

Hand washing at communal latrines and Offices: 1 to 2 litres/user/day for hand washing, and 2 to 8 litres/cubicle/day for cleaning.

20. Further needs may include: livestock, sanitation facilities, other community services, irrigation and construction of camp infrastructure (e.g. roads or concrete structures). Annex B of UNHCR's Water Manual provides additional indicative figures on water requirements including livestock and agricultural crop needs. The more convenient the supply, the higher will be the consumption.

A larger quantity of reasonably safe water is preferable to a smaller amount of very pure water.

21. A reduction in the quantity of water available to individuals will directly affect the overall health status of the refugee population. As supplies are reduced, personal and domestic hygiene suffers, and the reduction is reflected in increased incidence of parasitic, fungal and other skin diseases, and diarrhoeal diseases.

Even those individuals who may have traditionally lived on less than the normally recommended amount of water will require more water when living in a refugee camp, because of crowding and environmental factors.

22. The availability of water will be a factor in deciding on a sanitation system. Pit latrine systems do not need water to function; but showers, washing, laundry or pour-flush toilet facilities all require water.

23. Water will probably be of little use in controlling major fires on refugee sites owing to a lack of sufficient quantity and pressure.

If more refugees are expected to arrive, plans must allow for a substantial spare capacity over the initially assessed needs.

Quality

24. The water must be both acceptable to the refugees and safe to drink. Water that tastes and looks acceptable will be drunk by refugees who may unknowingly expose themselves to the dangers from microbiological organisms or harmful chemicals.

25. The most serious threat to the safety of a water supply system is contamination by faeces; once the water has been contaminated it is difficult to purify it quickly under emergency conditions.

26. Take great care to avoid pollution by livestock. Separation of human water supply points from those used by animals is a must. As a rule of thumb, cattle need about 30 litres of water daily. Water will also be needed, after the emergency phase, to irrigate food (vegetable gardens, crops) cultivated by refugees.

27. Water may contain pathogens, particularly certain viruses, bacteria, protozoan cysts and worm eggs which are transmitted from faeces to mouth directly in the water or via hands, flies or food. Water contamination by human faeces is the major concern, although animal faeces in water may also cause disease transmission. Water contamination by urine is a significant threat only in areas where urinary

schistosomiasis (*Schistosoma haematobium*) is endemic but should be avoided as best practice.

By far the greatest risk associated with polluted drinking water is the spread of watery or bloody diarrhoea and infectious hepatitis (Hepatitis A).

28. Acute watery and bloody diarrhoea are caused by a variety of viruses, bacteria and protozoa. The numbers of viruses and protozoa in water will decrease with time and more rapidly at warm temperatures. Bacteria behave similarly, but in exceptional circumstances may multiply in polluted water. The infectious dose of the viruses and protozoa is typically very low (<10), whereas the dose of bacteria needed to establish an infection in the intestine may be larger (~10⁴).

Monitoring

29. New water supplies should be tested for bacteriological quality before use and existing ones checked regularly and tested again immediately following any outbreak of disease which might be caused by unsafe water.

30. Potability analysis involves studying the chemical, physical and bacteriological characteristics of the water. Although it is possible to examine water for a specific pathogenic organism, a much more sensitive test for routine analysis uses an indicator organism, called faecal coliforms, the majority of which are *Escherichia coli*

(or *E. coli*), which is a normal inhabitant of the intestine of warm-blooded animals and is excreted in large numbers. If these bacteria are found in water, faecal pollution is indicated and the sample is therefore potentially dangerous. Concentrations of faecal coliforms are usually expressed per 100 ml of water.

31. A typical rule of thumb for the number of samples to undertake is 1 sample per 5000 beneficiaries per month. Water quality testing kits are available that use aseptic techniques to take samples, process them and incubate them at 44°C for faecal coliforms.

32. Every time a water quality sample is taken from the house, tap, supply system or source, a sanitary survey form (comprising of 8 to 12 questions usually) must also be completed. This is a systematic assessment of visible risks to water quality at that point. Such forms can help understand the reasons for water quality problems and deterioration in quality over time. They are also useful for identifying remediation interventions. Further details are given on the TSS Toolkit available on the UNHCR Intranet or on CD-Rom, upon request at Headquarters.

33. The results from the sanitary survey and the water quality analysis can be used as a guide to the level of risk the people drinking are exposed to when using a particular water source. The following table outlines typical levels of water quality and corresponding risk levels.

Table 1: Water quality, risk and priority levels

Faecal coliform level	No. of risks identified by sanitary survey	Risk level	Priority of intervention
0	0	Extremely low	None
1 to 10	1 to 3	Some pollution: low risk	Low
11-100	4 to 6	Polluted: intermediate to high risk	High
101- 1000 and above	> 7	Very polluted: very high risk	Urgent

34. In cases where the water is disinfected by chlorination, it is easier and more appropriate to test for the presence of free available chlorine at household level than for bacteria. The presence of a water turbidity of <5 NTU and a free chlorine in the range between 0.2 mg/l and 0.5 mg/l at the distribution point indicates an adequate quality water.

35. The water must, of course, be safe at the time of consumption or use in the household, not just at the distribution point. Domestic hygiene and environmental health measures to protect the water between collection and use are important. The water in storage tanks and any tanker trucks should also be tested regularly.

36. Where drinking water is scarce, use non-potable, brackish or salty water for washing.

Immediate response

- ◆ If even the minimum amount of water cannot be made available in time from local sources, the refugees should be moved to more suitable site or water trucking should be organized until longer term supply evaluations can be finalized.
- ◆ Whatever the water source, take immediate action to prevent pollution by excreta. (See chapter 17 on sanitation and hygiene for further details).
- ◆ Organize a distribution system that prevents pollution of the source and ensures equity if there is insufficient water.
- ◆ Ensure that refugee families have adequate means to fetch and store water.
- ◆ If in doubt on water quality, chlorinate the supply, or in emergency epidemic outbreaks, distribute chlorine tablets (or compatible other commercially available products) for use at the household level, if boiling of water is not feasible.

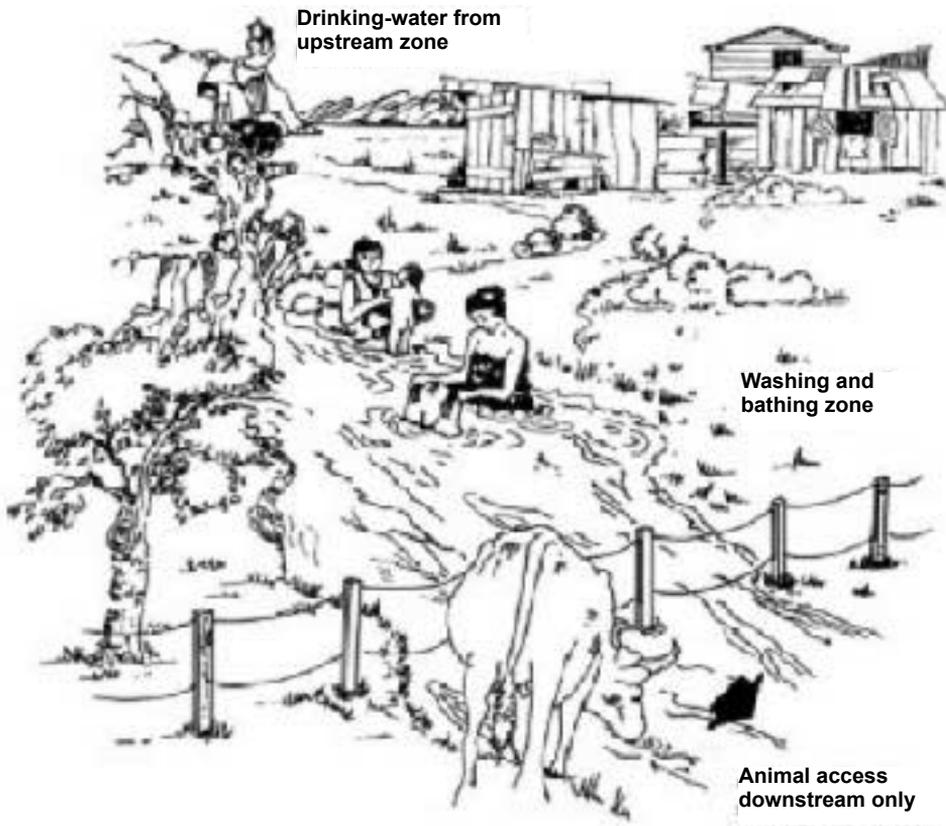

37. Work with community leaders to organize the refugee community and make the community aware of the possibilities and dangers of existing water sources and convey the idea of trying to prevent pollution of these sources by excreta. If the source is flowing, supplies must be drawn off upstream and a special area set aside for this. Then allocate an area for washing, and finally downstream of the settlement, allow any livestock to drink (see Figure 2). Fence off parts of the river banks as necessary, and beware of any dangers in the water, such as reptiles.

38. Where the source is an open spring, fence off, cover and control the source and if the source is a well prevent refugees from drawing water with individual containers that may contaminate the source by providing a windlass or hand pump.

39. If possible, arrange to store water and to distribute it at collection points away from the source. Not only does this help avoid direct contamination but storage can make water safer.

40. From the start, families will need to be able to carry and store water at the household level. They must be able to transport at least 50 litres (from water distribution points to the household) and store at least 20 litres per household (1 household = 5 persons). Suitable containers (10-20 litres) are essential. Collapsible jerrycans are recommended, especially when their transportation to the site may involve air-lifts. Jerrycans must have narrow inlets to prevent contaminating objects and children's hands from getting in. For this reason, buckets and other wide necked containers are not recommended. Sometimes empty cooking oil containers are available which may be appropriate. As jerrycans are subject to much wear and tear, bi-annual redistribution of jerry cans should be undertaken in camps.

Figure 2 – Use of fences to demarcate human and animal watering places; From Environmental Health in Emergency and disasters, WHO (2002)

If the immediately available supplies of water are insufficient, action to ration supplies and to ensure equitable distribution will be a priority.

41. Rationing is difficult to organize. The first step is to control access to the sources, using full-time guards if necessary; uncontrolled distributions are open to abuse. Distribution at fixed times during daylight hours for different sections of the site should be organized. Vulnerable groups may need special arrangements. Every effort must be made to increase the quantity of water available so that strict rationing is unnecessary.

42. In parallel to these steps, action must be taken to improve and consolidate the water supply system as a whole keeping in mind the long-term plans. The following sections outline the main considerations.

Water supply systems

(See chapter 12 of UNHCR’s Water Manual)

- ♦ A water supply system is a combination of structures with the following purposes:
 - extraction from the source, and its protection;
 - purification/treatment of the water;
 - transmission to the refugee camp or settlement;
 - storage – collection, treatment, balancing supply, service, household;
 - distribution network/reticulation (including tap stands); and
 - waste-water disposal.

- ◆ It is vital to ensure the system components are compatible with each other and appropriate in view of the supply and demand, and can be maintained from locally available resources and at the lowest possible overall (capital, operation and maintenance) costs.
 - ◆ The system will have to be planned, designed, constructed and put into operation in a short period of time (involving the refugee population as much as possible). The complexity of the task requires professional expertise which should be sought at the beginning of the project. Pay attention to long-term operation and maintenance requirements from the start such as diesel, chlorine, new taps and maintenance personnel.
43. As soon as possible, make an overall plan for the longer-term water supply system. At least some elements of the plan will be problematic – there is often a lack of basic data or difficulty in obtaining the planning or design tools (cartography, hydrological data, etc.). The following steps should be taken:
- i. Search for potential sources within a reasonable distance from the proposed camp site.
 - ii. Carry out preliminary surveys to assess water quantity and quality (see above). In addition, collect relevant information on the beneficiaries using participatory assessment on the socio-economic characteristics of the host community and on the physical environment of the refugee sites.
 - iii. Outline implementation arrangements for construction and operation.
 - iv. Produce a preliminary design concept (see chapter 12, paragraph 2, of UNHCR’s Water Manual) with alternative plans to take into account implementation time, technology considerations and cost-effectiveness.
- v. Commission detailed surveys to refine all aspects and details of the adopted design.
 - vi. Produce final designs and estimates.
 - vii. Organize refugees involvement on the project.
 - viii. Implement the project, including technical supervision, maintenance, monitoring and reporting.
 - ix. Organize operation and maintenance, including the establishment of a committee in which refugees and relevant assistance sectors are represented (health, sanitation, community services).
44. See UNHCR’s Water Manual for additional information and details on these issues (chapter 6, paragraphs 1, 36; chapter 11, paragraphs 2, 3, 11; chapter 12, paragraphs 5, 12-8, 16).
45. An ill-conceived or badly managed water supply system will soon create problems. The long-term needs of the refugees should be considered while searching for solutions to the emergency needs. All efforts to avoid long-term problems will prove, with time, very valuable.
46. All information gathered during the assessment and planning as well as design data, including sketches and maps locating pipeline and water supply facilities should be properly documented for future reference. This basic data collected and maintained during the emergency phase, is often subsequently lost or misplaced, and is essential for operation and maintenance of the system and for its upgrading, and for monitoring the level of services to see if the basic minimum standards are met.

(See UNHCR Water Manual, chapter 6)

- ◆ Rain water, groundwater from springs and wells or water from municipal and private systems are usually of better quality than surface water from sources such as rivers, lakes or dams and should be used if available.
- ◆ Surface water should be considered to be contaminated and must be treated prior to use.
- ◆ Physical protection of the source from pollution will be essential.
- ◆ New or repaired sources and equipment should be disinfected before use.
- ◆ Develop a data bank of water sources.

Introduction

47. There are three main natural types of fresh water: surface water (streams, rivers, lakes), groundwater (underground or emerging as springs) and rain water.

48. Considerations in choosing between alternative sources of water in an emergency include:

- i. speed with which the source can be made operational;
- ii. volume of supply;
- iii. reliability of supply (taking into account seasonal variations and, if necessary, logistics);
- iv. water quality, risk of contamination and ease of treatment if necessary;
- v. rights and welfare of local population;
- vi. simplicity of technology and ease of maintenance; and
- vii. relative cost comparison considering capital outlay and operation and maintenance expenditure.

49. Take careful account of systems and methods already in use locally. Adoption of well-proven and familiar techniques, combined with action to improve protection against pollution is often a sound solution.

50. Besides organizational measures to protect the water supply, some form of treatment may be necessary. However, if possible use sources that do not require treatment. The treatment of unsafe water, particularly in remote areas, can be difficult and requires trained supervision to be reliable.

51. Gather as much technical information as possible on the different water sources to allow a simple cost-benefit analysis of alternative solutions. The decision on which sources to develop and the technological approaches to be used should take into account the need to develop systems to efficiently cover both immediate and longer-term needs.

Surface water

52. Water from streams, rivers, ponds, lakes, dams and reservoirs is rarely potable. Its direct use is likely to require treatment measures (at least sedimentation and disinfection) that may be complicated to plan and implement during most refugee emergencies.

Rainwater

53. Reasonably pure rain water can be collected from the roofs if these are clean and suitable. This method can only be the major source of water in areas with adequate and reliable year-round rainfall; it requires suitable shelter and individual household storage facilities. It is, therefore, not a suitable solution in most refugee emergencies.

54. Rain water may be a useful supplement to general needs, for example through special collection for community services such as health and feeding centres. Rain water may be a useful source of safe water for individual use at a time when other water is plentiful but unsafe.

Groundwater

55. Groundwater is contained in aquifers. Aquifers are rocks or groups of rocks (ranging from sediments to porous and fractures rocks) capable of transmitting, storing and yielding water.

56. The use of groundwater during refugee emergencies would almost always be the preferred solution: if available, groundwater usually provides the most cost-effective alternative to obtain quickly the necessary quantity and the best quality. However, the decision to use it for long-term needs should be made after a detailed assessment of the aquifer and all factors relating to the recharge, transmission and release of water and on the availability of relevant expertise and equipment.

Springs are the ideal source of groundwater and should be protected against pollution at the source.

57. Water from a spring is usually pure at the source and can be piped to storage and distribution points. It should be taken off from above the refugee camp site if possible. Care should be taken to check the true source of spring water, as some apparent springs may really be surface water which has seeped or flowed into the ground a short distance away. The yield of water from a spring may vary widely with the seasons. It will be at its minimum at the end of the dry season and early in the rainy season. Seek local advice.

58. The intake or collection chamber can be by a simple structure built of bricks, masonry or concrete, from which the water flows directly through a pipe to a tank or collection point. Care must also be taken to prevent contamination above the take off points (see TSS toolkit).

59. Groundwater can be raised by infiltration galleries, tube wells, dug wells or boreholes. (Infiltration galleries extract groundwater horizontally, for example through tunnels and/or ditches). The choice of method will depend on the depth

of the water table, yield, soil conditions and availability of expertise and equipment.

60. Without good groundwater resource surveys, preliminary test drilling, or clear local evidence from nearby existing wells, there is no assurance that new wells or boreholes will yield the necessary amount of water of the right quality. They can also be expensive.

A hydrogeological survey must be undertaken before starting any extensive drilling programme.

61. Any new well or borehole must first be developed to full and sustainable yield by an initial period of pumping (usually up to 48 hours). This allows the safe yield to be calculated and pumps out finer soil particles, allowing water to pass more easily into the well. Yields can be raised by increasing the size of the well below the water table, for example in the case of a shallow well, by an infiltration gallery across the line of groundwater flow. If wells are sited too close together, yields will be reduced.

62. Wells, boreholes, infiltration galleries and pumps should be disinfected immediately after construction, repair or installation, as they may have been polluted during the work – two or three buckets of a 2.5% chlorine solution in water would be a suitable disinfectant which would then be cleaned from the well by removing 3 to 5 well volumes. They should be located where surface water and, in particular, any seasonal rain or flood water, will drain away from the well head. They should be above and at least 30 metres away from any sanitation facilities and their discharge. Special techniques are used in the design and construction of these facilities to avoid the pollution of their water.

Sea water

63. Sea water can be used for almost everything but drinking, thus reducing fresh

water requirements. In locations where no adequate sources of fresh water exist but where sea water is near, desalinization is one possible but costly option. Neither of the two basic methods – distillation using the sun’s heat nor the use of modern desalinization plants – is likely to meet immediate fresh water requirements in a major refugee emergency, and is therefore strongly discouraged. If no fresh water sources are available at a given site, relocation of the refugees must be considered as a matter of urgency.

Municipal and private systems

64. Existing municipal and private water supply systems in the vicinity of the refugees, for example those belonging to industrial or agricultural establishments, may be able to meet part or all of the need during the emergency phase and should be used where possible before taking unnecessary measures to develop other sources. A substantial increase in the yield and quality of such systems may be possible.

Pumping equipment

(See UNHCR Water Manual, chapter 7)

- ♦ Pumps will generally be needed in refugee emergencies. Seek expert local advice on what is suitable, and remember that operators, fuel and spare parts will be needed.
- ♦ As much as possible, use gravity rather than pumps for water distribution and treatment systems.
- ♦ Emergency water supply solutions involving pumps should be designed to ensure long-term and effective operation: avoid ad-hoc solutions.

65. Once an adequate source of water has been established, arrangements are needed to store and distribute the water to meet minimum needs.

The distribution system should use gravity whenever possible; gravity fed systems are much less costly and easier to maintain than pumping systems.

66. In areas subject to seasonal flooding, or where the level of a river source varies markedly, great care must be taken in placing any pumps, distribution, storage and treatment systems. It may even be necessary to mount a pump on a raft.

67. Water can be raised in two basic ways: by hand, using some kind of water container or bucket, or by using pumps (which may be driven by hand or engine). A captive rope and bucket (i.e. a windlass) carries a lower pollution risk. In this system, only the single rope and bucket that is fixed to the well is used to draw water – refugees fill their own containers from this captive bucket. The system is more reliable and much cheaper than a pump.

Where it can meet the demand, a hand operated system is to be preferred. Not more than 200 people should depend on a well with one rope and bucket.

68. The main uses of pumping equipment in refugee water supply systems are:

- i. pumping water from wells or bore-holes;
- ii. pumping water from surface water intakes; and
- iii. pumping water into storage reservoirs.

69. Additionally there may be a need to use pumping equipment for other purposes, for example, feeding water treatment plants, boosting the flow through long pipelines, feeding water tankers.

70. All pumps have moving parts and require regular maintenance. Professional advice should be sought on the selection and placing of pumps. Local familiarity, fuel supplies, spares, ease of maintenance and, above all, reliability, will be the major considerations in pump selection. Hand-pumps may be appropriate because they reduce dependence on outside supply of spare parts and fuel. However, in a refugee emergency, the sudden and large concentration of people requires maximum output of available water. Motorized

pumps have a far greater output and may, therefore, be indispensable.

71. In some circumstances, pumps powered by solar panels may be suitable. Such pumps have relatively high capital costs but are usually reliable and involve no direct running costs, just maintenance costs. The pumps naturally work best in direct sunlight but will still work with light cloud cover. A solar pump might be a solution when the output of a hand pump would be insufficient but large mechanized pumps are not necessary.

72. The minimum daily period during which a pump should be idle is that required to allow the level of water in the source to recover to its old level. Pumps should not be operated for more than ~14 hours a day and preferably not be run at night. Always have a pump on standby in a major supply system to cover repairs and maintenance.

Treatment

(See Water Manual, chapter 8)

- ♦ The most serious threat to safety of a water supply is contamination by faeces.
- ♦ Only treat water to the extent necessary. Disinfection of drinking water is required if large numbers of refugees are concentrated in camps.
- ♦ All water treatment methods require some expertise, regular attention and maintenance.
- ♦ In refugee emergencies, the priority is to improve the physical and the bacteriological characteristics of drinking water. Only under very special circumstances would the improvement of chemical quality be considered.
- ♦ Cloudy or turbid water should be clarified before disinfection because chlorinating cloudy or turbid water is ineffective.

- ♦ Water purification at household level using chlorine tablets or sachets or boiling are not generally appropriate for large-scale water treatment but may be useful in epidemic outbreaks.

Introduction

73. The potability of any source has to be assessed before a decision to use it for human water supply is taken.

74. The importance of trying to find a source that does not require treatment is obvious.

If treatment is necessary it should be the minimum required to ensure acceptably safe water, using appropriate technology and a reliable operational and maintenance system.

75. Correct plant operation and maintenance must be assured. Besides disinfection, other types of treatment should be considered in accordance with the characteristics of the raw water.

76. Determining how to treat water on a large scale is best done by experts. However, simple and practical measures can be taken before such help is available. All methods require regular attention and maintenance.

77. Besides physical measures to protect water at its source and initial disinfection of water sources (usually by chlorine), there are four basic methods of treatment: storage, filtration, chemical disinfection and boiling. These can be used singly or in combination.

Storage and sedimentation

78. Storage is the simplest method of improving water quality. It causes some pathogens to die off and any heavy matter in suspension to settle (“sedimentation”).

Leaving water undisturbed in containers, tanks or reservoirs improves its quality.

79. Storage of untreated surface water for 12 to 24 hours will already cause

considerable improvement in its quality; the longer the period of storage and the higher the temperature, the greater the improvement. Be aware, however, that in refugee emergencies, it is very seldom that the amount of water available would be enough to allow the water intended for drinking purposes to be stored for more than a few hours before it is distributed to users. Where sedimentation tanks are used, their capacity alone should equal one day's consumption, thus allowing sedimentation to take place overnight.

80. Longer storage time can help control schistosomiasis (bilharzia), as the parasites die if they do not reach the fresh water snail within 24 hours of excretion by an infected person, or if they do not reach a human or animal host within 48 hours of leaving infected snails. Thus two day's storage would provide an effective barrier to transmission of the disease, provided snails or people do not enter the tank.

81. Sedimentation clarifies cloudy water which can be greatly speeded up by the addition of aluminium sulphate (Alum). A two-tank system is often used, the first tank being a settling tank with the second storing the clarified water. If additional treatment (e.g. chemical disinfection) is required, it can be done in the second tank, and a third one used for storage if necessary.

82. Great care should be taken to prevent pollution of stored water. Storage tanks must always be covered: the dangers of contamination of open tanks more than offset the advantages of direct sunlight. The storage area should be fenced off, and if necessary guarded, to prevent children playing or swimming in the water.

Filtration

83. Sand filtration can be an effective method of water treatment. A proper slow sand filter works in two ways. Passage of the water through the sand physically filters out solids, and, more importantly, a thin and very active layer of algae, plankton, bacteria and other forms of life develops on the surface of the sand bed. This is called the "schmutzdecke", where micro-organisms break down organic matter.

84. The rate of filtration depends on the surface area, depth and type of sand through which water is passed, and the depth of water above the level of the sand surface. The usual size range of the sand is 0.3 - 1 mm. Provided the rate of filtration is slow enough, the quality of the treated water is very good.

85. Many types of sand filters are described in the available technical guides (see key references). A packed drum filter can be improvised if drums and sand are available and this may be a good way of providing limited quantities of safer water quickly, for example for a health centre. The water passes down through sand on a 5 cm layer of gravel and is drawn off at a rate that should not exceed 60 litres per hour for a 200 litre drum. If a tap is used, unfiltered water equal to the amount drawn off is simply added to the top. Other types of sand filters include slow sand filters, horizontal sand filters and river bed filters or infiltration galleries (suitable only where the bed is permeable). These can be used to treat larger amounts of water but are likely to be more difficult to set up quickly and effectively. For a river source a possible intermediate measure is to dig a well close to the bank. The water recovered will be river water but will have been filtered through the bed and bank.

Chemical disinfection

86. Disinfection of water on a large scale is a rule in all refugee emergencies. Purification of wells, sand filters, pumps and piped water systems will be required initially. Iodine or various forms of chlorine can be used for disinfection and purification. Chlorine is more widely used, cheaper and often more readily available. The most generally suitable form of chlorine for refugee emergencies is calcium hypochlorite powder. Slow-releasing chlorine, High Test Hypochlorite (HTH), tablets for wells are another option. Expert advice is essential for large-scale chlorination. As with all other water treatment methods, disinfection requires regular attention; it will be of little value if it is not fully reliable. Whilst clear water usually only requires chlorination, turbid water usually requires sedimentation and/or filtration before the chemical disinfection. Chlorination should therefore take place after any sedimentation or filtration process has been undertaken. It requires at least thirty minutes to act.

87. Care must be taken to ensure strict control of any chemical disinfection process and particularly to test the water for chemical residual levels after each disinfection and before distribution. After chlorination, and once chlorine has reacted, (about 30 minutes after dosage) there should be 0.5 mg/l (0.5 parts per million) of free available chlorine left in solution, in other words, still available to kill bacteria. The amount of chlorine required to achieve this is usually a broad indication of the level of pollution. If the amount of free available chlorine is significantly higher than 0.7 parts per million, people may not be prepared to drink the water; over-chlorinated water tastes unpleasant and will have the reverse of the desired effect if people therefore prefer untreated water.

88. A pocket size chloroscope (chlorine comparator kit, preferably of the DPD1 type) tests for residual chlorine levels. This test is simple and all treatment plant attendants should be trained to use it to frequently check the water quality. In view of the fact that water may be kept in storage, after chlorination, for some time before distribution, and bearing in mind that residual chlorine levels tend to drop with time, it is important to ensure any water leaving the plant should have, at least, a residual chlorine content of 0.5 mg/l (or parts per million) of free available chlorine to be regarded as safe.

89. When chlorination equipment is not working, the water should not normally be distributed. Therefore to ensure a continuous water supply, back-up chlorination equipment should be available in any water treatment plant.

90. Chlorine and iodine water purification tablets are also available, but are rarely suitable for water treatment for large populations. They may be used in health or supplementary feeding centres.

Boiling

91. Boiling is the surest method of water sterilization. At low altitudes, water that is simply brought to a rolling boil can be assumed to be free of pathogenic bacteria. Boiling should, however, be continued for one minute for every 1,000 metres of altitude above sea level, as the boiling temperature reduces with altitude. Domestic fuel supplies may limit the feasibility of this option as boiling requires about 1 kg of wood per litre of water, although environmentally friendly stoves can reduce this amount of wood. However, if the refugees have traditionally boiled their water and can continue to do so, this should be encouraged and, at least initially, might make the need for other types of treatment less urgent.

Storage

- ◆ All refugee sites must be provided as soon as possible with adequate water storage facilities, in the distribution system as well as at household level;
- ◆ Water storage may be the only means of ensuring a constant availability of water to cover the needs of a camp population;
- ◆ In general, use local technology for the design and construction of storage tanks or reservoirs. However, using prefabricated tanks may sometimes be the only way to provide water quickly enough in emergencies. Whereas large ferro-cement tanks (45 to 90 m³) (see TSS toolkit for details) are a good solution to use in long-term operations while prefabricated tanks are used in the initial emergency phase;
- ◆ Ensure that the size, location and overall design of storage tanks are compatible with all other system components and design characteristics.

92. In nearly all systems, it will be necessary to store water in covered tanks between the sources and distribution points. As well as providing an essential reserve both during the emergency and for long-term use, storage will facilitate monitoring, collecting, treating and distributing safe water.

All refugee sites and families must be provided with facilities as soon as possible to store an adequate reserve of water.

93. The size of the reserve to be used will depend on the number of people and on the nature of the water supply system.

Water can be stored in various locations:

- at the water collection point in tanks;
- in central storage tanks (before or after treatment) to balance supply with demand and to allow for gravity-fed distribution;

- at distribution points in tanks, including public stand-pipes or other service points at health centres, camp administration facilities, staff houses, etc.; and
- at the refugee household level in small containers. These containers should not be the same as the ones used to collect and transport water from distribution points.

94. Whatever the type of storage needed, adequate enclosure should be provided to prevent any contamination from humans, animals, dust or any other source. A tight cover and dark storage also prevent algal growth and breeding of mosquito larvae.

95. In areas with pronounced dry and rainy seasons, the construction of a pond reservoir to collect water may be an option (depending on the local topography), despite the dangers of pollution and of mosquito breeding. Catchment tanks for the collection of surface water can also be considered. Pits are dug in the ground to catch and hold the water which runs off hard ground during heavy storms. They need a special lining to hold the water and should be covered if possible.

96. Tanks above ground may be needed where the water table is very high and contamination cannot otherwise be avoided. Many types of simple and portable storage tanks are available, and some can be supplied with a complete distribution system. Headquarters' advice should be sought if local resources cannot meet this need.

Distribution

(See UNHCR Water Manual, chapter 10)

- ◆ An appropriate water distribution system should ensure an even coverage of water needs among camp beneficiaries.
- ◆ Keep the distribution system simple.

- ◆ Under normal circumstances, water distribution in refugee camps should be carried out through public distribution stand-pipes located centrally with safe access.
- ◆ Every measure should be taken to minimize wastage and leakage of water in the distribution system as well as at the stand-pipes.
- ◆ Refugees must have easy but controlled access to water.

Ideally, no dwelling should be further than 200 metres or a few minutes' walk from distribution points.

97. Experience has shown that where people have to fetch water from considerable distances, they tend either not to fetch enough to limit water-washed diseases or to collect water from closer but contaminated sources. Water distribution will be an important consideration in the layout of the site to avoid potential sexual and gender-based violence (SGBV) and mitigate against other social burdens as often it is women and children who have the task of water collection. The areas round the distribution points should be paved with stones or gravel, or protected by boards, with a run off structure to allow proper drainage.

98. Water can be distributed to individual users in many ways, depending on local conditions. Uncontrolled access by individual consumers to primary water sources should be avoided.

A distribution system should have a sufficient number of outlets to ensure that people do not need to wait for long periods to have access.

99. Service and administrative buildings should be provided with private connections.

Equity in the distribution of scarce water is an extremely important consideration.

100. While persons with special needs (the sick, wounded, most severely mal-

nourished, children, pregnant and lactating women and the disabled) should have adequate and assured allocations, scarce water must be evenly shared among the rest of the population. Refugees should be encouraged to assume responsibility for equitable distribution. Arrangements should be carefully monitored to detect and prevent abuses. In some situations, water meters have proved a cheap and effective way of identifying excessive use and reducing wastage/leakage.

101. Standpipes with push taps are recommended to be used as outlets where possible. Multiple tap standpipes are normally constructed, each installation having usually between 2 and 6 individual taps. Taps are very vulnerable and spares must be available. Where water supplies are limited and the site is crowded, valve distribution points which can be chained shut may be the only effective solution.

There should be at least one tap per 80-100 refugees and no more than 200 refugees per hand pump or per well with one rope and bucket.

102. The larger the number of people using a single source or outlet of water, the greater the risk of pollution and damage. Whatever the final distribution system, this must be carefully controlled and supervised – guards are often needed.

103. The design, construction, operation and maintenance of the water supply system should be carried out bearing in mind the need to minimize water wastage (from taps, pipes etc.) This is particularly important in systems based on low yield water sources or on those requiring treatment or pumping.

104. The community itself will also generate a certain amount of waste water. This must not be allowed to become a danger to public health, and it may instead be usefully recycled, for example to water livestock, irrigate vegetable gardens, clean pour-flush latrines or else be disposed of via a soakaway.

Potential environmental impacts:

105. The following provides a generic list of potential environmental impacts associated with water and related activities in a camp situation:

- Depletion of the source as a result of unsustainable extraction or collection of water.
- Contamination of the local water (surface and sub-surface) regime due to improper disposal of waste water and human-waste, faulty design and operation/maintenance of the piped water network, excessive extraction of groundwater (salt water intrusion in case of coastal zones and other harmful constituents in the local geological formation) and other related activities in the camp.
- Impacts to local environment due to construction and operation of water supply system (physical structures and chemicals if used), intensity and magnitude of which would largely depend on the nature and size of the project and the sensitivity of the local ecosystem.
- Impact on social environment caused by potential conflicts with the host communities when sharing the same water sources.
- Camps and settlements may be subject to flooding if wrongly located (e.g. in river beds, in wadis, low-lying flood-plains).
- Inappropriate drainage, soil and water conservation measures as well as poor water management in irrigation systems may lead to erosion, floods, groundwater contamination and soil salinization.
- Camps or settlements close to open streams or over unconfined aquifers may cause downstream contamination.

Situation

Overcrowding, a lack of access to basic services, a harsh environment and disruption of normal sanitation habits can threaten the lives and well-being of the refugees in emergencies. Proper sanitation is a key aspect of the hygiene cycle involving water and health and is fundamental to a multi-sectoral approach in emergency response.

Objective

To prevent the spread of disease, and to promote a safe hygienic living environment for the refugees.

Principles of response

- Programmes must be developed in cooperation with the refugees and, as far as possible, run by them with gender-balanced approaches. The measures taken must be culturally acceptable to the refugees.
- Swift provision of a basic system for human waste disposal is better than delayed provision of improved systems.
- Take full account of sanitation needs in site selection and layout.
- Make full use of locally available human, material and technological resources. This includes using both skilled and unskilled refugee labour, using public health or sanitary engineering expertise available in the national institutions, and relying on the traditional practices of the refugees and the local people.
- The materials and technology chosen should be as simple as possible.
- The sanitation programme must include provisions for continuous maintenance of the sanitation facilities and services. Allied to this are on-going hygiene promotion activities.
- The best guarantee that latrines will be used and kept clean is to allocate

them on an individual or family basis. Refuse disposal should be arranged on a community basis.

- Wherever possible, restrict the use of chemicals (for the control of rats, flies and other pests particularly) to specific places and for a limited period of time. Environmental measures should be favoured instead.

Action

- Localize defecation and prevent contamination of the water supply sources.
- Collect baseline data on the site and draw a sketch of the area to locate potential zones for sanitary facilities.
- Develop appropriate systems for disposal of excreta, garbage, and waste water. Control vectors of public health importance such as mosquitoes, flies, fleas, lice, bugs, rodents and other vermin.
- Plan the amount of facilities and services to be provided. Optimum standards are: for excreta disposal - one latrine per family; for refuse - one bin of 100 litre capacity for 10 families or 50 persons; for solid waste management - one landfill of about 60 m³ (50 m² by 1.2 m deep) for 500 people (WEDC, 2002); one sanitarian for every 5,000 persons, and one sanitation assistant for every 500 persons.
- Establish sanitation teams for the construction and maintenance of infrastructure;
- Set up services for vector control and burial of the dead.
- Establish a monitoring and reporting system for all environmental health services in coordination with the general health surveillance system.
- Include sanitation and hygiene promotion as an integral part of health education.

Introduction

1. Sanitation includes: safeguarding water quality; proper disposal of human excreta, waste water, garbage and dead bodies; insect and rodent control; safe food-handling practices; and effective site drainage. Such measures are essential, along with good personal, household and community hygiene practices, to achieving improvements in public and environmental health. All these activities, and the provision of health care, are very much inter-related and should be considered together. In particular, this chapter should be read in conjunction with the chapters on water, health and site planning.

2. Disruption and the crowding of people together who are accustomed to living in different and less crowded conditions, makes adequate sanitation of critical importance. Basic services are often lacking. In these conditions, indiscriminate disposal of human and other waste poses a serious threat to health and so cultural practice under normal conditions may need to change.

3. Due to unfavourable environmental factors or socio-cultural habits, the implementation of sanitation programmes in refugee camps can be difficult. Additional constraints include:

- i. inappropriate sites that are easily flooded, barren and/or inaccessible;
- ii. lack of space;
- iii. limited availability of local materials due to either natural factors or considerations related to environmental protection;
- iv. limited time for the community to get organized if only in a rudimentary way; and
- v. lack of qualified personnel.

4. Sanitation measures integrated with effective hygiene promotion work by and with the refugees are important. Monitoring will be essential, the effectiveness of the services will depend to a significant degree on regular and thorough maintenance and inspection.

Basic principles and standards

- ♦ Take full account of sanitation needs in site selection and layout.
 - ♦ Analyse sanitation and hygiene issues as part of the initial needs and resources assessment.
 - ♦ Seek professional advice from those with local knowledge.
 - ♦ Consult and involve the refugees in the design and location of sanitary facilities, and particularly their maintenance.
 - ♦ Integrate hygiene promotion activities into the community health programme and pay special attention to sanitation matters at schools for refugee children.
5. As stressed in the chapter on site planning, sanitation will be a very important consideration in site layout, and the organization and operation of the sanitation services must be integrated with other community services.
6. Developing adequate sanitation in a refugee emergency is difficult; but correcting mistakes is even more difficult. Expert advice should be sought from a public health engineer who is familiar with the habits of the refugees and nationals of the country of asylum, and if possible has experience of refugee emergencies. Assistance should first be sought locally from sources such as government departments, the UN system, NGOs, universities, consultants or contractors. If these cannot meet the need, Headquarters' assistance should be requested.

7. Good sanitation depends to a great extent on the attitudes of the community and the people who run the system. The systems and services developed should be able to operate effectively with a minimum of outside involvement. Refugees themselves must be trained to run the sanitation and hygiene promotion programmes.

8. The public health education programme must place proper emphasis on the importance of sound sanitation practices. The link between excreta contamination and disease must be clearly understood by all.

Whatever the success of the sanitation system with adults, children will present both a special opportunity and a special challenge.

Children are both the main sufferers from excreta-related diseases and also the main excretors of many of the pathogens that cause diarrhoea (it is important to remember that children's faeces have higher concentrations of pathogens than adults). Teaching sanitation measures and sound hygiene practice in schools is therefore essential.

9. Measures to contain human excreta and to dispose of refuse should be taken immediately.

Table 1: – Number and types of sanitary facilities required

	FIRST OPTION	SECOND OPTION	THIRD OPTION
EXCRETA DISPOSAL	1 latrine / family (or 1 latrine / two families)	1 cubicle / 20 persons	1 cubicle / 100 persons or defecation field
	STORAGE	TRANSPORT	FINAL DISPOSAL
REFUSE/GARBAGE	1 bin, 100 litres /10 families or 50 persons	1 wheelbarrow /500 persons and 1 tipper /5,000 persons	1 landfill (50m ² and 1.2 m deep) / 500 persons and 1 incinerator and 1 deep pit for each clinic

Since it is almost impossible to estimate how long refugees will stay in a given site, more long-term facilities should also be established simultaneously. For example, once a defecation field has been established, latrine construction should begin at once. The greater the time lag between those two actions, the more difficult to shift people from their previous habit (defecation in the open) to subsequent building and use of latrines. Even in hot, dry climates, human excreta disposed of on the ground can favour the transmission of diseases.

10. Communal facilities, especially latrines are difficult to maintain and keep clean. However, refuse management (especially transportation and final disposal) is better organized on a communal basis.

Sufficient bathing cubicles (separate for male and female) should be allowed for when communal facilities are required. Domestic waste water drainage requires a combination of both individual and communal systems. Drains collecting waste water from each household have to be connected to main ones which will channel those waters away from the living quarters.

11. General norms and standards related to specific activities (excreta disposal, solid waste, vector control, etc.) should be seen as indicative only and be adapted in each case to the prevailing social, cultural and physical conditions. Table 1 above gives standards which can help to work out a preliminary quantitative estimate of the most urgent needs.

12. Surveys of the status of sanitation programmes should be carried out regularly and corrective action taken (see Annex 1, Sanitation Survey Form).

Human resources and organization

- ◆ Appoint a focal point.
- ◆ One sanitarian for every 5,000 persons and one sanitation assistant per 500 persons should be recruited from among the refugees or from other sources.
- ◆ Community participation is the key to successful sanitation projects.

13. A focal point for sanitation must be appointed at the very start of the emergency, and responsibilities of various partners clearly defined. There are not many agencies specializing in sanitation.

14. The first step in appointing the focal point is to investigate the availability of local expertise (a civil engineer specialized in sanitary engineering as an ideal example). Recourse to outside assistance has to be contemplated if local expertise is not available.

15. At camp level, sanitation teams or brigades, provided with basic hand-tools, should be set up to carry out urgent tasks (digging trenches or pits for excreta and waste disposal). A hygiene promotion programme should be launched simultaneously. Each team should be headed by staff that have good knowledge of sanitation (including medical and engineering aspects).

One sanitarian for every 5,000 persons and one sanitation assistant per 500 persons should be recruited.

16. It is always more efficient to have only one agency responsible for both sensitizing people to sanitation and supervising related activities. Education on sanitation should focus on the “how and why” of hygienic containment of human excreta,

and simple methods for waste disposal and hygiene at a household level (water storage in the home, habitat and personal hygiene, etc.). Women, teachers, leaders, and school children should be actively involved in such a programme.

17. Community participation is a key to the success of sanitation projects. Hygiene education is a prerequisite to that participation. It should nevertheless be recognized that it takes time to convince both the community and individuals about benefits they can expect from a sanitary environment. Concrete examples such as pilot latrines near clinics, market or other places are therefore very important to support environmental health programmes.

18. Refugees should be provided with tools and basic materials (and incentives in some cases) to encourage them to contribute to the improvement of their own living conditions. They should be gradually integrated into the sanitation teams, the ultimate goal being that the refugees themselves should do most of the maintenance tasks.

19. Annex 2, Resource Inventory Form, gives a checklist of the human and material resources needed for sanitation and hygiene promotion work.

Human excreta disposal

- ◆ Take immediate action to localize excreta disposal and prevent contamination of the water supply.
- ◆ Carefully consider cultural and physical factors and ensure that appropriate anal cleaning materials and hand-washing facilities are available.
- ◆ Communal trench latrines may be needed initially, but in most circumstances pit latrines are much better.
- ◆ Ensure that latrines are located in secure areas so that they can be used at night and are safe for women and children.

- ◆ Facilities should be designed in such a way that they can be used by all people including children, the elderly, pregnant women and people with disability or illness.

Introduction

20. The priority is to create an efficient barrier against faecal contamination. This can be assured through a careful planning of camp layout and the provision of a sufficient number of sanitary facilities, ensuring that these facilities are properly used and kept clean, and do not become the source of problems such as bad smells and flies, and do not collapse when it rains.

The most common cause of breakdown is inadequate maintenance, even for properly designed and installed systems.

21. The best guarantee of proper maintenance is the individual family allocation of latrines. Breakdown of latrines will lead to contamination of the environment and a high risk of infection and disease. There must be regular inspection and maintenance.

Even when in working order, latrines will not be used unless they are clean. Latrines must be cleaned daily.

22. Individual families will be responsible for their own units, but where communal latrines are unavoidable, special arrangements to keep them clean will be essential. Particular attention must be given to the maintenance and cleanliness of the latrines serving community facilities such as health centres. Refugee workers with proper supervision will be required. It may be necessary to pay or otherwise compensate those who are responsible for keeping communal latrines clean and operational.

23. Disinfectants prevent the biological degradation of excreta. However the regular addition of soil or ashes, if available,

to trench or pit latrines may help control insect breeding and reduce odours.

Disinfectants should not be poured into the pits or tanks of latrines.

24. Two main factors will affect the choice of an excreta disposal system: the traditional sanitation practices of the refugees and the physical characteristics of the area, including the geology, the availability of water, rainfall and drainage. Failure to take proper account of these can easily result in the system itself rapidly becoming a health hazard.

25. The essential starting point is to find out the traditional sanitation practices of the refugees and how these can be modified to reduce health risks in a refugee emergency. The following information will be required:

- previous sanitation system and practices;
- method of anal cleaning;
- preferred position (sitting or squatting);
- need for privacy;
- segregation of sexes and other groups or individuals with whom it is culturally unacceptable to share a latrine;
- cultural practices of children;
- cultural taboos (for example, against contact with anything that may have touched excreta of others);
- social factors, including likelihood of community action to ensure proper use of proposed system;
- need for special orientation (direction) of latrines in some cultures; and
- systems used locally in neighbourhood of site.

26. Arrangements must be made to assure the availability of appropriate anal cleaning materials at or near all latrines. This is essential for hygiene.

The latrines must be safe for children, and must be able to be used at night.

Pay attention to security for women: for communal units some form of lighting should be provided and it may be necessary to provide guards.

Immediate action

27. Initially the refugees are likely to defecate indiscriminately, contaminating their environment and often the water supply. In consultation with the community leaders, the best first step is to demarcate defecation fields to localize and contain excreta.

28. Designate an area or areas (about 50 m x 50 m each) away from the dwellings and down wind, but sufficiently close to be used. Separate areas for men and women are usually desirable. Within the defecation field, strips of land – roughly 1.5 m wide, 20 m long, on each side of a central access path – will be used, one after the other, beginning with strips farthest from the entrance.

29. Based on a recommended surface area of 0.25 m² per person per day, exclusive of access paths, defecation fields of the size above would be sufficient for about 250 people during a month, or 500 people during two weeks. Operating defecation fields beyond one month is not advisable.

30. Fence the area(s) and provide privacy by means of partitions and shallow trenches (in the strips) and spades, if possible. Covering excreta with ash, lime or

just soil lessens health risks. Locate such areas where the surface water run-off will not cause contamination. Protect the area with cut-off ditches.

31. A publicity campaign will be required to encourage refugees to use these areas and not defecate indiscriminately near dwellings or the water supply. At least one attendant should be assigned to each defecation field. A hand-washing facility should always be installed nearby.

Selection of a system: basic considerations

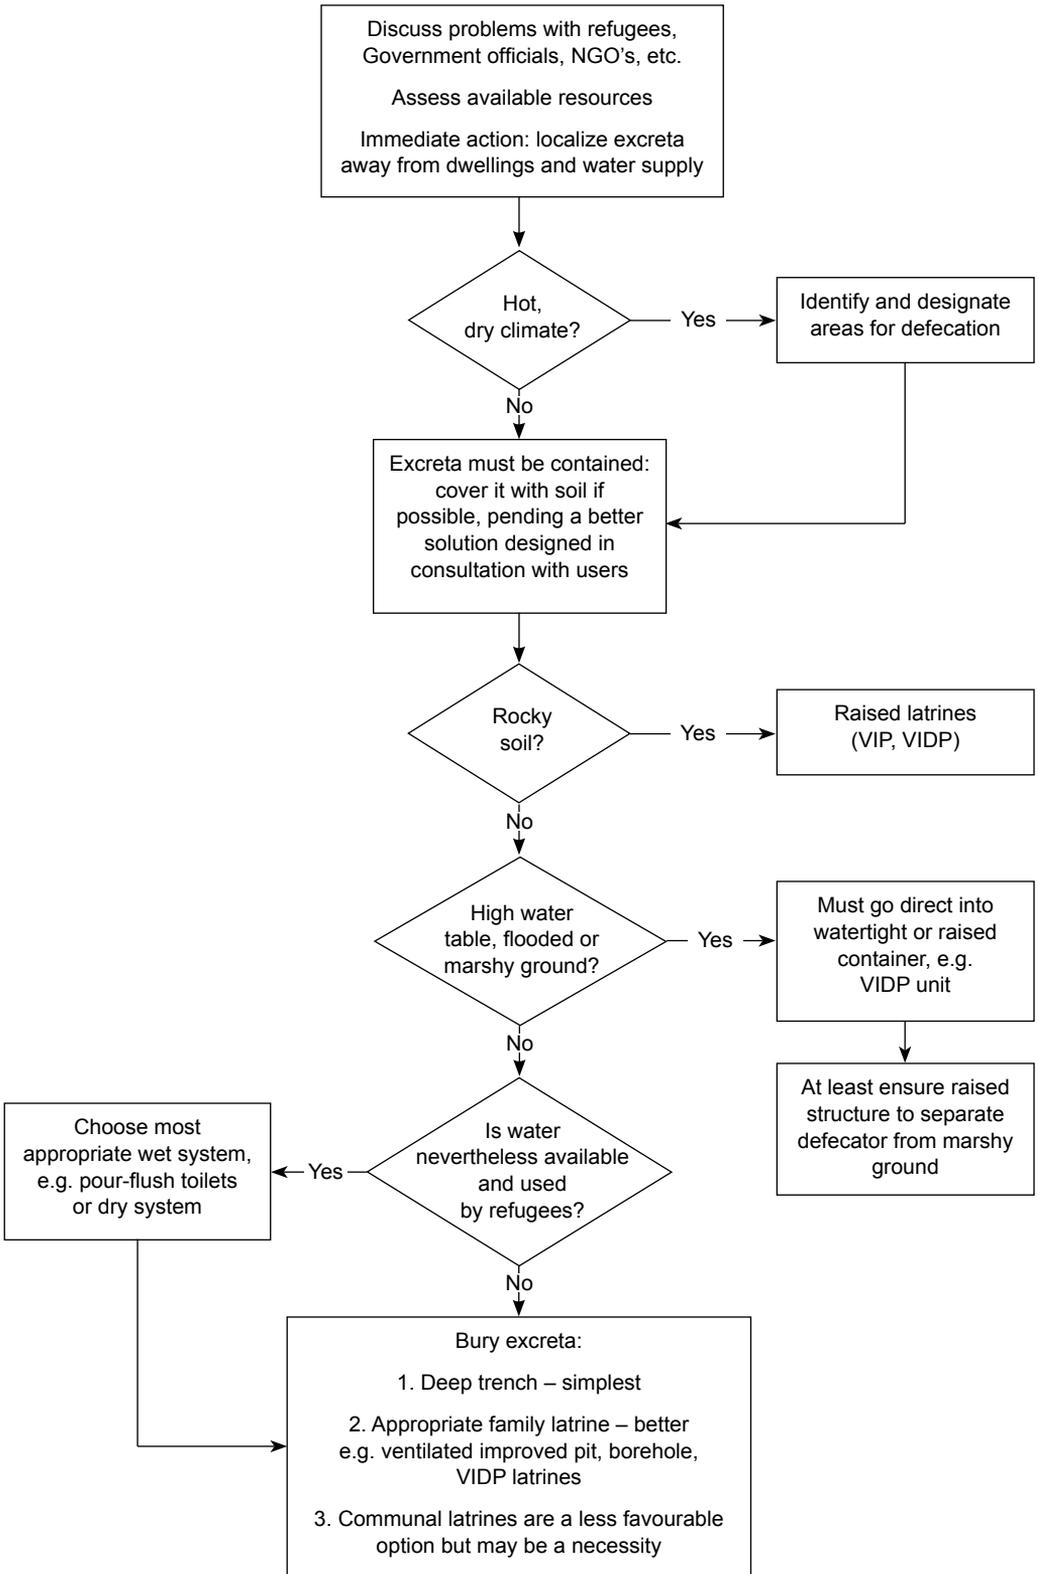

32. The selection of an excreta disposal system suitable for a particular situation requires consideration of a number of factors. In an emergency, however, time is the critical factor. Pollution of the environment by excreta, with all its attendant risks, cannot be stopped without immediate sanitation measures. Thus the range of choice is always much more limited at the very outset of an emergency.

33. Temporary systems, to meet the most immediate needs, will have to be improved or replaced by others as soon as possible, in order to maintain adequate sanitation standards.

In emergency sanitation, act first and improve later.

34. Figure 1 illustrates some considerations to be taken into account in excreta disposal.

Figure 1 – Considerations in excreta disposal

35. The design of sanitary facilities should be governed by cultural factors (discussed above) and by the following considerations:

- i. Flies and smells.** These can be reduced by: installing vent pipes topped with anti-corrosive screens, covering faeces regularly with ash, treating latrines with biological larvicides to control fly larvae, using fly traps, etc.
- ii. Flooded pits or collapsed walls.** These can be avoided by ensuring proper construction including having a raised superstructure, well-built base and mound, pit lining, and good drainage. Sometimes these steps are not taken because of, for instance, financial considerations. However, a large number of latrines built quickly and cheaply will not necessarily solve environmental health problems.
- iii. Life-span.** To dig a pit for excreta is not a very exciting exercise. Normally, the pit should be designed to last two to three years (the capacity of a dry pit should be at least 0.07 cubic metres per person per year). If its dimensions have not been properly calculated, people will have to dig a new pit a short time later. Community members would understandably be reluctant to do this and the site would become covered with pits, some containing un-stabilized faecal matter hazardous to human health. In addition, shortage of space limits the number of latrines which can be built.
- iv. Cleanliness and privacy.** Communal installations are rarely kept clean and become unusable within a very short period of time and encourage transmission of diseases. Therefore family latrines should be preferred whenever possible. Sanitary facilities should preserve users' privacy. Cubicles should be partitioned off within each block. At a family and individual level, socio-cultural considerations often make it compulsory

to build separated units for men and women. Disregard for these simple criteria might result in misuse and abandonment of facilities.

- v. Location.** No contamination by excreta of water resources should occur. Latrines should be at least 30 m from any groundwater source and the bottom of any latrine at least 1.5 m above the water table. Latrines must be close enough to users' shelters to encourage their use (not more than 50 m). They must be far enough from shelters and other buildings to prevent potential smells and pests from bothering or harming the population (at least 6 m from shelters if possible).
36. There are a number of latrine options: once cultural and physical factors have been taken into account, the key factors to consider are low cost, simplicity of construction and ease of maintenance.

Trench latrines

37. Trenches can be used for a few months. If necessary, and where space is available, this solution can continue for longer periods, with new trenches being dug as old ones fill up.

Trench latrines should be dug 1.8 to 2.5 m deep and 75-90 cm wide. Recommended length per 100 persons is 3.5 m.

38. A platform and structure will be needed, providing a seat or squatting hole as appropriate, with lid. When the trench is filled to within 30 cm of the top, it must be covered with soil and compacted. Trench sides must be shored up if there is a danger of collapse.

Pit latrines

39. The pit latrine is the most common excreta disposal system used around the world (see Figure 2a). It has major advantages over a trench latrine. It consists of four basic components: a pit, a base, a squatting slab (or plate) and a superstructure.

40. If used by only one or two (a maximum) families these latrines are usually well maintained. Pit latrines can also be used in clusters as communal facilities.

41. Pit latrines are most suitable in conditions of low to medium population density – up to about 300 persons/hectare – but have been used satisfactorily in areas with twice this density. Space is needed not only for the construction of one pit latrine per family, but also for new pits when the old ones are full. This is an important consideration when pit latrines are used as communal facilities.

42. When the pits are three-quarters full, they must be filled with soil and the superstructure and squatting plate moved to a new pit. Applying layers of ashes as the pit fills will speed up the decomposition of excreta and in time the site can be used again.

43. The pit should be about one metre across and over two metres deep. The rim of the pit should be raised about 15 cm off the ground and ditches should be dug

around the base to divert surface run off. The pit wall should always be reinforced for one metre below ground level to prevent collapse.

44. The basic variety has both odour and insect problems, which can be considerably reduced by making the simple improvements in another version of pit latrine, commonly known as the ventilated improved pit (VIP) latrine (see Figure 2b), and also by adding soil and ashes in the pit and using lids.

Where pit latrines are used, the ventilated improved version should be built whenever possible.

45. In a VIP latrine the vent pipe should be at least 15 cm in diameter, about 2.5 m high, painted black and placed on the sunny side of the latrine for maximum odour and insect control. Blackening the external surface of the vent pipe only marginally increases the venting velocity, but this factor may be of greater importance under "no wind" conditions. The vent pipe must be fitted with an insect proof gauze screen

Figure 2a

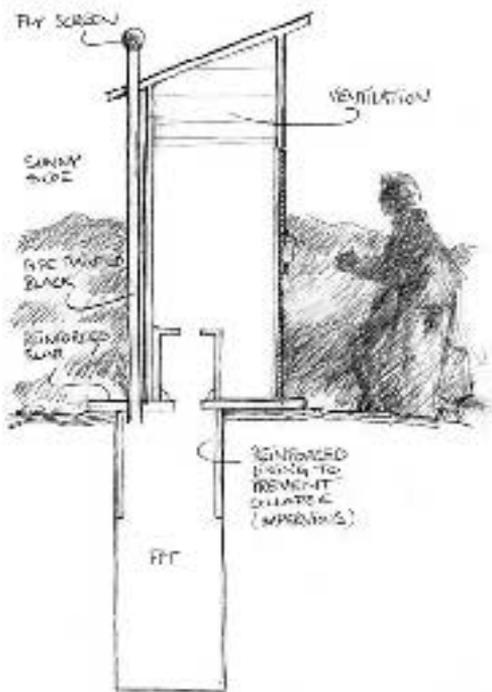

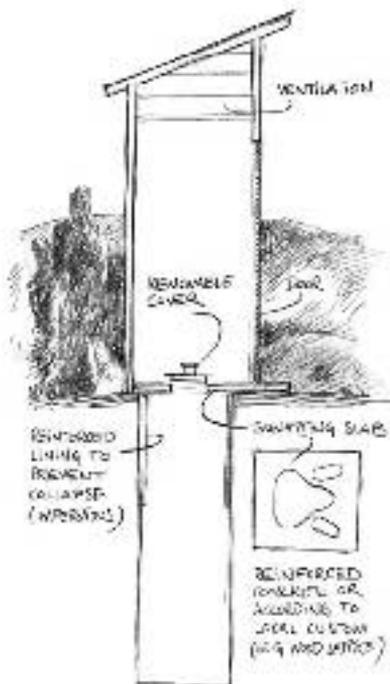

Figure 2b

(so it works as a fly trap). The hole should not be covered by a lid as this impedes the air flow.

Borehole latrines

46. Borehole latrines (Figure 3) are dug with a hand auger or mechanical drill and require a smaller slab than a pit. The borehole is 35-45 cm in diameter and any depth up to 7 metres. The advantage of the borehole latrine is that it can be constructed quickly as a family unit if augers are available. The disadvantages are that the side walls are liable to fouling and fly breeding, they are smellier than vented systems and the risk of ground water contamination is greater because of the depth.

Ventilated improved double pit (VIDP) latrine

47. Raised (or built-up) pits can be used where it is not possible to dig deep pits because the water table is high or excavation is difficult (for example in rocky ground).

48. The VIDP latrine (Figure 4) (also called alternating twin pit ventilated latrine) has two shallow pits, both of which are ventilated by separate vent pipes capped with fly screens. It is a good option in crowded areas which may become even more crowded, as it preserves the space needed for replacement latrines.

49. Two pits give more flexibility. A pit fills up in two to three years, and it should then stand for at least one year. This gives enough time for the night soil to dry out and decompose, so that it can be removed more easily and not pose a health hazard. While the full pit is decomposing, the other pit is used. The two pits must not be used at the same time.

Pour-flush (PF) latrine

50. Pour-flush latrines (Figure 5) are simple in design but need permeable soil for their soak-away. A water seal is made by a U-pipe filled with water below the squatting pan or seat. It is flushed by pouring ~1-3 litres of water into a pit or

Figure 3

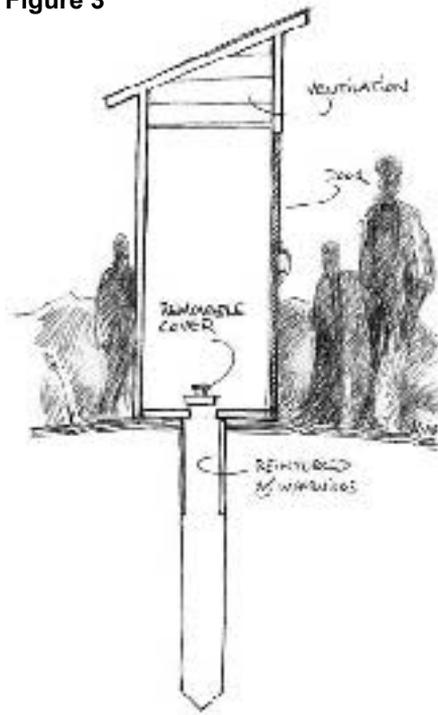

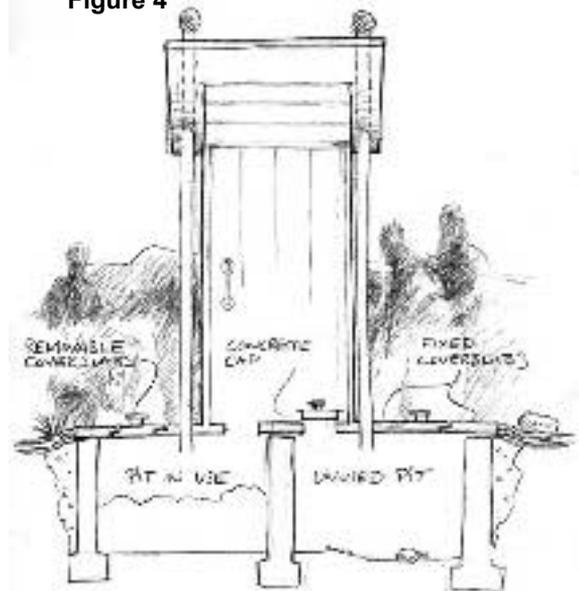

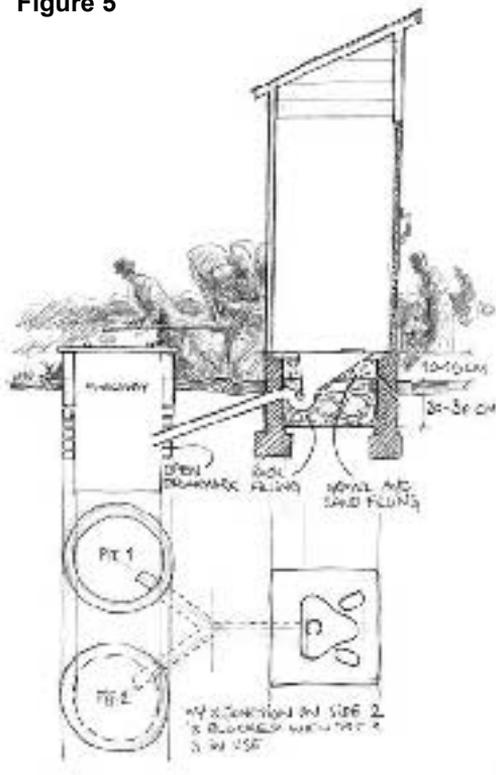

Figure 4

soak-away. This system is suitable where water is used for anal cleaning and where refugees are used to flushing. It is not suitable where paper, stones, corncobs or other solid materials are used for anal cleaning. Pour-flush latrines will be used properly only if water is readily available. A large container with a 3 litre dipper should be made available close by the latrines.

Figure 5

Stabilization ponds

51. Where liquid effluent has to be disposed of in impermeable soil, stabilization (oxidation) ponds are a simple and cheap solution, particularly in hot climates. Various systems are described in the technical references (see references and the TSS technical resources toolkit). If ponds are used they must be securely fenced off.

Solid wastes

- ◆ Improper garbage disposal increases the risk of insect and rodent-borne diseases, and an effective system must be established for the storage, collection and disposal of garbage.
- ◆ Garbage disposal areas must be designated and access to them restricted.
- ◆ Large amounts of dust and/or smoke can damage health. Preventing destruction of vegetation is the best preventative measure against dust.

General considerations

52. The quantity of garbage generated by refugees is often not considered substantial and it therefore tends to be neglected. However, the daily amount of garbage as well as its weight can be significant, in market places in particular.

Uncontrolled accumulation of garbage is unhealthy, and promotes an increase in rodent and insect borne disease.

At the beginning of an emergency hygiene and waste disposal is usually poor, so vermin and other pests including rodents proliferate very rapidly.

53. Food is occasionally distributed to refugees in metal cans. How those are disposed of should be given particular consideration not only for aesthetic reasons but also because of health hazards (injuries to children, potential breeding sites for mosquitoes, etc.). In addition, this kind of garbage is not biodegradable.

54. Medical waste (used syringes and needles, contaminated bandages, laboratory specimens, etc.) generated by health centres, are a hazard. Access to medical sanitary services should be well controlled, and the waste should be treated separately, without delay (see below).

The safe disposal of all medical waste requires particular attention.

Garbage management

55. There should be routines for the storage, collection and disposal of garbage – this will be particularly important in high-density sites.

Storage: metal drums can be used as refuse bins at individual dwelling level. A 200 litre drum cut in half is often used. Bins should have lids if possible and drainage holes in the bottom. A ratio of one container (100 l capacity) per 10 families has proved to be effective. The containers should be placed throughout the site in such a manner so that no dwelling is more than about 15 metres away from one. Using concrete structures as refuse bins is neither economical nor practical: they are difficult to empty properly so rodents are encouraged and garbage is dispersed around the area.

56. Collection and transportation: garbage should be collected from the containers regularly, daily if possible. Camps near a city could benefit from existing refuse-dump services. Using tractors with trailers is expensive and should be considered as a last option and only for large and densely populated camps. Wheelbarrows and/or carts (hand or animal carried) are usually more appropriate.

57. Disposal and treatment:

- i. Sanitary land-filling (also known as controlled tipping) remains the most advisable method. Areas designated for burying garbage should be well away from dwellings, and fenced off.
- ii. Incineration is justified on a small scale and usually only for medical waste. After each incineration, cover the waste with a layer of soil.
- iii. Composting is an attractive option but requires technical knowledge, which may not be available. In addition, garbage must be sorted to produce good compost.

Dust and smoke

58. Large amounts of dust and smoke carried in the air can be harmful to human health by irritating eyes, the respiratory system and skin, and by contaminating food. The best preventive measure for dust is to stop the destruction of vegetation around the site. Dust can also be controlled by spraying roads with water, especially around health facilities and feeding centres, and limiting or even banning traffic. Smoke can be controlled by four categories of interventions that vary in cost and effectiveness (WHO, 2004):

- i. behavioural modifications to reduce exposure (e.g. encouraging mothers to keep their young babies away from the fire);
- ii. household changes to improve ventilation (e.g. increasing the number of window openings, providing gaps between the roof and walls, or moving the stove out of the living area);
- iii. improvements to cooking stoves (e.g. ventilation by flues, hoods or chimneys, or increases in combustion efficiency - nearly all pollutants damaging to health are products of incomplete combustion); and
- iv. interventions to enable people to use higher-quality, lower-emission liquid or gaseous fuels (e.g. petroleum-based kerosene and liquid petroleum gas, or biomass-based alcohol and bio-gas).

Waste water

- ♦ Waste water must be controlled as soon as possible and drainage provided. Any potential contamination of the local environment by waste water must be prevented.

General considerations

59. This aspect of sanitation should always be considered from the beginning. Drainage prevents water from stagnating around water distribution points, and drains the rainfall as well as domestic waste water originating from various

sources (toilets, showers, kitchens, etc.). Other measures to help control vectors include eliminating ponds.

60. Drainage can very quickly become a problem and corrective measures are difficult once shelters and other infrastructure have been built. For example, people often wash next to water sources, causing problems which could be avoided if special separate washing areas are constructed with duckboards or stones and proper drainage.

61. Some families manage to channel waste water away from their homes and use it to irrigate vegetable gardens. Although this should be encouraged it should not disrupt the main drainage system.

62. Good drainage should be a priority at the following locations:

- i. water points (standpipes, taps, hand-pumps);
- ii. sanitary facilities such as showers, toilets and washing areas: waste water from these places should either be used to irrigate vegetable gardens and fruit trees or drained into absorption trenches or soak-away pits;
- iii. shelters: household members usually manage to protect their shelters from runoff waters by means of perimeter drains; it is nevertheless important to ensure that such water is collected and disposed of through main drains; and
- iv. markets and slaughter areas where water will be used to clean slaughter slabs.

Treatment

63. In some circumstances waste water should be treated, for example waste from sewers collecting effluent from pour-flush toilets. Some treatment package units are available on the market; but these are usually expensive, complex, and difficult to operate and maintain.

64. However, there is a broad range of waste water treatment technology. Sanitary engineering professionals should be consulted to select the most appropriate technology.

Pest and vector control

- ◆ Insects and rodents carry and spread diseases and can spoil food supplies.
- ◆ Physical screens are the best immediate measures.
- ◆ Preventive action to eliminate or limit breeding areas and conditions favourable to the vectors is the best long-term solution.
- ◆ Specialist supervision of all chemical measures and local knowledge of resistance is necessary.
- ◆ Avoid chemical control where possible.

General considerations

65. The environment in a refugee emergency is typically favourable to the proliferation of disease-carrying insects and rodents (“vectors”), which can also destroy or spoil large quantities of food.

66. Flies tend to breed in areas where food or human excreta are present; mosquitoes where there is stagnant water; and rats where there is food, garbage and cover. As a result of overcrowding and inadequate personal hygiene, lice, fleas, mites, ticks and other arthropods may also cause health problems. Table 2 gives an indication of common vectors and related diseases.

67. Reducing the numbers of flies, mosquitoes and rodents quickly in an emergency is difficult and physical screens may be the best immediate measure. Over the longer term, the most effective method of controlling insects and rodents is preventive: to improve personal hygiene, sanitation, drainage, garbage disposal and food storage and handling practices and thus make the environment less favourable for

the vectors. Examples of practical measures are the removal of stagnant waste water, regular garbage collection, controlled disposal of excreta and the provision of soap and sufficient water for washing. The recommended monthly supply of soap is 250 g per person per month. The programme should provide for regular inspection and be integrated with other public health measures.

68. The problems should be discussed with the refugees and education given on the significance of vector control. Where solutions unfamiliar to the refugees are employed, these must be carefully explained.

69. Whatever the nature of nuisances and pests, one should avoid having systematic recourse to chemical control by means of pesticides (insecticide, rodenticide, molluscicide, etc.). Such products are costly and toxic to both human beings and the environment. There is a risk of poisoning during transport, storage, handling and, of course, spraying the chemicals. Also, pests can develop resistance to the chemicals.

Physical control

70. Measures described in this chapter to deal with excreta and waste disposal will also help control pests (flies and rodents particularly).

71. The elimination of stagnant water and other breeding and resting sites for mosquitoes through drainage is important and the drainage network must be maintained.

Chemical control

72. Obtaining precise information on chemicals which are used or authorized to be used in the country (i.e. registered list of pesticides if any) should be the first priority.

Insecticide spraying carried out on a routine basis must be avoided, and in any event should be consistent with the rules and procedures in force in the host country.

73. Advice from specialists, particularly medical entomologists, should be sought to minimize the risks and to maximize the impact on target-species. Outdoor spraying must be carried out in enough time before the rains so as to be effective.

74. Staff assigned to such tasks must be trained on technical aspects, informed about health hazards linked with handling and spraying of pesticides, and protected by means of adequate clothing (mask, boots, gloves, etc.).

75. The use of rodenticides should always be adopted in agreement with medical staff. Rats are favoured carriers of vectors (such as fleas) of bubonic plague and murine typhus. When these diseases may be present it is more important to take measures directly against the vectors themselves – i.e. the fleas, rather than the rats – because destroying the rats will simply cause the fleas to leave the dead bodies of the rats and become more of a threat to people.

Table 2 – Vectors which may pose significant health risks

VECTOR	RISKS
Flies	Eye infections (particularly among infants and children), diarrhoeal diseases
Mosquitoes	Malaria, filariasis, dengue, yellow fever, encephalitis
Mites	Scabies, scrub typhus
Lice	Epidemic typhus, relapsing fever
Fleas	Plague (from infected rats), endemic typhus
Ticks	Relapsing fever, spotted fever
Rats	Rat bite fever, leptospirosis, salmonellosis, Lassa fever

76. The body louse is the only proven vector of louse-borne epidemic typhus and relapsing fever. If there is a serious increase in body louse infestation, quick action is required by properly trained personnel. This generally involves dusting individuals' inner clothing and bedding with an insecticide or the use of clothing fumigants. There is widespread resistance in lice to some insecticides and expert local advice must be sought.

General hygiene

- ◆ Sanitary engineering must be complemented with sufficient hygiene promotion work with adequate community participation.

77. Habitat hygiene, food hygiene and personal hygiene, while being integral parts of sanitation, are also related to wider health education and community issues and so it is worth constantly repeating that the most effective manner to sustain effective sanitation activities is to complement them with visible and concrete participatory hygiene promotion activities on the ground.

78. Gender-balanced community participation in sanitation activities is a key to successful implementation, however, to make participation work in practice, the community members must have the necessary resources – human, institutional and material – to enable them to take on their responsibilities.

79. Activities to improve living conditions should take place at all levels – site, community, family and individual – and not be restricted to just one level. Elementary rules of hygiene should be observed by everyone.

80. There are three essential steps to improve living conditions:

- Avoid overcrowding and overpopulation, which increase transmission (through direct or indirect contact) of diseases brought about by vectors such as fleas and lice.

- Reduce faecal/oral transmission risks by ensuring systematic hand-washing with soap (or ash and water) before cooking and eating and feeding infants and after latrine use or handling of babies' faeces. Washing the face everyday helps to prevent trachoma and other eye infections.

- Encourage personal hygiene including clean clothes by providing amenities such as showers and laundering areas and basins. This will also reduce contact with water bodies that have been polluted by excreta and urine, reducing the risk of disease including bilharziasis (schistosomiasis).

81. Communication of key messages on the importance of hygiene will have no effect if they do not reach or are not accepted by the affected community. It is extremely important that messages be discussed with vulnerable groups, especially women and children. The key steps to remember in conveying these messages are (adapted from UNICEF, 2005):

- i. Establish and train a team that is familiar with local practices and social structures.
- ii. Use the local language or pictograms if possible.
- iii. Keep messages clear and simple.
- iv. Work through existing social structures.
- v. Consider existing culture, practices and gender roles.
- vi. Reach people during times of emergency at clinics, feeding centres, distribution centres, water collection points, etc.
- vii. Use a variety of ways of reaching people that can include megaphones, radio, broadcasts, announcements, meetings, posters, home visits, large and small group discussions, local newspapers and community newsletters, as well as street theatre, slides, films, video presentations, games, drama, songs, role-play and simulation, if possible and appropriate.

viii. It is important not to blame the community for previous poor hygiene practices.

Disposal of the dead

- ◆ Suitable arrangements for disposal of the dead are required from the start of an emergency.
- ◆ Action should be coordinated with the national authorities.
- ◆ Burial is the simplest and best method where acceptable and physically possible. Arrangements should be made to allow traditional rituals.
- ◆ Before burial or cremation, bodies must be identified and the identifications recorded.

82. Suitable arrangements for the disposal of the dead are required from the start of a refugee emergency. The mortality rate may well be higher than under "normal" conditions. The authorities should be contacted from the outset to ensure compliance with national procedures, and for assistance as necessary.

83. Dead bodies present a negligible health risk unless the cause of death was typhus or plague (when they may be infested with infected lice or fleas) or cholera. Funerals for persons dying from cholera should be held quickly, near the place of death. Efforts should always be made to restrict funeral gatherings of persons dying from any of these three diseases, and to restrict feasting and ritual washing of the dead, by intensive health education or by legislation, as appropriate.

84. Health considerations provide no justification for cremation, for which sufficient fuel may often not be available. Whenever possible, the customary method of disposal should be used, and the traditional practices and ritual should be allowed. Material needs, for example for shrouds, should be met. The necessary space for burial will need to be taken into account at the site planning stage, particularly in crowded conditions.

85. Before burial or cremation, bodies must be identified and the identification recorded, and, if possible, cause of death recorded. This is particularly important for the control, registration and tracing of disease. If the whereabouts of relatives are known, the most immediate relation should be notified; and steps must be taken to assure the care of minors who, as the result of a death, are left without an adult to look after them.

86. When handling corpses, workers should protect themselves with gloves, face masks, boots and overalls. The workers should wash thoroughly with soap and water afterwards. Although the HIV virus cannot survive for long in a dead body, care should be taken with bodily fluids.

Potential environmental impacts

87. So as not to cause irreversible or long-term damage to a location or those who are residing in it, listed below are potential environmental impacts, related to sanitation, which should be avoided during an emergency operation:

- i. Poor control of excreta can lead to pollution of surface water as well as groundwater. This can result in the spread of disease to a much greater population than that which caused the pollution, with resultant human and financial costs.
- ii. Poor management of water distribution points and waste water (i.e. if it is allowed to collect and stand in puddles) can provide breeding grounds for disease carrying vectors.
- iii. Inadequate provision of garbage storage near point of use, collection, disposal and stabilization, or reuse and recycling, could lead to contamination of the environment and the potential spread of disease by humans, animals, insects or vermin.
- iv. Dust carried in the air can be irritating or harmful to the eyes, respiratory system or skin, can contaminate food

and damage sensitive camp equipment. Under some conditions, dust can be heavily contaminated with faecal matter and may be a direct cause of disease.

- v. Smoke generated as a result of deficient cooking practice and wrong design of shelter can be a concern, as it is hazardous to human health and other local biological entities.
- vi. Insects and rodents are primary vectors for the spread of disease within the refugee camp and between the refugee and local population. These pests can also contaminate food supplies, either before or after distribution to refugees.
- vii. Some of the measures used to control pests (i.e. chemical applications) can be toxic to humans (both beneficiaries and workers), to non-target organisms and to the environment (regarding biodegradability of chemicals).

Situation

In emergencies, food and nutritional security is often severely threatened and urgent actions are required to ensure adequate provision and intake of food. Refugees will need partial or full food support to meet basic energy and protein requirements, as well as micronutrients. Nutritional rehabilitation will be required for those who are already malnourished.

Objective

To provide the refugees with sufficient quality and quantity of appropriate foods to reaffirm the fundamental right to adequate food in order to maintain their well-being, nutritional status and eliminate protection risks.

Principles of response

- Based on the Memorandum of Understanding (MOU) 2002 between UNHCR and the World Food Programme (WFP), ensure close coordination with WFP and other agencies in relation to joint assessment and consequently the provision of food and non-food needs.
- Every effort should be made to ensure the food-aid items meet nutritional requirements and are culturally acceptable to the population of concern to UNHCR.
- Measures to meet food supply should be adequate to cover the overall nutrition needs of all population sub-groups affected in terms of quantity, quality and safety.
- The food distribution system should involve refugee participation, especially women, and provide non-food related needs, such as cooking facilities and fuel.
- Promote breastfeeding and pay particular attention to adequate complementary feeding for older infants and young children, women and those with specific needs who are prone to malnutrition.

- Maintain close coordination with the other vital sectors (health, water, environmental sanitation, HIV and AIDS etc.) and aim for maximum integration with existing services.
- Ensure the active involvement of a nutritionist.
- Every effort should be made to provide cereal in fortified flour form instead of grain; if wholegrain is provided, milling facilities should be made available.

Action

- Ensure an initial nutrition, food and non-food needs assessment is carried out.
- Once the initial emergency phase is stabilized, conduct a nutrition survey to establish the nutrition status of the population.
- Ensure the availability of appropriate food and non-food items such as cooking fuel and utensils, including the necessary transport and storage.
- Organize a general feeding programme for all refugees and, based on the nutritional status, organize necessary targeted feeding programmes to meet specific needs such as community-based care for the severely malnourished, supplementary feeding for pregnant and lactating women as well as the moderately malnourished.
- Arrange community education on use of food-aid commodities and promote appropriate infant and young child feeding practices and behavioural changes.
- Provide fortified food items including blended food to meet the general populations micronutrient needs (if the population is fully dependent on food aid).
- Review general food ration composition taking into consideration: environmental temperature, nutritional status, demographic distribution, level of physical activity and self-reliance opportunities.
- Enhance outreach activities and nutrition monitoring.

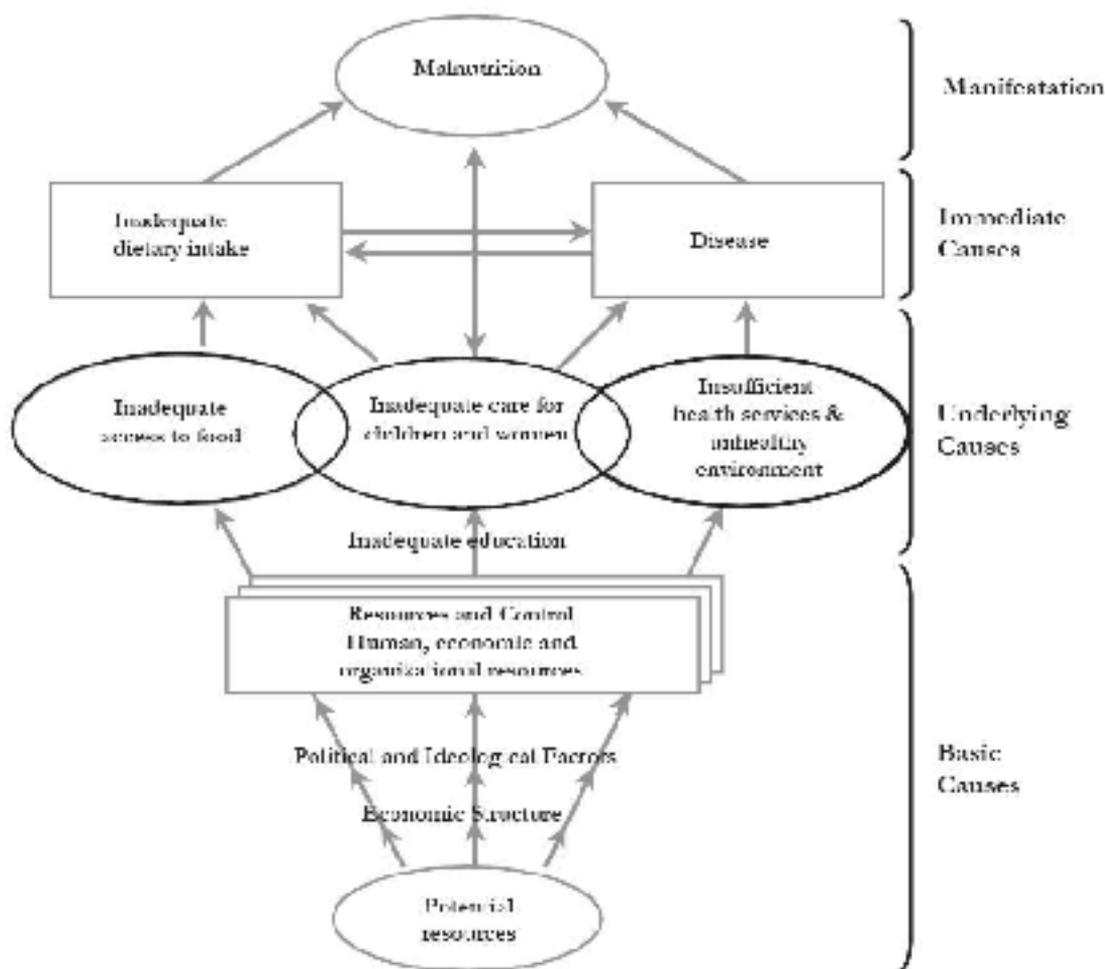

Introduction

1. In an emergency, refugees and people of concern to UNHCR may be completely dependent on the provision of external food sources. An initial assessment of the beneficiary numbers, health and nutritional situation, food security and other related information (e.g morbidity, micronutrient deficiencies) is fundamental for calculating food needs and to make necessary adjustments to the initial planning figure. Continuous monitoring will ensure that the programmes can be adjusted in order to reflect changing conditions.

2. The causes of malnutrition are often complex and multi-sectoral (see Figure 1). Therefore, examining the causes of malnutrition and possibilities for response is essential. Coordinating the food and nutrition programmes with health, water, environment, food security, gender roles and other vital sectors is necessary for informing programme strategies.

3. Assistance must be appropriate to the nutritional needs of the refugees and be culturally acceptable. Infant feeding policies require particular attention.

Figure 1 – The complex causes of malnutrition

4. Certain groups are more at risk of malnutrition than others, such as infants and young children, pregnant and lactating women, the sick and elderly. Special action is required to identify the malnourished and persons with specific needs to meet their additional requirements.

5. If the refugees are already suffering the effects of severe food shortage, immediate action must be taken to provide food available locally which is acceptable to the refugees. However, acceptable food might not be available locally and time may be needed to develop the full response set out in this chapter.

6. This chapter should be read in conjunction with:

- i. Food and Nutrition Needs in Emergencies (UNHCR, UNICEF, WFP and WHO, 2002).
- ii. Sphere Handbook, (2004).
- iii. Management of Nutrition in Major Emergencies (WHO, 2000).
- iv. The UNHCR/WFP Joint Assessment Guidelines (UNHCR/WFP, 2004).

Organization of food support

- ◆ The World Food Programme (WFP), the food aid arm of the United Nations system, shares with UNHCR responsibility for meeting the food and nutritional needs of refugees.
- ◆ The Memorandum of Understanding (MOU) signed between WFP and UNHCR establishes the division of responsibilities and coordination mechanisms for refugee returnee and internally displaced persons feeding operations.
- ◆ The aim of the food programme is to ensure the restoration and maintenance of sound nutritional status through a food ration that meets the assessed requirements and is nutritionally balanced, palatable and culturally acceptable.
- ◆ In most refugee emergencies a

UNHCR food and nutrition coordinator should be appointed, who will have overall responsibility for coordination of all aspects of the food and nutrition programme with WFP.

- ◆ The refugees, and in particular refugee women, must be involved in the organization of these programmes.
- ◆ Simple nutrition education is an integral part of effective food and nutrition support.

WFP/UNHCR Cooperation Joint objectives¹

7. The ultimate goal of the partnership between UNHCR and WFP is to ensure that food security and the related needs of the population that UNHCR is mandated to protect and assist are adequately addressed. Food security is defined as access by all people at all times to enough food needed for an active and healthy life.

8. On the basis of the above principle and through the timely provision of the right quantity of the right food and of related non-food items, UNHCR and WFP seek to contribute to:

- i. the restoration and/or maintenance of a sound nutritional status through a food basket that meets the assessed requirements of the different population groups and that is nutritionally balanced and culturally acceptable, as jointly agreed upon and specified in Joint Plans of Action; and
- ii. the promotion of the highest possible level of self-reliance among the beneficiaries, through the implementation of appropriate programmes to develop food production or income-generation, which will facilitate a progressive shift from general relief food distribution towards more targeted assistance and sustainable development-oriented activities.

¹ WFP/HCR MOU 2002, paragraph 2.1

9. A revised Memorandum of Understanding (MOU) (see Appendix 1) signed between UNHCR and WFP in July 2002 recognizes the importance of examining both food and non-food aspects relevant to food security, and of capitalizing on opportunities to increase self-reliance. Under the terms of the MOU, WFP meets the emergency food needs of refugees (including asylum seekers), returnees, and, in specific situations, internally displaced persons, and provides associated logistical support. The terms of the MOU apply when the beneficiaries in the country of asylum number more than 5,000, irrespective of their country of origin or their location within the country of asylum, unless otherwise determined and agreed upon by WFP and UNHCR on a case-by-case basis. UNHCR and WFP will separately meet the food needs of persons of their concern that lie outside the scope of the MOU.

10. Within the scope of the MOU, WFP has the lead responsibility for mobilizing the following food commodities (whether for general or selective feeding programmes) and the resources to deliver them.

WFP resourced commodities include:

- i. Cereals
- ii. Edible oils
- iii. Pulses (or other sources of protein)
- iv. Blended foods
- v. Iodized salt
- vi. Sugar
- vii. Occasionally high energy biscuits

11. WFP is responsible for mobilizing the necessary resources for milling and provide milling facilities for the beneficiaries where feasible. Women will be particularly encouraged to play a key role in the management of the milling services. WFP is also responsible for the timely transport and storage of the commodities at agreed extended delivery points (EDPs), and for the operation and management of the EDPs. Unless otherwise agreed,

UNHCR is responsible for the transportation of all commodities from the EDP to the final destination and for final distribution to beneficiaries. In targeted operations, UNHCR and WFP may jointly agree to transfer the responsibility for general distribution to WFP.

12. Under the MOU, UNHCR is responsible for mobilizing and transporting complementary food commodities and for the provision of the necessary micronutrients (vitamins and minerals) when they cannot be met through the ration.

UNHCR resourced commodities include:

- i. Complementary foods (including fresh foods)
- ii. Therapeutic foods
- iii. Occasionally spices, other condiments, tea
- iv. Related non-food items

13. UNHCR, WFP and their partners have developed a common set of guidelines² for estimating food and nutritional needs in emergencies and in selective feeding programmes.³ These guidelines should be used to assess the food needs for both the general and selective feeding programmes.

Joint assessment and planning

14. Contingency planning: UNHCR and WFP will establish early-warning systems, undertake contingency planning and maintain contingency plans for countries where this is deemed appropriate. Each will seek to ensure joint participation of others in the process, and share relevant contingency plans.

15. Joint plan of action (JPA): At the field level, a JPA setting out the agreed upon objectives, the implementation ar-

² *Food and Nutrition Needs in Emergencies, UNHCR-UNICEF-WFP-WHO, WHO 2002.*

³ *UNHCR/WFP Guidelines for Selective Feeding Programmes in Emergency Situations, WFP-UNHCR, 1999.*

rangements for operations and the recommendations of joint assessments shall be developed at the onset of each joint operation and updated regularly, at least annually. The JPA should include strategy, analysis and monitoring of refugee situations and repatriation plans where applicable. In line with the agreed Inter-Agency Standing Committee (IASC) Policy Package and subject to further agreements, the JPA should include any assistance provided to officially recognized internally displaced persons.

16. Joint assessment mission (JAM):⁴ In consultation with the relevant government authorities, donor representatives, operational partners, beneficiaries, and experts as appropriate, UNHCR and WFP will jointly assess the overall food aid and related non-food requirements. Both agencies will agree on the modalities of food assistance, the composition of the food basket, ration size, duration of assistance, and related non-food inputs. Special consideration will be given to the needs and views of women, children and vulnerable groups.

17. In a major new emergency, the initial assessment to determine the number of beneficiaries and the most urgent food and non-food needs will normally be carried out within the framework of the emergency response being mobilized by both agencies. This would involve the participation of emergency response teams from UNHCR, WFP and prospective operational partners, as appropriate.

18. Joint assessment activities include the following as part of an integrated process:

- initial assessment (normally starting with a rapid initial investigation) at the onset of a refugee emergency/influx;

- periodic reviews/re-assessments of an ongoing operation;
- in-depth assessments of food security/self-reliance;
- assessment in preparation for repatriation and reintegration;
- nutrition surveys and surveillance; and
- monitoring on an ongoing basis.

The whole process, including the sequence of and relationships among the various activities, in a country of asylum is shown in Figure 2 (which also shows the interaction with UNHCR's situation analysis and participatory planning processes, where implemented).⁵

Initial assessment

19. In most cases, when new refugees arrive in significant numbers and are in need of prompt assistance, the assessment will be undertaken in two phases:

1. A **rapid initial investigation** within the first few days (e.g. 2-3 days) to provide a basis for initiating the immediate delivery and distribution of assistance, and submitting preliminary requests to donors.
2. A **detailed initial assessment** following on directly from the rapid assessment and completed within a few weeks (e.g. 2-3 weeks) to provide a basis for the design of assistance programmes with operational plans and budgets for at least 6 months.

20. In some cases, refugees arrive progressively with some possessions and supplies, and for an initial period take care of themselves or are taken care of by local authorities, local communities and/or NGOs already working in the area. In such cases, the government request for international assistance may be delayed and a joint UNHCR-WFP assessment may be organized only several weeks, or

⁴ UNHCR/WFP Joint Assessment Guidelines (with Tools and Resource Materials), UNHCR-WFP, June 2004.

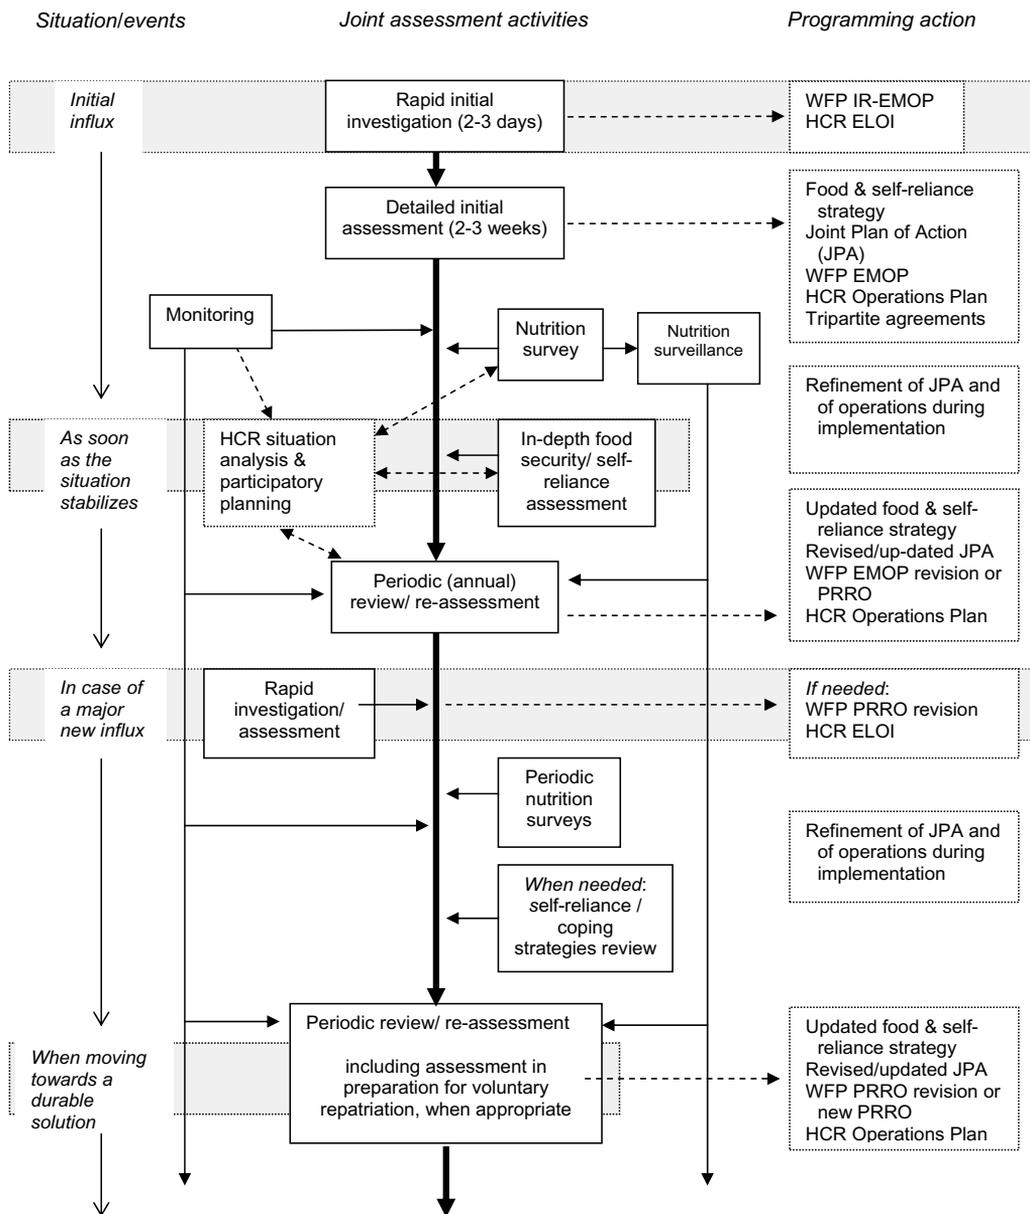

⁵ See *The UNHCR Tool For Participatory Assessment in Operations*, 2006.

even months, after the initial influx.⁶ In such cases, a detailed initial assessment may be undertaken without a preliminary rapid investigation phase, if needs are not urgent. However, the 2-phase process is still needed in many cases.

21. A new rapid investigation and follow-on detailed assessment may be required in case of a major new influx in an on-

going operation. If needs are urgent and there are no partners or other staff in the locality able to arrange to acquire supplies locally and/or receive supplies sent from elsewhere, and to organize initial distributions, members of the assessment team may have to fulfil these responsibilities while also continuing with the assessment.

Figure 2 - Typical sequence of joint assessment activities

⁶ This was the case for the Sudanese refugees who arrived in Chad in 2003, for example.

Typical objectives for an initial assessment

Phase-1: Rapid initial investigation (2-3 days)

- To determine whether the refugees need immediate food assistance and/or other forms of assistance to prepare food and ensure their survival and well-being in the short term and, if so, to define (for the next 15-30 days): the number of people to be provided for, the types and quantities of food and related assistance required, how that assistance can be delivered, and how and by whom it should be distributed.
- To begin compiling data that will be required for operational planning, and enable preliminary information to be provided to donors concerning the scale of the assistance that could be required in the coming weeks and months.
- To identify the localities and priority topics on which follow-on more detailed assessment should focus.
- To identify factors that could positively or negatively influence possibilities for self-reliance (e.g. location, proximity of markets, access to water, fuel-wood, etc.), bring constraints to the notice of the authorities who are determining the locations for refugee camps and settlements.

Phase-2: Detailed initial assessment (2-3 weeks)

- To determine what measures are necessary and what assistance is required to ensure that the refugees:
 - (i) have access to food that is adequate in quantity and quality to meet their nutritional needs, and to related non-food supplies, services and protection to maintain (or restore) nutritional health in the next 6-12 months; and
 - (ii) progressively achieve the maximum possible level of sustainable

self-reliance pending a durable solution (avoiding damaging or undesirable survival strategies).

- To define the types of food and related non-food assistance required; the number of people to be provided for; how the food and related assistance should be delivered, targeted and distributed; how initial assistance to self-reliance should be provided.
- To assess the logistic (transport, storage and handling) means and management capacities available to receive imported supplies, acquire in-country supplies, deliver supplies to the refugee sites, and maintain operational reserve stocks, with proper accountability and minimum losses throughout the supply chain, including any logistic constraints to be considered in the design of the overall programme.
- To determine whether immediate measures are necessary and, if so, what assistance is required to: (i) ensure that the food security of the local host population and the natural resource base of the area are not undermined by the self-reliance and fuel-wood collection activities of the refugees; and (ii) address any acute food shortages or malnutrition among the local population.
- To identify and assess the resources and capacities of potential implementing partners to undertake food distribution, self-reliance and monitoring activities.
- To assemble the data required for operational planning and budgeting, and to initiate implementation: this includes data on key indicators necessary to establish a baseline against which programme performance can be measured, to the extent possible.
- To enable specific, credible project proposals (for the next 6-12 months) to be elaborated and submitted to donors for funding.

22. UNHCR and WFP should also consider the food security situation of communities surrounding refugee camps and of individuals and families hosting refugees, and address these needs as appropriate.

Coordination

23. A UNHCR coordinator should be appointed as focal point for food and nutritional issues. In smaller operations, either the programme officer or the logistics officer could be appointed as food coordinator. If technical expertise is not available initially within UNHCR or WFP then assistance should be sought from government nutritionists, UN agencies or NGOs.

24. The food and nutrition coordinator's responsibilities are to establish standard procedures, including procedures for general food distribution, coordinate feeding programmes, monitor and evaluate the feeding programmes, and ensure close coordination and integration with community services, health and other sectors. The coordinator should act as the focal point within UNHCR for coordination with WFP and NGO's. Where the food coordinator is not her/himself a nutrition specialist, an experienced nutritionist will also be needed to provide the food coordinator with the necessary technical advice.

Role of refugees and nutrition education

25. The refugees must be involved from the start in the organization and management of the feeding programmes. Special training will be necessary for refugees.

26. The provision of simple outreach nutrition education and skills for the refugees is necessary when unfamiliar foods or new

methods of cooking cannot be avoided. This should be organized in conjunction with providing skills on appropriate infant feeding, community-based therapeutic care, diarrhoea treatment, basic food hygiene and preparation for maximum nutritional benefit.

Related non-food needs and other programming elements

27. Related non-food needs include whatever non-food items, services or other measures may be needed to:

- ♦ ensure that refugees are able to prepare and cook their food – e.g. utensils, stoves, cooking fuel, water (for food preparation and cooking), grinding/milling facilities (when needed);
- ♦ address other factors that could undermine nutritional status and well-being – e.g. shelter, clothing, blankets, water quantity (for hygiene purposes), water quality (for drinking), sanitation, feeding practices, communicable diseases and psychosocial distress, access to education and health care including essential drugs, personal (in)security; and
- ♦ enhance sustainable self-reliance – e.g. the materials, facilities, technical assistance, training, administrative measures, etc.

28. Joint assessment teams must consider all of the above. This will be done largely on the basis of secondary data, especially the reports of surveys, assessments, ongoing monitoring, and evaluations conducted by competent organizations, but will also include discussions with key informants and groups of refugees as well as the team's own observations during visits to refugee sites.

What is expected of joint UNHCR-WFP assessment teams in relation to non-food needs and other programming elements

<i>Topic</i>	<i>Approach</i>
Requirements to store food and water, and to prepare and cook food: <ul style="list-style-type: none"> ➤ <i>Utensils</i> ➤ <i>Stoves</i> ➤ <i>Cooking fuel</i> ➤ <i>Water</i> ➤ <i>Grinding/milling facilities (where needed)</i> 	<ul style="list-style-type: none"> □ Examine available secondary data on what is available to households and compare with the standards below. □ Observe food preparation and cooking at household level to confirm the plausibility of the available data. □ Discuss with refugees in focus groups. □ If needed, undertake (or organize) a survey to gather reliable up-to-date data. □ Specify what (if anything) needs to be done to ensure that all households are able to adequately prepare and cook their food.
Factors that affect nutritional status and well-being: <ul style="list-style-type: none"> ➤ <i>Shelter, clothing, blankets, water quantity, water quality, sanitation</i> ➤ <i>Feeding practices</i> ➤ <i>Prevalence of diarrhoea, communicable diseases and psychosocial distress, previously existing micronutrient deficiencies</i> ➤ <i>Access to education, health care and essential drugs</i> ➤ <i>Personal (in)security</i> 	<ul style="list-style-type: none"> □ Examine available secondary data on the current situation and compare with the standards below. □ Review the conclusions and recommendations of relevant assessment, monitoring and evaluation reports. □ Observe conditions and practices and discuss with refugee groups, public health workers, nutritionists and NGOs to confirm or update the data and recommendations for action; seek clarification if data are not consistent with your own observations. □ Exceptionally, if no information is yet available from a competent source, gather whatever information you can during your visits, and try to arrange for competent bodies to undertake professional assessments as soon as possible. □ Discuss with refugees in focus groups. □ Summarize available data and the implications for nutritional status and general well-being, including any specifically-identified causes of malnutrition. □ Summarize current recommendations, the status of action on them, and the additional actions required to protect health and nutritional status.
Requirements for self-reliance: <ul style="list-style-type: none"> ➤ <i>Materials</i> ➤ <i>Facilities</i> ➤ <i>Technical assistance</i> ➤ <i>Training</i> ➤ <i>Administrative measures</i> 	<ul style="list-style-type: none"> □ Review the findings, conclusions and recommendations of relevant assessment, monitoring and evaluation reports. □ Observe self-reliance activities and discuss with refugee groups, development workers and agencies the effectiveness of activities to enhance self-reliance and confirm or update recommendations for action. □ If needed, organize (or recommend) an in-depth assessment of risks and possibilities for self-reliance (see chapter 5). □ Specify the actions (if any) that need to be taken to enhance self-reliance at household and community levels.

Cooking fuel

29. Particular attention must be paid to the provision of cooking fuel and the control and management of the natural resources in the vicinity of the camp. Failure to deal with this can quickly lead to destruction of the vegetation in and around the site causing lasting damage to the environment, with direct effects on the health and

well-being of refugees and local people and friction with the local population. Fuel needs and consumption vary considerably⁷. Factors affecting the use of fuel include:

- i. ***Food preparation, cooking techniques, fuel type and preparation.*** Soaking beans prior to cooking, ensuring lids are used on pots, ensuring

wood is dry and chopped, and that fires are put out after cooking – all these make considerable fuel savings and can be incorporated into environmental awareness raising and training programmes.

- ii. **Type of stove.** It may be possible to use local technology to modify existing types of wood or charcoal burning stoves in order to make them more fuel efficient. Simple improvements and local technologies are best. Note that the social and economic implications of a new technology are usually more important in determining whether it will be adopted than the effectiveness of the technology itself. The promotion and use of improved stoves must closely involve the refugees.
- iii. **Type of food.** Freshly harvested foods take less cooking time, also using milled rather than whole grain and using pre-cooked food make considerable fuel savings. The environmental implications of the food basket need to be taken into account with WFP.
- iv. **Availability (or “price”)** of fuel itself. This is often the most significant factor affecting per capita fuel consumption. The provision of fuel wood and managing and controlling the use of natural resources around a refugee camp is discussed further in chapter 12 on site planning.

Nutrition assessments⁸

- ♦ The nutrition assessment should be carried out as soon as possible by an experienced nutritionist.
- ♦ A nutrition survey should include anthropometric measurements, morbidity as well as food security information.

- ♦ Regular nutrition assessment is necessary both to monitor the nutrition status of the community including identifying individuals who have specific needs.
- ♦ Information must be gathered on infant feeding practices, micronutrient deficiencies, morbidity and mortality as well as malnutrition rates, in order to understand the underlying causes of malnutrition.

Introduction

30. An initial assessment of the nutrition status of the refugees should be made as soon as possible and should be carried out by an experienced nutritionist. The extent of malnutrition has important implications for what form the emergency response will take, and will enable early decisions to be taken on the components of the rations and on the requirement for any additional selective feeding programmes.

31. The initial nutritional assessment should be followed by regular nutrition surveys under specialist supervision to monitor the nutrition situation of the population as a whole.

32. Where results of the initial assessment or later surveys indicate a need for selective feeding programmes, individuals will need to be identified and registered for these programmes. Their individual progress should then be monitored regularly.

33. The initial nutrition assessment and the periodic nutrition surveys of the population as a whole should be done by measuring the weight and height of a ran-

⁷ Average fuel-wood consumption per person per day in different refugee camps has varied from 0.9kg to 4kg.

⁸ WHO released new growth standards in April 2006 which are available at www.who.int/childgrowth. This is accompanied by the release of software which allows calculation of the prevalence of malnutrition using the NCHS/WHO reference data and the WHO 2006 growth standards. UNHCR is in the process of assessing programming implications of these new standards. For more information contact HQTS01@unhcr.org

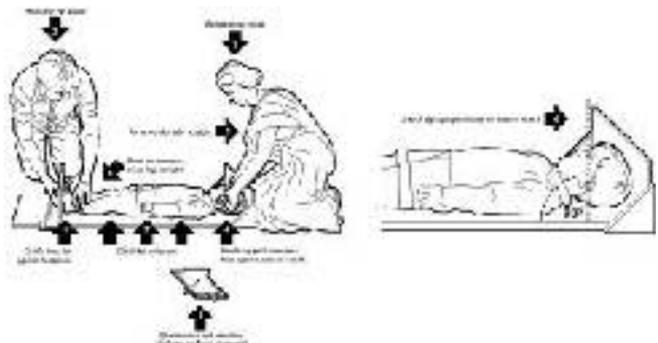

dom sample of the child population (as explained below). Initially such surveys should be carried out every two to three months. When conditions have stabilized, a survey once every six to twelve months is sufficient.

34. In addition, a nutrition surveillance and monitoring system should be established. Any change or trend in nutritional status can thus be detected and appropriate adjustments made in the assistance programmes.

There is a serious nutritional emergency where the acute malnutrition rate is either 15% or more, or 10-14% with aggravating factors (e.g. high prevalence of respiratory infection and diarrhoeal diseases). Such a situation requires urgent action. It is important to try to get information on trends in malnutrition rates which would give a better picture of the situation (deteriorating rapidly but still low might require some rapid action even if the trigger level has not been reached). Please see Appendix 1: Key Emergency Indicators.

Recognizing and measuring malnutrition

35. Malnutrition can be recognized by clinical signs (such as nutritional oedema or micronutrient deficiencies) and by anthropometry (body measurements). Measurements such as weight-for-height are used as an objective assessment of nutritional status, which quantifies the nutritional situation at one point in time, and allows comparisons over time.

36. Mortality and morbidity information will assist in understanding the underlying causes of malnutrition and the relationship characteristic between malnutrition and mortality to determine the focus on specific interventions. Child mortality rates are particularly important.

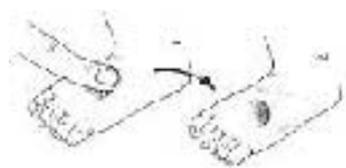

37. **Weight-for-height in children**, is the best indicator to assess and monitor nutritional status of populations. The actual weight of a child is calculated as a percentage of the standard weight for a normal child of that height, or as a Z score. Z-scores are the standard and the preferred mode of presenting anthropometric indicators in nutrition surveys. Percentage of the median can be presented in addition to Z-scores in the survey report if there is a specific need for this alternative expression (such as when results will be used as a programmatic tool in selective feeding programs). It is usually young children aged between 6 and 59 months who are measured in nutrition surveys, because young children are the first to show signs of malnutrition in times of food shortage and are the most severely affected. When the ages of children are not known, 65 cm and 110 cm height are used as the cut off points instead of 6 and 59 months.

Z-score: The deviation of an individual's values from the mean value of a reference population taking into consideration the standard deviation of the reference distribution. Z-score is used in analysing continuous variables such as the height and weight of a sample of the population in a nutrition survey.

38. **Body mass index** (BMI) ($\text{Weight in kg}/(\text{Height in m})^2$), is used for assessing the nutritional status of adults by assessing the degree of thinness (see table 1).

39. **Oedema** is an essential nutrition indicator and may indicate kwashiorkor (see Annex 4). Oedema is characterized by swelling in both feet due to an abnormal accumulation of fluid in intercellular spaces of the body.

Children with nutritional oedema should always be classified as having severe acute malnutrition regardless of their weight-for-height or height-for-age Z-score or percentage of the median.

40. **Mid-upper arm circumference.** The mid-upper arm circumference (MUAC) is measured on the left arm, at the mid-point between elbow and shoulder. MUAC is not recommended to measure the prevalence of malnutrition in young children in a population. MUAC is more suitable as a screening tool for determining admission to selective feeding programmes and for rapid assessments. If MUAC is included in a population-based nutrition survey of children, it is essential that weight-for-height indices are also included.

41. However, it should be noted that:

- i. In addition to WFH <70% of the median and bilateral oedema, MUAC <110 mm is an independent criterion for admission to a therapeutic feeding program for children 6-59 months old.
- ii. In infants less than 6 months old, there are no clear anthropometric criteria for admission to a therapeutic feeding program and it is recommended that “severe visible wasting” be used until further studies are undertaken to develop criteria.
- iii. MUAC is a simple and practical tool which can be used by minimally trained workers for detecting the severely malnourished in the community and for achieving high program coverage.

42. **Weight-for-age** and **height-for-age** are not such useful assessment indicators in emergencies as age is often difficult to determine. This can be used for growth monitoring of individual children, and partially in assessing long-term (chronic) malnutrition.

Moderate and severe malnutrition

43. The standard cut-off points to describe malnutrition are:

- i. between 70% and 80% weight-for-height of the median NCHS/WHO reference values (or between -3 and -2 Z scores) for moderately malnourished; and
- ii. less than 70% weight-for-height of the median NCHS/WHO reference values (or < -3 Z scores) for severely malnourished.

Table 1: Summary of key malnutrition indicators*

Malnutrition	Children under 5 years old			Adults BMI
	Weight-for- height (W/H)% of median NCHS/WHO reference values ⁹	Weight-for- height (W/H) in Z scores or SD's of the median NCHS/WHO reference values ¹⁰	MUAC	
Moderate	70% to 79%	-3 to -2 Z scores	110 mm to <125 mm	16 - <18
Severe	less than 70% or oedema	less than -3 Z scores or oedema	< 110 mm, oedema	less than 16

* Results expressed by different methods are not directly comparable

General feeding programme

Response to food and nutritional needs

- ◆ A mean figure of 2,100 kcal per person per day is used as the planning figure for calculating the food energy requirements of refugees in emergencies in developing countries, except when the population pyramid is not 'normal', e.g. when there is an unusually high number of adolescents amongst the refugees, or only women and young children¹¹
- ◆ Everyone in the population, irrespective of age or sex, should receive exactly the same general ration (i.e. same quantity and type of foods).
- ◆ The food basket should be nutritionally balanced and suitable for children and other groups at risk.
- ◆ Every effort should be made to provide familiar foodstuffs and maintain traditional food habits.
- ◆ The level of fat intake should provide at least 17% of the dietary energy of the ration. Protein intake should provide at least 10-12% of the total energy.
- ◆ The diet must meet essential vitamin and mineral requirements.

⁹ Percentage below the median "reference" weight-for-height values.

¹⁰ Standard deviations (SDs, or Z score) below the median "reference" weight-for-height values.

¹¹ Food and Nutrition Needs in Emergencies, UNHCR, UNICEF, WFP, WHO, 2003.

- ◆ Particular attention should be paid to locally prevalent micronutrient deficiencies.

General food ration

44. To design and analyse a general food ration, it is advised to use the interactive tool NutVal. Jointly updated by UNHCR, WFP and the Institute of Child Health, London, *NutVal* is a spreadsheet application for the planning, calculation and monitoring of the Nutritional Value of general food rations.¹²

45. Every effort should be made to provide familiar food items and maintain sound traditional food habits. Expert advice on the ration size and composition is essential and should take full account of local availability of food commodities. Staple food should not be changed simply because unfamiliar substitutes are readily available. Inappropriate foods often lead to waste and lower the morale of the refugees.

46. The first concern is to ensure that energy and protein requirements are met. This requirement is calculated on an average population containing men, women and children of different age groups. However, a complete ration should be provided to each refugee without distinction.

¹² Copies of the NutVal CD and TSS toolkit can be obtained from the UNHCR Technical Support Section (TSS), HQTS01@unhcr.org

A minimum requirement of 2,100 kcal per person per day is used as the planning figure for the affected population at the beginning of an emergency.

A population which contains mostly active adults may require considerably higher average energy intakes. In addition, a higher ration is vital for survival in a cold climate.

47. The daily energy requirement can be adjusted when the situation has stabilized¹³ and detailed data is available. Factors to be taken into consideration are:

- i. age and sex composition of the population;
- ii. activity level;
- iii. climatic conditions;
- iv. health, nutritional and physiological status; and
- v. people's access to other food sources e.g. agriculture, trade, labour.

48. The food basket should comprise: a staple food source (cereals), an additional energy source (fats and oils), a protein source (legumes, blended foods, meat, fish), iodized salt and possibly condiments (such as spices). Fresh foods should be included in the food basket for essential micronutrients. The level of fat intake should provide at least 17% of the dietary energy of the ration, and protein intake should provide at least 10-12% of the total energy (see above).

49. When certain food commodities are not available, they can be replaced for a maximum of one month by other available food items in order to maintain the adequate energy and protein level. Substitution in energy value, should an item not be available, is:

Corn soy blend (CSB) for beans	1:1
Sugar for oil	2:1
Cereal for beans	2:1
Cereal for oil ¹⁴	3:1

¹⁴ Note that oil cannot be used in place of cereal.

For example, the energy from 20g of sugar can substitute for that from 10g of vegetable oil.

50. Fortified cereal flour, rather than whole grain, should be provided, especially at the beginning of an emergency. Considerable fuel savings are made by using milled rather than whole grain. If whole grains are provided, local milling should be made available and the cost compensated for.

Micronutrients

51. Micronutrient deficiencies represent a less visible, but often devastating, form of malnutrition that can be particularly prevalent among a population affected by an emergency or already lacking sufficient quantity and/or quality of food. There is a close relationship between malnutrition, which is often linked to lack of food, and specific micronutrient deficiency diseases that are associated with the consumption of foods poor in micronutrients. Since populations affected by an emergency often have limited access to a varied diet, a large proportion of these are also likely to suffer from multiple micronutrient deficiencies.

52. Populations that are highly dependent on food assistance, which is not adequate, are often at risk of micronutrient-deficiency diseases. Such micronutrient-deficiency diseases include scurvy (vitamin C deficiency), pellagra (niacin deficiency) and beriberi (thiamine deficiency) have been experienced in previous emergency situations. In addition, anaemia, iodine deficiency and vitamin A deficiency are also the three most common micronutrient deficiencies even in non-emergency situations. For details on the micronutrient

¹³ *Food and nutrition needs in emergencies*, UNHCR, UNICEF, WFP, WHO, 2003. <http://whqlibdoc.who.int/hq/2004/a83743.pdf>

content of selected food-aid commodities, see Annex 1.

53. Micronutrient deficiencies increase the risk of communicable diseases or the risk of dying due to diarrhoea, measles, malaria and pneumonia. In turn, communicable diseases contribute to micronutrient deficiencies. The groups most vulnerable to micronutrient deficiencies are pregnant women, lactating women and young children.

Table 2: Micronutrient needs of groups with specific needs

Groups with specific needs	Micronutrient deficiency risk
Pregnant women	Greater risk of dying during childbirth or of giving birth to an underweight or mentally-impaired baby.
Lactating mothers	Micronutrient status determines the health and development of her infant during the breast feeding period, especially for the first 6 months of life.
Young children	Micronutrient deficiencies increase the risk of dying due to infectious disease and contribute to impaired physical and cognitive development.

54. It is essential to ensure that the micronutrient needs of refugees are adequately met through ensuring that the general food aid rations are adequate and well-balanced in content, distributed regularly and in sufficient quantities. In addition, micronutrient fortified foods such as corn soya blend (CSB) should be provided to ensure that recommended daily micronutrient intakes are met. Fortified foods, vegetable oil enriched with vitamin A, and iodized salt, are usually provided as part of food rations in emergencies with a view to preventing micronutrient deficiencies or to protecting against further deterioration of micronutrient status among the targeted population.

The prevention and control of micronutrient deficiencies and other forms of malnutrition requires an integrated approach with food security and public health components.¹⁵

For micronutrient deficiency signs and definitions, see Annex 3 (with photos and a table definition of beri-beri, pellagra, scurvy etc.)

55. The risk of specific nutrient deficiencies can be estimated from the composition of the general ration in combination with the access the population has to other food sources. Possible options for providing vitamins and minerals are:

- i. provide fresh food products;
- ii. promote the production of vegetables and fruits;
- iii. add to the ration a food rich in a particular vitamin and micronutrient such as fortified cereals, blended foods, or condiments;
- iv. ensure provision of vitamin A supplement; and
- v. provide supplements in tablet form, **if necessary.**

56. Wherever possible the refugees should be supported and encouraged to grow vegetables themselves: the production of fresh food by refugees not only improves and diversifies the diet but saves fuel and provides an opportunity to generate some income. Larger plot sizes and the provision of appropriate seeds and skills would facilitate this. It should be taken into consideration, that it can be a challenge to encourage refugees to produce fresh food because of their uncertainty as to the length of their stay and problems of access to land. However, small-scale agricultural activities proved to be a success in various refugee situations.

¹⁵ For more details on micronutrients including prevention and assessment, please see key references.

Nutrition, food and HIV and AIDS

57. For people living with HIV and AIDS among populations of concern to UNHCR, adequate nutrition is recognized as essential to maintain an individual's immune system and desirable weight for an optimal quality of life, as well as to ensure optimal benefits from the use of antiretroviral treatment which can help prevent mother-to-child transmission of HIV.

Based on current scientific evidence:

- HIV-infected adults and children have greater energy needs than uninfected adults and children. Energy needs increase by 10% in asymptomatic HIV-infected adults and children, and in adults with more advanced disease, by 20% to 30%. For HIV-infected children experiencing weight loss, energy needs are increased by between 50% and 100%.
- There is no evidence to support a need for increased protein intake by people infected by HIV over and above that required in a balanced diet to satisfy energy needs (10%-12% of total energy intake).

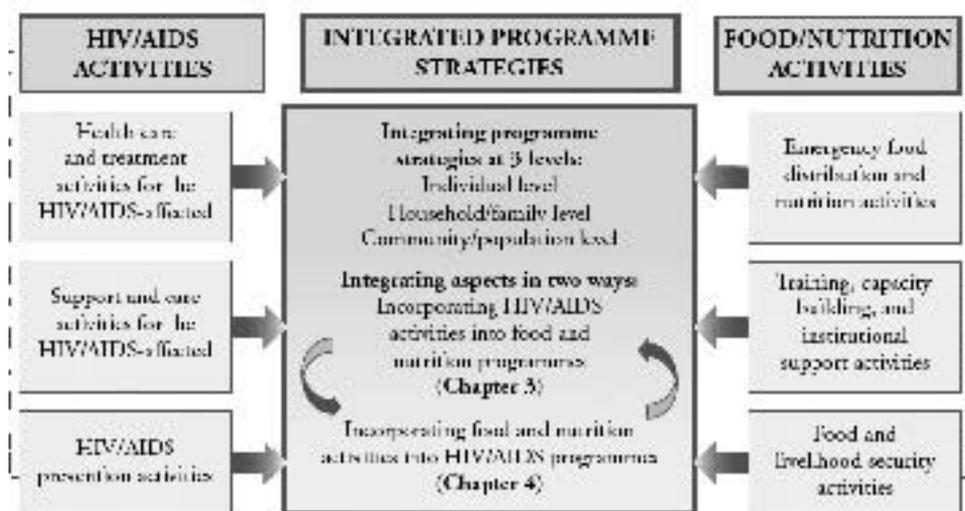

- Micronutrient intakes at daily recommended levels need to be assured in HIV-infected adults and children through consumption of diversified diets, fortified foods and micronutrients supplements as needed.
- WHO's recommendation on vitamin A, zinc, iron, folate, and multiple micronutrient supplements remain the same.
- Optimal nutrition of HIV-infected women during pregnancy and lactation increases weight gain and improves pregnancy birth outcomes.

Figure 3 below outlines the types of food and nutrition as well as HIV and AIDS activities which should be considered for integrated programme strategies at the individual, household and community levels.

For more practical programming strategies on integrating nutrition, food, HIV and AIDS, consult the UNHCR, WFP and UNICEF: Integration of HIV/AIDS activities with food and nutrition support in refugee settings, 2004.

Figure 3 Integrated programme strategies

Food delivery and distribution

58. In countries where the beneficiary caseload exceeds 5,000 people of concern, WFP is responsible for the timely mobilization, transport and storage of sufficient quantities of food commodities at agreed-upon extended delivery points (EDPs). UNHCR is responsible for the timely transport and storage of food that it is responsible for mobilizing (less than 5,000 beneficiaries, complementary food commodities, therapeutic milk etc.). Unless otherwise agreed, UNHCR is also responsible for the transportation of WFP food commodities from the EDPs to the final delivery points (FDPs) and for their final distribution to beneficiaries.

59. Arrangements for the final distribution of food to beneficiaries are agreed upon jointly by the Government, UNHCR and WFP, in consultation with beneficiaries, particularly women's committees, and in conformity with the established commodity distribution guidelines.

60. The final distribution of food commodities will normally be the responsibility of UNHCR through an implementing partner, whose designation shall be jointly agreed upon by UNHCR and WFP. Tripartite agreements will be signed in every joint operation. In the most recent Memorandum of Understanding (MOU) with WFP (July 2002) an agreement has been reached for WFP to take over the responsibility of final food distribution in five jointly selected operations with a view to determining whether this division of labour would be an optimum arrangement for implementation in other situations on a case by case basis. UNHCR maintains its responsibility for distribution of food in all selective feeding programmes.

61. In emergencies, although the preference is on dry distribution, on some occasions there might be a need for distribution of cooked meals. Dry food distribution (which is taken home) has major advantages over cooked food distribution.

It allows families to prepare their food and to use their time as they wish, permits them to eat together as a unit and is more culturally and socially acceptable. It also reduces the risk of the spread of infectious diseases. Cooked meal distribution requires centralized kitchens with adequate utensils, water and fuel (the requirement is less than the amount required for family cooking) and trained personnel. Cooked meal distribution to the whole population is therefore only provided under exceptional circumstances when the refugees do not have access to adequate water and/or cooking fuel and in insecure situations.

62. In addition to cooking pots, fuel and utensils, the refugees must have containers and sacks to protect and store their food rations. Oil tins and grain bags will be useful.

Monitoring the general feeding programme:

63. The general feeding programme can be monitored by:

- ♦ **Food basket monitoring:** Comparing the quantity and quality of food collected by the refugees at the distribution site on distribution days with the planned ration. Confirming what beneficiaries actually receive.
- ♦ **Post distribution monitoring:** Monitoring after the distribution at household and/or community levels through visits. Learning about the use made of the food and the length of food aid by beneficiaries and identifying any changes in the food security situation.
- ♦ Discussing the quality and quantity of the rations regularly with the refugees.
- ♦ Investigating complaints.

For more information on the distribution monitoring report and food distribution monitoring checklist, see the food section of the Technical Support Section's Toolkit, UNHCR 2006.

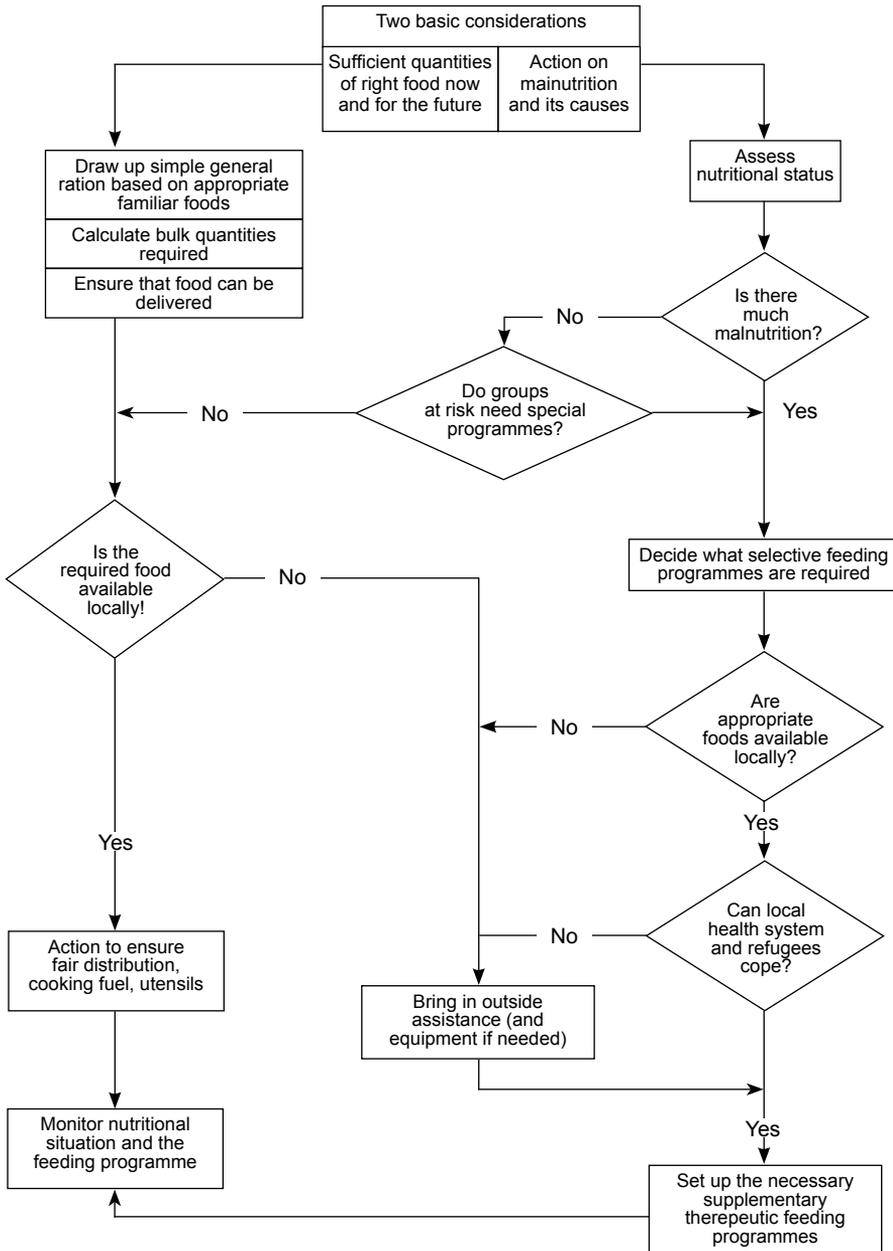

Selective feeding programmes

- ◆ The objective of a selective feeding programme is to reduce the prevalence of malnutrition and mortality among the groups at risk.
- ◆ Selective feeding programmes provide extra food for the malnourished

and at-risk groups – this food must be in addition to (not a substitute for) the general feeding programme.

- ◆ The programme must actively identify those who are eligible for the selective feeding programmes, using criteria described in this chapter.

Figure 4 – Response to food and nutritional needs

General principles of selective feeding programmes

64. Where malnutrition exists or the needs of the groups at risk cannot be met through the general ration, special arrangements are required to provide extra food. This is organized through different types of selective feeding programmes which take into account the degree of malnutrition and associated risks. In the emergency phase of an operation, selective feeding programmes are part of an emergency measure to prevent excess mortality. However, preventing excess mortality should be a combined strategy of selective feeding, public health and emergency health care (see Figure 2: response to nutritional needs).

The organization of these programmes should be integrated from the beginning with community and health services and especially with mother and child health care programmes (MCH).

65. Malnutrition develops particularly among infants, children, pregnant women, nursing mothers, the elderly and the sick. Their vulnerability stems from the greater nutrient requirements associated with growth, the production of breast milk, repair of tissues and production of antibodies. Malnutrition results in lower resistance to infection, which in turn results in further malnutrition. Small children are particularly susceptible to this cycle of infection and malnutrition. Sick children must eat and drink even if they do not have an appetite, are vomiting, or have diarrhoea. Because children are unable to eat a large volume of food, it is necessary to prepare food in a concentrated form (giving the required nutrients in less volume), and to provide more frequent meals.

66. Certain other groups or individuals may be at risk of malnutrition for social or economic reasons. These include unaccompanied children, the disabled, single-parent families, and the elderly, particularly those without family support. In some

communities specific social or cultural practices and taboos may put constraints on meeting the nutritional needs of certain persons, for example pregnant women and nursing mothers or even sick children.

67. Even if the overall quantity of food is sufficient there may be other causes of malnutrition such as:

- i. inequities in the distribution system reducing access to food for certain groups;
- ii. inaccuracies in registration or unfair distribution of ration cards;
- iii. infections; and
- iv. inappropriate feeding practices or food preparation habits.

Selective feeding programmes are not a substitute for an inadequate general ration.

68. The following types of selective feeding programmes are contemplated:

- i. Supplementary feeding programmes (SFP):
 - a) targeted SFP
 - b) blanket SFP
- ii. Therapeutic feeding programmes (TFP):
 - a) hospital and feeding centers
 - b) community-based

To be effective, the extra ration provided in SFP must be additional to, and not a substitute for, the general ration.

Supplementary feeding programmes (SFP)

69. Targeted and blanket supplementary feeding programmes provide extra food to groups at risk, in addition to the general ration, as dry take-home or wet on-the-spot feeding for a limited period of time.

70. A targeted SFP aims to rehabilitate those who are moderately malnourished. These could be children, adults or older persons and/or individuals selected on

medical or social grounds, e.g. pregnant and nursing women and the sick. This is the most common type of supplementary feeding programme.

71. A blanket SFP provides a food (and/or micronutrient) supplement to all members of a certain vulnerable group regardless of their individual nutritional status in order to prevent a deterioration in the nutritional status of those groups most at risk (usually children under five, pregnant women and nursing mothers).

72. Supplementary feeding programmes can be implemented either by giving wet or dry rations.

Therapeutic feeding programmes (TFP)

73. A TFP aims to reduce deaths among infants and young children with severe malnutrition. The forms of severe malnutrition are described in Annex 3. Generally the target group is children under 5 years old with severe malnutrition. Therapeutic feeding can either be implemented in special feeding centers or in a hospital or clinic or at the community level. TFP involves intensive medical and nutritional treatment.¹⁶ Therapeutic foods such as, Therapeutic Milk™, and/or ready-to-use therapeutic food (RUTF), are used for treatment of severely malnourished children.

74. The management of severe malnutrition in children can take place as follows:

- i. **Facility-based management** refers to treatment in a hospital or center that provides skilled medical and nursing care on an inpatient basis. This includes therapeutic feeding centres.
- ii. **Community-based management** refers to treatments that are implemented with some external input, such as the presence of a health worker for diagnosing the condition, institut-

ing treatment and monitoring the condition of the child at home. This applies to the treatment of severe malnutrition when a health worker is involved in identifying a severely malnourished child and in providing treatment that may include a mineral and vitamin supplement or ready-to-use therapeutic food (RUTF).

75. Management of severe malnutrition at the community level using ready-to-use therapeutic foods (RUTF) is a new development. As such, it is highly desirable to manage severe acute malnutrition, with no medical complications, in the community and without an inpatient phase. These are severely malnourished children who are alert, have good appetite, are clinically well, and have reasonable home circumstances who can be rehabilitated at home.

76. The following points should be considered for management of severe malnutrition at the community level:

- Children with severe malnutrition and medical complications should be referred to an inpatient treatment facility with trained staff. These children include severely malnourished children with anorexia, children with severe oedema, or children with any acute severe medical condition.
- Children less than 6 months old who are suspected to be severely malnourished should always be referred for assessment and treatment. Treatment should be based on promotion of breastfeeding (if possible).

77. In addition, the following guiding principles¹⁷ for community-based management of severe malnutrition in children should also be considered:

¹⁷ *The guiding principles for community-based management of severe malnutrition in children were agreed in a consultation meeting (WHO, UNICEF, the UN Standing Committee on Nutrition (SCN) and other partners, including UNHCR in November 2005: http://www.who.int/child-adolescent-health/New_Publications/NUTRITION/CBSM/Meeting_report_CBSM.pdf*

¹⁶ *Procurement of therapeutic foods and technical advice could be facilitated by UNHCR HQs technical unit (TSS and SMS).*

- Identification of severely malnourished children in the community in order to provide for treatment.
- Management of severely malnourished children in the community.
- Community-based management of severe malnutrition in the context of high HIV prevalence.

Identification of severely malnourished children in the community in order to provide for treatment

78. In addition to weight-for-height < 70% or < -3 Z-scores of the median NCHS/WHO reference values and/or bilateral oedema, MUAC < 110 mm can be used independently as a criterion for admission to a therapeutic feeding programme for children aged 6-59 months. Children with a MUAC < 110 mm should be admitted to a programme for the management of severe malnutrition regardless of their weight-for-height.

79. MUAC is a simple and practical tool which should be used by community workers to identify severely malnourished children.

80. In infants less than six months old, it is recommended that “visible severe wasting” and/or oedema, in conjunction with difficulties in breastfeeding be used as admission criteria until further studies are undertaken to develop more precise admission criteria for treatment.

81. High coverage (both temporal and spatial) of the programmes, achieved through active case finding activities, as established in the SPHERE minimum standards must be a key objective for therapeutic feeding programmes.

Community-based management of severe malnutrition in children

82. Programmes for the management of severe malnutrition should usually have a community-based and a facility-based component, so that severely malnourished children, with no complications, can be

treated in the community while those with complications are referred to an inpatient treatment facility with trained staff.

It is highly desirable to manage severely malnourished children with no complications in the community without an inpatient phase. These are severely malnourished children who are alert, have good appetite, are clinically well, are not severely oedematous, and have reasonable home-care circumstances.

83. Children with severe malnutrition having mild or moderate oedema and good appetite but who are not severely wasted can also be treated at home, without an inpatient phase.

84. Children with severe malnutrition and complications should be referred to an inpatient treatment facility with trained staff. These children include severely malnourished children with anorexia, children with severe oedema, children with both severe wasting (MUAC < 110 mm or weight-for-height < 70% or < -3 Z-scores of the NCHS/WHO reference) and mild or moderate oedema, or children who are clinically unwell.

85. For those treated as inpatients, after the complications of severe malnutrition are under control, management should normally be continued in the community. Children who deteriorate at home should be referred for assessment and further management.

Ready-to-use therapeutic foods (RUTF) are useful for treating severe malnutrition without complications in communities with limited access to appropriate local diets for nutritional rehabilitation.

86. When RUTF is given to children with severe malnutrition, 150-220 kcal/kg/day should be provided.

87. When families have access to nutrient-dense foods, severe malnutrition without complications can be managed in the community without RUTF, by means of carefully designed diets using low-cost family

foods, provided appropriate minerals and vitamins are given. Efficacy of local therapeutic diets should be tested clinically.

88. Treatment of young children should include support for breastfeeding and messages on appropriate infant and young children feeding practices. Children less than 6 months old should not receive RUTF, nor solid family foods. These children need milk-based diets and their mothers support to re-establish breastfeeding. They should not be treated at home.

89. Monitoring the effectiveness of treatment should be based on a weight gain of at least 5 g/kg/day for severely wasted children,¹⁸ low case fatality, defaulting and treatment failures, and length of stay under treatment.

Community-based management of severe malnutrition in the context of high HIV prevalence

90. The general principles and guidelines for the care of severely malnourished children in areas of high HIV prevalence do not fundamentally differ from those where HIV is rarely seen.

91. In areas where HIV prevalence is high, there should be unfettered access to HIV services (e.g. VCT, cotrimoxazole prophylaxis, nutritional counselling, ART) and seamless articulation from the onset between levels of care (community, health centre and hospital) and between HIV treatment and malnutrition programmes.

92. All therapeutic foods used, including RUTF, should be chosen to be appropriate for HIV infected persons and severely malnourished children, based on current scientific evidence.

Starting a selective feeding programme

93. The decision to start a selective feeding programme is based on the preva-

lence of malnutrition and other aggravating factors. Aggravating factors include high mortality (more than 1 person per 10,000 per day), measles epidemic, high prevalence of infectious diarrhoea, general ration below minimum requirements. The prevalence of malnutrition is assessed from the initial and on-going nutrition assessments and surveys.

In all situations, remember that it is more important to understand and address the root causes of malnutrition, focusing on prevention in the first place rather than to address symptoms through selective feeding programmes.

94. The effectiveness of these programmes will be severely compromised if an adequate general ration is not provided.

95. Figure 5 provides guidance on deciding when to initiate selective feeding programmes. Clear criteria for the termination of these programmes should be defined from the beginning.

Identifying those eligible

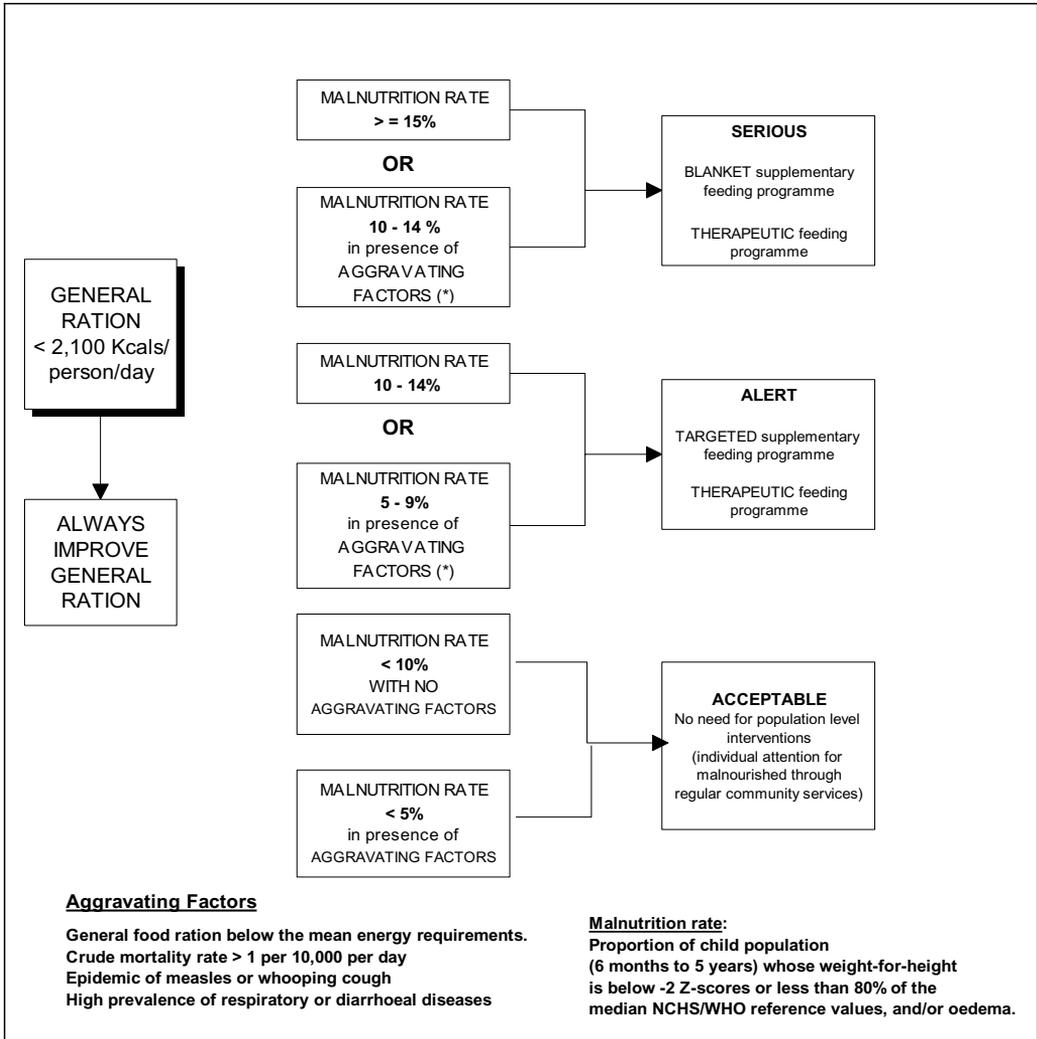

96. Selective feeding programmes must be based on the active identification and follow up of those considered at risk. Beneficiaries can be identified by:

- house to house visits to identify all members of a targeted group (e.g. children under five years old, elderly people);
- mass screening of all children to identify those moderately or severely malnourished;
- screening on arrival (for example with the registration exercise); and
- referrals by community services and health services.

97. Table 3 below summarizes the main objectives, target groups and criteria for selection of beneficiaries of selective feeding programmes.

¹⁸ Rate of weight gain was deliberately changed to a lower level than the SPHERE minimum standards which referred to inpatient treatment of severe malnutrition.

Figure 5 – Selective Feeding Programmes

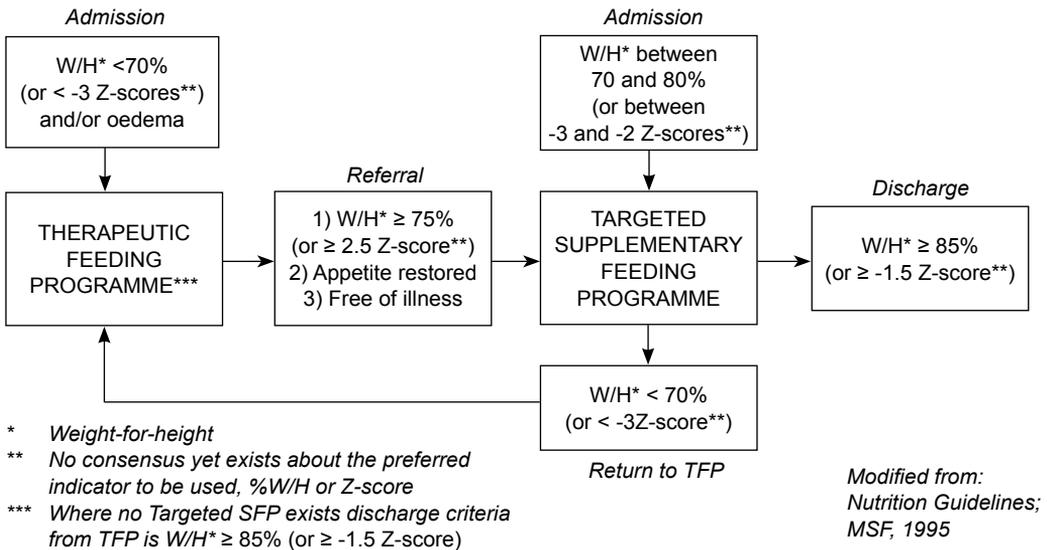

Source: Modified from "Nutrition Guidelines", MSF, 1995

Table 3 – Types of selective feeding programmes

Programme	Objectives	Criteria for selection and target group
Targeted SFP	<ul style="list-style-type: none"> • Correct moderate malnutrition • Prevent the moderately malnourished from becoming severely malnourished • Reduce the mortality and morbidity risk in children under 5 years old • Provide nutritional support to selected pregnant women and nursing mothers • Provide a follow-up service to those discharged from therapeutic feeding programmes 	<ul style="list-style-type: none"> • Children under 5 years old moderately malnourished: <ul style="list-style-type: none"> - between 70% and 80% of the median weight-for-height or: - between -3 and -2 Z-scores weight-for-height • Moderately malnourished individuals (based on weight-for-height, BMI, MUAC or clinical signs) including: <ul style="list-style-type: none"> - older children (between 5 and 10 years old) - adolescents - adults and elderly persons - medical referrals e.g T.B patients • Selected pregnant women (from date of confirmed pregnancy) and nursing mothers (until 6 months after delivery), for instance using MUAC <22 cm as a cut-off indicator for pregnant women • Referrals from TFP • People living with HIV and AIDS (PLWHA)
Blanket SFP	<ul style="list-style-type: none"> • Prevent deterioration of nutritional situation • Reduce prevalence of acute malnutrition in children under 5 years old • Ensure safety net measures • Reduce mortality and morbidity risk • Reduce excess mortality and morbidity risk in children under 5 years old 	<ul style="list-style-type: none"> • Children under 3 or under 5 years old • All pregnant women (from date of confirmed pregnancy) and nursing mothers (until maximum 6 months after delivery) • Other at-risk groups
TFP	<ul style="list-style-type: none"> • Provide medical/nutritional treatment for the severely malnourished <p>Note: TFP includes community-based management of severe malnutrition in children</p>	<p>Children under 5 years old severely malnourished:</p> <ul style="list-style-type: none"> □ < 70% of the median weight-for-height and/or oedema or: □ < -3 Z-scores weight-for-height and/or oedema MUAC <110mm including children with HIV and AIDS <ul style="list-style-type: none"> • Severely malnourished children older than 5 years, adolescents and adults admitted based on available weight-for-height standards or presence of oedema including PLWHA • Severely malnourished low birth weight babies

98. The links between different selective feeding programmes and the criteria for entry and discharge from a programme are shown in figure 6 below.

Figure 6 – Admission and discharge Criteria

Planning and organizing a selective feeding programme

Organizing a supplementary feeding programme (SFP)

99. Supplementary feeding programmes (SFP) can be implemented either by providing wet rations or dry rations.

- i. Wet rations are prepared in the kitchen of a feeding centre and consumed on-site. The beneficiary, or child and caregiver, have to come for all meals to the feeding centre every day.
- ii. Dry rations are distributed to take home for preparation and consumption. Rations are usually distributed once a week.

100. In most situations dry take-home SFP programmes are preferable. The advantages of dry instead of wet rations for SFP include:

- i. much easier to organize;
- ii. fewer staff are needed;
- iii. lower risk of transmission of communicable diseases;
- iv. less time-consuming for the mother; and
- v. the mother's responsibility for feeding the child is preserved.

The ration for dry feeding however has to be higher than for wet feeding in order to compensate for sharing and substitution. Wet rations are typically given in situations where insecurity prevents dry rations from being taken home safely or where access to cooking facilities are limited. See Table 4 below for some of the main considerations when organizing a selective feeding programme.

Table 4: Organization of selective feeding programmes

Organization of Selective Feeding Programmes			
	Supplementary Feeding Programme		Therapeutic Feeding Programme (facility-based)
Organization	<ul style="list-style-type: none"> • On site wet feeding • Some medical care On site feeding would usually only be considered for targeted SFP	<ul style="list-style-type: none"> • Take home dry feeding This is the preferred option for both blanket and targeted programmes	<ul style="list-style-type: none"> • On site wet feeding (only for those who are severely malnourished with medical complications) + Intensive medical care + Psychological stimulation during rehabilitation phase
Size of extra ration	<ul style="list-style-type: none"> • 500 - 700 kcal/person/day, and • 15-25 g protein 	<ul style="list-style-type: none"> • 1,000 - 1,200 kcal/person/day, and • 35-45 g protein 	<ul style="list-style-type: none"> • 150 kcal/kg body-weight/day/patient. and • 3-4 g protein per kg body-weight/day/patient
Frequency of meals	Minimum 2 meals/day	Ration distributed once per week	Frequent meals. Phase 1: 8-10 meals over a 24 hour period Rehabilitation phase: 4-6 meals Note: In addition, see guiding principles for community-based management of severe malnutrition in children ¹⁹

Organizing a therapeutic feeding programme (TFP)

101. Therapeutic feeding programmes (TFP) are either implemented in specially organized feeding centers, hospitals, clinics or at community level. They involve medical and nutritional treatment as well as rehydration. The programme should be easily accessible to the population, near to or integrated into a health facility. The treatment should be carried out in phases (see Table 4), the length of which depend on the severity of malnutrition and/or medical complications. For complicated cases in an inpatient facility, at least during the first week of a TFP, care has to be provided on a 24-hour basis.

102. One of the main constraints to the implementation of a TFP is the lack of experienced or insufficient staff to manage the programme. Proper training of both medical and non-medical personnel is essential before starting the programme. The refugees, particularly the mothers of patients, must be involved in managing the TFP centres. Management of severe malnutrition for cases with no complications as mentioned above can be org-

nized as outpatient and be treated in the community using RUTF. Inputs including RUTF supply, community mobilization, monitoring of progress indicators and follow-up are essentials for the success of the programme.

Planning the quantity of food needed for selective feeding

103. The amount of food needed for the selective feeding programme will depend on:

- i. the type of selective programme;
- ii. the type of commodities; and
- iii. the expected/eligible number of beneficiaries.

104. This information should be based on precise demographic information and on the prevalence of malnutrition taken from the results of the nutritional survey. The

¹⁹ The guiding principles for community-based management of severe malnutrition in children were agreed in a consultation meeting (WHO, UNICEF, the UN Standing Committee on Nutrition (SCN) and other partners including UNHCR in November 2005: http://www.who.int/child-adolescent-health/New_Publications/NUTRITION/CBSM/Meeting_report_CBSM.pdf.

nutritionist will advise on the appropriate commodities and type of programme.

105. However, in some circumstances, estimates on the prevalence of malnutrition and expected number of beneficiaries may need to be made for planning purposes, when for example a registration and nutrition assessment have not yet been carried out. See Table 5 below for a projected demographic breakdown for a typical population.

106. If it is apparent that there is, or is likely to be, a major nutritional emergency, the following assumptions can be made for planning purposes:

- i. 15 to 20% may suffer from moderate malnutrition.
- ii. 2 to 3% may be severely malnourished.
- iii. The breakdown of a typical population, by age, is as follows:

Table 5: Projected demographic breakdown

Projected breakdown by age	
Age groups	% Total population
0-4 or under 5	15-20%
Pregnant	1.5 - 3%
Lactating	3-5%

107. For example, to estimate the number of beneficiaries for a targeted SFP and TFP, both for children under 5 years old:

If the total population = 30,000

Estimated number under 5 years old = 4,500 – 6,000 (15-20%)

Estimated prevalence of moderate malnutrition (15%) gives 675-900 children

Estimated prevalence of severe malnutrition (2%) gives 90-120 children

With these numbers the estimated food requirements can be calculated by multiplying the estimated number of beneficiaries for each programme by the ration scale appropriate for each beneficiary, as follows:

Quantity of commodity required = ration / person / day X number of beneficiaries X number of days

Monitoring selective feeding programmes

108. The effectiveness of impact of the selective feeding programme should be monitored at regular intervals.

109. Selective feeding programmes should be monitored and evaluated to assess their performance in relation to the established objectives.²⁰ Monitoring and evaluation will involve the regular collection and analysis of:

- process indicators such as attendance, coverage and recovery rates, to evaluate the success in implementation and trends in the programme over time; and
- impact indicators such as malnutrition prevalence, mortality rate and numbers served, to evaluate the effectiveness and efficacy of the programme.

110. The effectiveness of selective feeding programmes can be measured through nutrition surveys and the regular collection of feeding centre statistics. Specific forms for monthly reporting on supplementary and therapeutic feeding programmes are attached as Annexes 4 and 5. A nutrition survey results form (weight-for-height) is also attached (Annex 7).

111. Trends in health and nutrition indicators can be related to many different factors.

Actions in other sectors such as water, shelter, or community services may help explain a positive outcome.

Criteria for closing programmes

112. Once the number of malnourished is significantly reduced, it may be more ef-

²⁰ For further reference, consult Chapter 8: Evaluation of Feeding Programmes in the MSF Nutrition Guidelines.

ficient to manage the remaining severely malnourished individuals through health facilities and through community-based programmes. The specific criteria for closing each selective feeding programme will depend on the degree of success in reducing the main aggravating factors mentioned in Figure 5 and on the degree of integration between these feeding programmes and mother and child health (MCH) activities and other support services offered by the refugee community.

113. After closing selective feeding programmes, any deterioration of the situation should be detected by nutrition surveys undertaken at regular intervals and review of morbidity and mortality data. This is especially important if the overall situation remains unstable.

Infant and young child feeding and use of milk products^{21 22}

- ◆ The protection, promotion and support of breastfeeding and appropriate complementary feeding are essential to the well-being of infants and young children.
- ◆ Inappropriate handling of milk products in situations of concern to UNHCR, can negatively impact on infant feeding practices and directly contribute to increased morbidity and mortality in infants and young children.
- ◆ UNHCR supports the policy of the World Health Organization (WHO) concerning safe and appropriate infant and young child feeding, in particular by protecting, promoting and supporting exclusive breastfeed-

²¹ *Infant and Young Child Feeding in Emergencies, Operational Guidance for Emergency Relief Staff and Programme Managers, Inter-Agency Working Group on Infant and Young Child Feeding in Emergencies/Infant Feeding in Emergencies Core Group, version 2.0.*

²² *Policy of the UNHCR related to the Acceptance, Distribution, and use of Milk Products in Refugee Settings, Revised Edition, 2006.*

ing for the first six months of life and continued breastfeeding for 2 years or beyond, with timely and correct use of adequate complementary foods.

- ◆ The use of milk products in refugee settings must conform with the International Code of Marketing of Breast Milk Substitutes and the Operational Guidance on Infant and Young Child Feeding in Emergencies, as well as the revised UNHCR policy on the acceptance, distribution and use of milk products in refugee settings.²³
- ◆ Breastfeeding and infant and young child feeding support should be integrated into other services for mothers, infants and young children.
- ◆ Foods suitable to meet the nutrient needs of older infants and young children must be included in the general ration for food aid dependent populations.
- ◆ Breast milk substitutes, other milk products, bottles or teats must never be included in a general ration distribution. These products must only be distributed according to recognised strict criteria and only provided to mothers or caregivers for those infants who need them.
- ◆ UNHCR will actively discourage the inappropriate distribution and use of breast milk substitutes (BMS) in refugee settings. UNHCR will uphold and promote the provisions of the *International Code of Marketing of Breast milk Substitutes and subsequent relevant WHA resolutions*.
- ◆ For infants requiring infant formula in emergencies, generic (unbranded) formula is recommended as first choice, after approval by a senior staff member and the coordinating body.

²³ *Other relevant publications are: WHO Guiding Principles for Feeding Infants and Young Children in Emergencies, relevant World Health Assembly (WHA) resolutions and the Sphere Project.*

- ◆ In refugee settings and in accordance with UNHCR policy as well as operational guidance, UNHCR will source infant formula after review and approval by its HQ technical units.
- ◆ Breastfeeding and infant and young child feeding support should be integrated into other services for mothers, infants and young children.
- ◆ Foods suitable to meet the nutrient needs of older infants and young children must be included in the general ration for food aid dependent populations.

114. Human milk is the best and safest for infants and children under two years old. Breastfeeding provides a secure and hygienic source of food, initially the only source of food, as well as antibodies giving protection against some infectious diseases. Mothers may need to receive extra food to encourage breastfeeding and provide the additional calories and nutrients required. This should be done through the feeding programmes.

Careful attention to infant feeding and support for good practice can save lives. Preserving breastfeeding, in particular, is important not just for the duration of any emergency, but may have lifelong impacts on child health and on women's future feeding decisions. Every group of people has customs and traditions about feeding infants and young children. It is important to understand these and work with them sensitively while promoting best practice.

115. The problems associated with infant formulae, milk products and feeding bottles are exacerbated in a refugee emergency. Clean boiled water is essential but rarely available, careful dilution of the feeds is of critical importance but difficult to control; mothers are unlikely to be familiar with the use of infant formulae, and the instructions are often in a foreign language. Infant formulae, if unavoidable, should be distributed from health or

feeding centres under strictly controlled conditions and proper supervision. Infant feeding bottles must never be distributed or used; they are almost impossible to sterilize and keep sterile under emergency conditions and are therefore dangerous. Babies should be fed by clean cup and spoon if necessary.

Key definitions

Infant and young child feeding: key definitions

Infant: a child aged less than 12 months.

Young child: a child aged 12- <24 months (12-23 completed months). *This age group is equivalent to the definition of toddler (12-23 months) as defined in the World Health Report 2005, p.155 (<http://www.who.int/whr/2005/en/>).*

Optimal infant and young child feeding: early initiation (within one hour of birth) of exclusive breastfeeding, exclusive breastfeeding for the first six months of life, followed by nutritionally adequate and safe complementary foods while breastfeeding continues for up to two years old or beyond.

Exclusive breastfeeding: an infant receives only breast milk and no other liquids or solids, not even water, with the exception of drops or syrups consisting of vitamins, mineral supplements or medicines.

Complementary feeding (previously called 'weaning' and more accurately referred to as '**timely complementary feeding**'): the child receives age-appropriate, adequate and safe solid or semi-solid food in addition to breast milk or a breast milk substitute.

Replacement feeding: Feeding infants who are receiving no breast milk with a diet that provides the nutrients infants need until the age at which they can be fully fed on family foods. During the first six months, replacement feeding should

be with a suitable breast milk substitute. After six months the suitable breast milk substitute should be complemented with other foods.

Note: This terminology is used in the context of HIV/AIDS and infant feeding. The current UN recommendation states that “when replacement feeding is acceptable, feasible, affordable, sustainable and safe, avoidance of all breastfeeding by HIV-infected mothers is recommended during the first months of life.” If these criteria are not met, exclusive breastfeeding should be initiated, and breastfeeding should be discontinued as soon as it is feasible (‘early cessation’), taking into account local circumstances, the individual woman’s situation and the risks of replacement feeding (including infections other than HIV, and malnutrition).

International Code: The International Code of Marketing of Breast Milk Substitutes, adopted by the World Health Assembly (WHA) in 1981, and subsequent relevant WHA resolutions, referred to here as ‘the International Code’ (4). The *aim* of the International Code is to contribute to the provision of safe and adequate nutrition for infants, by the protection and promotion of breastfeeding, and by ensuring the proper use of breast milk substitutes when these are necessary, on the basis of adequate information and through appropriate marketing and distribution. The Code sets out the *responsibilities* of the manufacturers and distributors of breast milk substitutes, health workers, national governments and concerned organizations in relation to the marketing of breast milk substitutes, bottles and teats.

Supplies: In the context of the International Code, supplies means quantities of a product provided for use over an extended period, *free or at a low price*, for social purposes, including those provided to families in need. In the emergency context, the term supplies is used generally to describe quantities of a product irrespec-

tive of whether they have been purchased, subsidized or obtained free of charge.

Breast milk substitute (BMS): any food being marketed or otherwise represented as a partial or total replacement for breast milk, whether or not suitable for that purpose.

Note: In practical terms, foods may be considered BMS depending on how they are marketed or represented. These include infant formula, other milk products, therapeutic milk, and bottle-fed complementary foods marketed for children of up to 2 years old and complementary foods, juices, teas marketed for infants of under 6 months old.

Infant formula: a breast milk substitute formulated industrially in accordance with applicable Codex *Alimentarius* standards [developed by the joint Food and Agriculture Organization (FAO) / World Health Organization (WHO) Food Standards Programme]. *Commercial* infant formula is infant formula manufactured for sale, branded by a manufacturer and may be available for purchase in local markets. *Generic* infant formula is unbranded and is not available on the open market, thus requiring a separate supply chain.

Follow-on/follow-up formula: These are specifically formulated milk products defined as “a food intended for use as a liquid part of the weaning diet for the infant from the sixth month on and for young children” (Codex *Alimentarius* Standard 156-19871). Providing infants with a follow-on/follow-up formula is not necessary (See WHA Resolution 39.28, 1986, para 3 [2]). In practice, follow-on formula may be considered a BMS depending on how they are marketed or represented for infants and children of under 2 years old and fall under the remit of the International Code.

Note: Acceptable milk sources include expressed breast milk (heat-treated if the mother is HIV-positive), full-cream

animal milk (cow, goat, buffalo, sheep, camel), Ultra High Temperature (UHT) milk, reconstituted evaporated (but not condensed) milk, and fermented milk or yoghurt. (See ref (9)).

Home-modified animal milk: a breast milk substitute for infants up to six months old prepared at home from fresh or processed animal milk, suitably diluted with water and with the addition of sugar and micronutrients.

Note: Acceptable milk sources include full-cream animal milk (liquid or powdered), Ultra High Temperature (UHT) milk, or reconstituted evaporated (but not condensed) milk. These milks must be adapted/modified according to specific recipes, and micronutrients should also be given (22b). It is difficult to obtain nutritional adequacy with such milks, even with added micronutrients. Thus, home-modified animal milks should only be used as a last resort to feed infants when there is no alternative.

Infant complementary food: any food, whether industrially produced or locally prepared, used as a complement to breast milk or to a breast milk substitute and that should be introduced after six months of age.

Note: The term 'infant complementary food' is used in the Operations Guidance to distinguish between complementary food referred to in the context of infant and young child complementary feeding, and complementary food used in the context of Food Aid (i.e. foods, beyond the basic food aid commodities, given to an affected population to diversify their dietary intake and complement the ration, e.g. fresh fruit and vegetables, condiments or spices. Infant complementary foods should not be marketed for infants under six (completed) months old. Supplementary foods are commodities intended to supplement a general ration and used in emergency feeding programmes for the

prevention and reduction of malnutrition and mortality in vulnerable groups.

Commercial baby foods (industrially produced infant complementary foods): branded jars, packets of semi-solid or solid foods.

Milk products: dried whole, semi-skimmed or skimmed milk; liquid whole, semi-skimmed or skimmed milk, soya milk, evaporated or condensed milk, fermented milk or yogurt.

Ready-to-use therapeutic food (RUTF): RUTF are specialized products for use in the management of severe malnutrition, typically in community and home based settings. They may be locally produced or manufactured at national or international level.

Note: Infants do not have the reflex to swallow solid foods before 6 months old and should never be given RUTF before that age. Also, marketing or otherwise representing RUTF as a partial or total replacement for breast milk in infants under six months old would mean they would fulfil the definition of a breast milk substitute and come under the remit of the International Code.

Therapeutic milk: Term commonly used to describe formula diets for severely malnourished children, e.g. F75 and F100. Strictly speaking, these are not milks – F100 comprises only 42% milk product, and F75 less so. Therapeutic milk may be pre-formulated or prepared from dried skimmed milk (DSM), with the addition of a vitamins and minerals complex.

Note: Therapeutic milks should not be used to feed infants and young children who are not malnourished. The standard dilution of F100 has too a high a solute load for infants under six months old. Therapeutic milks contain no iron and long term use will lead to iron deficiency anaemia.

Infant feeding equipment: bottles, teats, syringes and baby cups with or without lids and/or spouts.

World Health Assembly (WHA) resolutions: see definition for International Code.

HIV and infant feeding

- ◆ Emphasize primary prevention of HIV/AIDS through such means as provision of condoms.
- ◆ Where the HIV status of the mother is unknown or she is known to be HIV negative, she should be supported to exclusively breastfeed. Exclusive breastfeeding is recommended for HIV-infected women for the first six months of life unless replacement feeding is acceptable, feasible, affordable, sustainable and safe (AFASS) for them and their infants before that time. When replacement feeding is acceptable, feasible, affordable, sustainable and safe avoidance of all breastfeeding by HIV-infected women is recommended.
- ◆ Where a mother is HIV positive, UNHCR will support **replacement feeding** (see key definitions).

In all circumstances, because of the existing research and experience gaps, consult relevant senior staff for up-to-date advice.²⁴

Protect, promote and support optimal infant and young child feeding with integrated multi-sectoral interventions

Basic interventions

116. Ensure that the nutritional needs of the general population are met, paying special attention to access to commodities suitable as infant complementary foods for young children. In situations where nutritional needs are not met, advocate for a

general ration, appropriate in quantity and quality. In situations where supplementary foods are available but sufficient food for the general population is not available, consider pregnant and lactating women as a target group.

117. Complementary feeding for older infants (over six months old) and young children (12-<24 months old) in emergencies may comprise:

- i. basic food-aid commodities from general ration with supplements of inexpensive locally available foods;
- ii. micronutrient fortified blended foods, e.g. corn soya blend, wheat soya blend, (as part of general ration, blanket or supplementary feeding); and
- iii. additional nutrient-rich foods in supplementary feeding programmes.

118. In all situations, special attention should be given to the nutritional value of the food ration distributed to infants and young children, whose particular nutritional requirements are often not covered by the general ration. Nutrient dense foods for children, whether fortified or non-fortified, should be chosen, taking into account possible micronutrient deficiencies.

119. Where a population is dependent on food aid, a micronutrient fortified food should also be included in the general ration for older infants and young children. Ready-to-Use Therapeutic Food (RUTF) are formulated for the management of malnutrition and are not an appropriate infant complementary food (see key definitions above).

120. Before distributing an industrially produced infant food during an emergency, the cost compared to local foods of similar nutritional value and the risk of undermining traditional complementary feeding practices should be considered. As a rule, expensive industrially produced commercial baby foods have no place in an emergency relief response.

²⁴ For most up-to-date scientific evidence, refer to http://www.who.int/child-adolescent-health/NU-TRITION/HIV_infant.htm

121. Establish registration of new-borns within two weeks of delivery to ensure timely access to additional household ration entitlement.

122. Ensure rest areas in transit and establish, where culturally appropriate, secluded areas for breastfeeding. Screen new arrivals to identify and refer any mothers or infants with severe feeding problems and refer for immediate assistance.

Train health/nutrition/community workers to promote, protect and support optimal infant and young child feeding as soon as possible after emergency onset. Knowledge and skills should support mothers/caregivers to maintain, enhance or re-establish breastfeeding.

123. Ensure easy and secure access for caregivers to water and sanitation facilities, food and non-food items.

Targeting and use, procurement, management, and distribution of breast milk substitutes (BMS), milk products, bottles and teats should be strictly controlled, based on technical advice, and comply with the International Code and all relevant World Health Assembly Resolutions.

UNHCR's policy related to the acceptance, distribution and use of milk products:

1. UNHCR will not accept *unsolicited* donations of breast milk substitutes, bottles and teats and commercial 'baby' foods (see definitions). UNHCR will work with the coordinating agency to limit the risks of unsolicited donations that end up in circulation in refugee settings.
2. UNHCR will only accept *solicited* donations or source infant formula when based on infant feeding needs assessment by trained personnel using established and agreed criteria, where key conditions are met (see sections 5.5-5.8) of the UNHCR pol-

icy, in consultation with the designated coordinating body, UNICEF and WHO, and after review and approval by UNHCR HQ technical units.

3. UNHCR will discourage the distribution and use of infant-feeding bottles and artificial teats in refugee settings. In any instance where an infant or young child is not breastfed, cup feeding is encouraged.
4. UNHCR will only accept, supply and distribute pre-formulated therapeutic milk products (see definitions) or dried skimmed milk (DSM) to prepare therapeutic milk for treatment of acute severe malnutrition, or combined mineral and vitamin mix (CMV) in accordance with the WHO guidelines, and in line with Memorandum of Understanding (MOU) with the World Food Programme (WFP), in consultation with the coordinating body, with UNICEF and WHO, and after review and approval by UNHCR HQ technical units.

Guidelines for the safe use of milk products

Dried milk powder

124. Milk powder, both dried skimmed milk (DSM) and dried whole milk (DWM), may be used in reconstituted form **only** where it can be mixed carefully with other foods²⁵ and hygienically in a supervised environment for on-the-spot consumption, e.g. as a therapeutic milk in a therapeutic feeding programme. On-the-spot feeding programmes, e.g. supplementary wet feeding programmes, should be conducted in enclosed areas under supervision, where the carrying away of reconstituted milk can be prevented. Unreconstituted DSM should be mixed with other foods to make it suitable for feeding older infants.

²⁵ DSM, if not mixed with other foods, has a very high solute load and is not suitable for infant feeding.

125. DSM should always be mixed with oil in order to supply sufficient energy. Both DSM and DWM should be prepared with sugar to increase their energy content.

UHT liquid milk

126. UHT liquid milk should not be included in general distributions in refugee settings.

Breast milk substitutes (BMS)²⁶

127. UNHCR will only handle BMS in refugee settings when based on infant feeding needs assessment by trained personnel using established and agreed criteria, where distribution can be targeted, where the supply chain is secure, where conditions for safe preparation and use can be met, and in strict accordance with the International Code, in consultation with UNICEF and WHO, and after review and approval by UNHCR HQ technical units.

Glossary

Anthropometry	The technique that deals with measurements of the size, weight, and proportions of the human body.
Baseline data	Data collected at the beginning of a programme that can be compared with similar data collected later and so used to evaluate the impact of interventions or to monitor trends.
Body mass index (BMI)	Anthropometric measure defines weight in kilograms divided by height in meters squared. (weight in kg)/ (height in m). ² It is used for assessing the nutritional status of adolescents and adults.
Fortified blended food	A flour composed of pre-cooked cereals and a protein source, mostly legumes, fortified with vitamins and minerals, e.g. corn soya blend (CSB), wheat soya blend (WSB) used for general and selective feeding programmes.
Fortification	Adding micronutrients to foods, e.g. iodized salt and fortified blended food.
Kilocalorie	Unit of energy used in nutrition, 1 Kcal = 4.17 kilojoules.
Kwashiorkor	Severe form of malnutrition characterized by oedema (swelling) particularly of the lower parts of the arms and legs.
Marasmus	Severe form of malnutrition in which the person becomes wasted.
Micronutrients	Minerals and vitamins.
Mid-upper arm circumference (MUAC)	Circumference at the mid-point of the left upper arm, which is an indicator of malnutrition and used as a tool for screening.
Nutrients	Those parts of food that are absorbed and/or used by the body i.e. carbohydrate, protein, fat, alcohol, vitamins and minerals.
Oedema	An abnormal accumulation of fluid in intercellular spaces of the body. In case of nutritional oedema this is oedema due to a deficiency in the diet.
On-site feeding	Cooked meal eaten at the feeding centre.
Ready-to-use therapeutic foods (RUTF)	RUTFs are specialised products for use in the management of severe malnutrition, typically in community and home based settings. They may be locally produced or manufactured at national or international level.
Therapeutic milk	Specialized milk products indicated for use in the management of severe malnutrition e.g. F75, F100. Therapeutic milk may be pre-formulated or prepared from dried skimmed milk (DSM), with the addition of a vitamins and minerals complex.
Stunting	Low height for age. Comparing the height of a child of a certain age with the height of reference (healthy) children of the same age indicates the level of chronic malnutrition.
Take-home rations	Dry rations that are given to people to take and prepare at home.
Therapeutic milk	Special milk used for rehabilitation of severely malnourished persons.
Wasting	Abnormal loss of fat and/or muscle tissue which is indicated by a low weight for height, a low body mass index or observation (thinness).
Xerophthalmia	Clinical signs in the eye caused by vitamin A deficiency.
Weight-for-height	The weight of a person at a certain height compared with the reference weight for that height.
Z-score	Z-score is statistical term. It indicates the deviation of an individual's values from the mean value of a reference population taking into consideration the standard deviation of the reference distribution. Z-score is used in analysing continuous variables such as heights and weights of a sample in a nutrition survey
Wasting (acute malnutrition)	Percentage of children under the age of five suffering from moderate or severe wasting (below -2SD from the median weight for height of reference population).
Stunting (chronic malnutrition)	Growth failure in a child that occurs over a slow cumulative process. Stunting can occur even before birth and it is not possible to reverse it later. Stunted children are short for their age. It is measured by the height for age index

Annex 1 – Basic facts about food and nutrition

All foods are made up of five basic types of nutrient in addition to variable amounts of water.

Carbohydrates, the main source of energy, provide 4 kcal/g. They are mostly starches and sugars of vegetable origin, and are a major component of cereals and tubers.

Fats and oils provide the most concentrated source of energy, and have more than twice the energy content per weight of carbohydrates and proteins (9/kcal/g).

Proteins are body-building substances required for growth and tissue repair. Protein is found in foods of animal origin and in cereals and legumes and provide 4 kcal/g.

Vitamins and minerals are needed in small quantities for the adequate functioning of the body and protection against disease. Fresh vegetables and fruits are a good source of vitamins. Water soluble vitamins are fragile and cannot be stored (Vitamins Bs and C), whereas fat soluble vitamins can be stored in the body (Vitamin A and D). Important minerals are iron, sodium, iodine, zinc, magnesium, potassium, etc. Individual vitamins and minerals or combinations are found in all foods in very variable amounts.

Energy and protein intakes

If the energy intake is inadequate, some protein will be burnt to provide energy. That is, it will be used in the same ways as carbohydrate or fat. More than 20% of the energy requirement should be supplied from fats and oils which greatly enhance the palatability of the diet and increase energy density (important for younger children). Energy requirements vary widely even in normal individuals. They are also increased by physical activity. Much higher energy and protein intakes are required for the treatment of malnutrition, when the aim is rehabilitation rather than maintenance.

Food and Diets

Most diets in most countries contain adequate amounts of all the nutrients required for good health if enough of the diet is taken to satisfy the individual's energy requirements. Even a growing child, if healthy, requires no more than 10% of total calories to be supplied from protein sources.

Annex 1 (cont.) – Prices , nutritional value and unit cost of World Food Programme (WFP)-supplied commodities (for project costing and general planning) March 2006

Annex 2 - Characteristics of common foods

	Food type	Vitamins and minerals	Comments
1.	Cereal grains (rice, corn, sorghum, oats, etc.)	Contain vitamin B and iron. However these are reduced by milling, i.e. the whiter the flour the greater the loss of vitamins.	The main source of both energy and protein in most diets.
2.	Legumes / oilseeds (beans, peas, soya, groundnuts, etc.)	B complex vitamins. Most contain significant quantities of iron and calcium.	Legumes are particularly useful when eaten with cereals as the proteins complement each other
3.	Whole tubers and roots (yams, taro, cassava, sweet potato, potato, etc.)	Variable but generally low, except for potatoes which are rich in vitamin C.	Bulk and low protein content makes them unsuitable as staple foods in emergencies.
4.	Vegetables and fruits	Important source of vitamins and minerals. Variable quantities of B and C vitamins. Dark green leaves or yellow/red pigmentation usually indicates vitamin A compounds.	
5.	Meat, milk and dairy products, eggs, etc	Good sources of B vitamins. Whole milk and eggs also good source of vitamin A. Milk and eggs provide significant amounts of calcium.	Usually consumed in very small quantities in normal times. They are more readily used by the body than proteins of vegetable origin. Therefore small quantities useful to improve the quality and palatability of diet.
6.	Fish, dried	Rich source of calcium and iron. Contains B vitamins.	A concentrated source of protein for those who like it. Therefore acceptability trials essential before use.
7.	Fats and oils	Fats derived from milk are sources of vitamin A and D, while vegetable fats contain no vitamin A and D, except for red palm-oil.	Useful way to increase energy intake without increasing bulk of diet. Improves palatability and helps in food preparation.

Examples of adequate full rations in terms of energy, protein and fat for populations entirely reliant on food assistance

Source: *Food and nutrition needs in emergencies, UNHCR, UNICEF, WFP, WHO, 2003*

ITEMS	RATIONS (quantity in g)				
	Example 1	Example 2	Example 3	Example 4	Example 5
Cereal	400	450	350	400	400
Pulses*	60	60	100	60	50
Oil (vit. A fortified)	25	25	25	30	30
Fish/meat	-	10	-	30	-
Fortified blended foods	50	40	50	40	45
Sugar	15	-	20	-	25
Iodized salt	5	5	5	5	5
Energy: kcal	2,113	2,075	2,113	2,146	2,100
Protein (in g and in % kcal)	58 g; 11%	71 g; 13%	65 g; 12%	55 g; 10%	65 g; 12%
Fat (in g and in % kcal)	43 g; 18%	43 g; 18%	42 g; 18%	42 g; 17%	39 g; 17%

Five types of rations are shown to illustrate differences due to factors such as the food habits of the population, the acceptability and availability of the commodities in the region.

Annex 3 – Main nutritional deficiency disorders in emergencies¹⁵

Protein-energy malnutrition (PEM) is likely to be the most important health problem and a leading cause of death during an emergency. There are several forms:

Marasmus is marked by the severe wasting of fat and muscle, which the body has broken down for energy, leaving “skin and bones”. It is the most common form of PEM in nutritional emergencies.

Kwashiorkor is characterized essentially by oedema (swelling which usually starts in the feet and legs), sometimes accompanied by a characteristic skin rash and/or changes in hair colour (reddish). The hair becomes sparse.

In **Marasmic kwashiorkor** there is a combination of severe wasting and oedema. Children under 5 years old are usually the most affected, but older children and adults are also often at risk or affected. The treatment of severe forms of acute malnutrition is presented in the section on selective feeding programmes.

Vitamin and mineral deficiencies can cause long-lasting or permanent disabilities and can be fatal. The deficiencies most likely to occur include:

Iron deficiency (1) causes **anaemia**. (signs: pallor of skin and eyelids, fatigue, weakness and shortness of breath); (2) increases the risk of haemorrhage, infection and death associated with childbirth; (3) increases rates of low-birth-weight and (4) impairs the cognitive development of infants and children.

Iron Deficiency Anaemia

Pale mucous membranes in the eye and the tongue are signs of anaemia. You may see these signs in males and females of all ages.

ICH/UNHCR MNDD Slide

Iodine deficiency causes not only **goitre** but also some impairment of intellectual development in children and of reproductive performance in women (see illustrations below). Severe maternal deficiency can cause cretinism in the offspring. Best prevented in emergencies by the use of iodized salt.

Photo taken by Internal Displacement Division (IDD)

¹⁵ Adapted from: *The management of nutrition in major emergencies*. WHO, Geneva 2000.

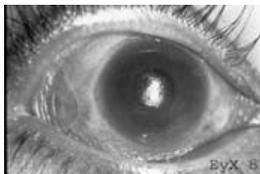

Vitamin A deficiency causes **xerophthalmia**, blindness and death (see illustrations below). Eye signs: poor vision in dim light, dryness of conjunctiva or cornea, foamy material on the conjunctiva or clouding of the cornea itself. These signs may appear after several months of an inadequate diet, or following acute or prolonged infections, particularly measles and diarrhoea.

Vitamin A Deficiency Xerophthalmia

Bitot's spots *X1B(are foamy white areas on the white of the eye. Be careful not to confuse them with other types of eye problems. These signs will most often be seen in children.

Corneal Xerosis (X2)

Keratomalacia (X3)

Vitamin B1 (thiamine) deficiency causes *beri-beri*. Symptoms and signs: loss of appetite, malaise and severe weakness, especially in the legs; may also lead to paralysis of the limbs or swelling of the body, heart failure and sudden death. Beri-beri occurs when the diet consists almost exclusively of white polished rice or starchy staple such as cassava.

Vitamin C deficiency causes *scurvy*. Signs: swollen gums which bleed easily, swollen painful joints, easy bruising. This occurs due to a lack of fresh vegetables and fruits.

Niacin deficiency causes *pellagra*. Signs: skin rash on parts of body exposed to sunlight; diarrhoea; and mental changes leading to dementia. This occurs especially where maize and sorghum are the staples and there is a lack of other foods.

Niacin Deficiency – Pellagra

Butterfly sign

Casal's collar

A rash (dermatitis) which is on both sides of the body, and on skin normally exposed to sunlight is a sign of pellagra.

Check the face, neck, hands, arms and legs.

ICH/UNHCR MNDD Slide

Prevention involves ensuring that people receive or have access to a variety of foods that contain sufficient quantities of essential vitamins and minerals. This also includes fortified food items distributed in food aid, access to local markets, and produce from home gardens.

Treatment consists of administering therapeutic doses of the missing nutrients. The distribution of multi-vitamin tablets to the entire refugee population is a waste of time and money, since they contain insufficient quantities of individual vitamins to correct deficiencies.

Annex 7: Rapid assessment: measuring malnutrition

There are 3 major clinical forms of severe protein energy malnutrition - marasmus, kwashiorkor and marasmic kwashiorkor. There are various clinical signs useful for diagnosis, but most obviously a marasmic child is extremely emaciated and a child with kwashiorkor has bilateral oedema. However, clinical assessment is not practical for managing nutritional programmes and monitoring and comparing large-scale food crises. Most standardized indicators of malnutrition in children are based on measurements of the body to see if growth has been adequate.

- ◆ Height for age (H/A), is an indicator of chronic malnutrition. A child exposed to inadequate nutrition for a long period of time will have a reduced growth rate - and therefore a lower height compared to other children of the same age (stunting).
- ◆ Weight for age (W/A), is a composite indicator of both long-term malnutrition (deficit in height/"stunting") and current malnutrition (deficit in weight/ "wasting").
- ◆ Weight for height (W/H), is an indicator of acute malnutrition that tells us if a child is too thin for a given height (wasting).

For all 3 indicators (W/H, W/A, H/A), we compare individual measurements to international reference values for a healthy population (NCHS/WHO/CDC reference values).

In emergencies, W/H is the best indicator as:

- it reflects the present situation;
- it is sensitive to rapid changes (problems and recovery);
- it is a good predictor of immediate mortality risk; and
- it can be used to monitor the evolution of the nutritional status of the population.

Bilateral oedema is an indicator of kwashiorkor. All children with oedema are regarded as being severely acutely malnourished, irrespective of their W/H. Therefore, it is essential to assess W/H and the presence of bilateral oedema to define acute malnutrition.

Middle upper arm circumference (MUAC), is another anthropometric indicator. MUAC is simple, fast and is a good predictor of immediate risk of death, and can be used to measure acute malnutrition from 6-59 months (although it overestimates rates in the 6-12 month age groups).

However, the risk of measurement error is very high, therefore MUAC is only used for quick screening and rapid assessments of the nutritional situation of the population to determine the need for a proper W/H random survey.

UNHCR/UNICEF/WFP/WHO Estimating Food & Nutrition Needs in Emergencies, 2001*

Annex 8: Emergency phase action plan

PHASE I OF THE EMERGENCY	
From the outset and during initial stages of the emergency (i.e. during initial rapid assessments).	<ul style="list-style-type: none">⇒ Adopt the 2,100 kcal/person as a reference figure.⇒ Adjust 2,100 kcal figure based on information available immediately using the factors outlined in Section V.⇒ Ensure that food ration is adequate to address the protein, fat and micronutrient requirements of the population.⇒ Ensure that food ration is adequate to address the nutritional needs of all sub-groups of the population.⇒ Outline strategies for collecting information for making further adjustments.⇒ Food management issues are considered.⇒ Food-related conditions are considered.⇒ Monitoring system is established to ensure adequacy of the ration.
PHASE II OF THE EMERGENCY	
Situation stabilized	<ul style="list-style-type: none">⇒ Through periodic reassessment, further revision and adjustment of the reference figure based on additional information about all the factors affecting energy requirements specific to the situation (outlined in Section V).⇒ Plan for longer term assistance or phase out strategies.

ANNEX 9: Checklist for adjustments to the initial reference figure of 2,100 kcal

- Are the majority of the population undertaking strenuous physical activities such as carrying heavy loads over long distances?
- Is the average temperature significantly lower than 20°C?
- What is the prevalence of malnutrition among the population?
- Is the crude mortality rate (CMR) significantly higher than normal?
- Are there significant public health risks for the affected population?
- Is the demographic profile of the affected population as expected?
- Is the population receiving a regular supply of some food from other sources?
- What is the percentage of energy from protein in the ration?
- Is the energy obtained from fat at least 17%?

Situation

It is well known from experience that emergencies result in excess loss of life (high mortality) and increased incidence of diseases (high morbidity). In developing countries, the diseases mainly responsible for high mortality and morbidity are measles, diarrhoeal diseases (including cholera), acute respiratory infections (pneumonia), malnutrition and malaria. The factors which increase the risk of disease and which should be addressed in any emergency response include an unfamiliar environment, poverty, insecurity, overcrowding, inadequate quantities and quality of water, poor environmental sanitation, inadequate shelter and inadequate food supply.

Objectives

- To prevent and reduce excess mortality and morbidity and to promote a return to normalcy to ensure refugees' right to the highest attainable standard of physical and mental health.¹

Principles of response

- Priority should be given to a Primary Health Care (PHC) strategy which includes preventive and basic curative health services and integrate a multi-sectoral response with a strong vital sectors component including water, food, sanitation, shelter and physical planning.
- Refugee participation, in particular women, in the development and provision of health services is essential.
- All members of the population including groups with specific needs, women and men, girls and boys, ethnic and other minorities should have access to health services.
- Services provided for refugees should be at a level equivalent to that appropriate to host country nationals, i.e.

there must be parity - providing that minimum international and UNHCR standards are met.

- The health services must be of a quality that ensures that programmes, providers and institutions respect patients' rights and comply with nationally and internationally accepted health standards and principles of medical ethics.
- The health programme should also be sustainable. It is sometimes better not to start activities which cannot be maintained, than to cease supporting activities which both implementing partners and beneficiaries have taken for granted (of course this does not apply to vital activities or urgent life saving measures).
- Many countries will not have sufficient human and material resources to respond adequately to the extraordinary needs generated by an emergency. Experienced national and international Non-governmental Organizations (NGOs) should be mobilized to initiate urgent life saving measures and rapid integration with the Ministry of Health (MOH) is essential.
- Health services should take into account the particular vulnerability of children under five years old during emergencies. Priority should be given to the prevention and management of the five main causes of excess mortality and morbidity: malaria, acute respiratory infections, measles, malnutrition, diarrhoeal diseases.
- Health services should also take into account the special needs of women who play a central role as primary health care providers and also bear a disproportionate share of suffering and hardship. It includes a minimum package of reproductive health services, aiming in particular at reducing maternal and newborn mortality and morbidity and reducing the transmis-

¹ *International Covenant on Economic, Social and Cultural rights, 1966, Article 12.*

sion of Human Immunodeficiency Virus (HIV)². It should be implemented immediately.

- A UNHCR Health Coordinator should be appointed with responsibility for the health programme and for ensuring that national and international standards and best practices are adhered to, in close coordination with the national health authorities and other organizations.

Action

- Assess the health and nutritional status of the population by age and sex and identify the critical health risk factors in the environmental conditions.
- Establish priority needs, define the required activities to meet those needs and determine the required human, material and financial resources to perform these activities.
- In accordance with these activities, set up community-based health services and devise the appropriate organizational and coordination mechanisms with both the health partners and other relevant sectors of assistance.
- Promote basic health education for the refugees and train refugee health workers (50% women) and ensure female to female health services (including community health workers and midwives).
- Monitor and evaluate the effectiveness of the services and adjust as necessary.
- Ensure that decisions about the health services are based on proper assessment and surveillance, including participatory assessment.
- Communicate information about the emergency situation and the health services for advocacy purposes.

- Establish an early warning and surveillance system to detect outbreaks and prepare rapid response actions.

Introduction

1. Good health, depending as it does on so many non-medical factors, is too big a subject to be left only to medical workers. This chapter is directed at non-specialist staff in the field. It does not pretend to give “medical answers” to health problems. It does, however, seek to show that proper assessment of problems, needs and resources, appropriate organization and coordination of public health and medical services based on a Primary Health Care (PHC) strategy are more important to the overall health status of refugees than curative medicine alone. These crucial organizational factors are often the responsibility of non-medical UNHCR staff.

2. During an emergency, many refugees will be exposed to insecurity, poor shelter, overcrowding, a lack of sufficient safe water, inadequate sanitation, inadequate or inappropriate food supplies and a possible lack of immunity to the diseases of the new environment. Furthermore, on arrival, refugees may already be in a debilitated state from disease, malnutrition, hunger, fatigue, harassment, physical violence and grief. Poverty, powerlessness and social instability, conditions that often prevail for persons of concern to UNHCR, can also contribute to increased sexual violence and spread of sexually transmitted diseases including HIV.

3. The World Health Organization (WHO) has summarized the concept of Primary Health Care as follows: “PHC is essential health care made accessible to everyone in the country. It is given in a way acceptable to individuals, families and the community, since it requires their full participation. Health care is provided at a cost the community and the country can afford. Though no single model is applicable everywhere, Primary Health Care should include the following:

² Please refer to Chapter 19 for more information on HIV and Sexually Transmitted Diseases (STD)

- i. promotion of proper nutrition;
- ii an adequate supply of safe water;
- iii basic sanitation;
- iv reproductive and child care, including family planning;
- v appropriate treatment for common diseases and injuries;
- vi immunization against major infectious diseases;
- vii prevention and control of locally endemic diseases; and
- viii education about common health problems and what can be done to prevent and control them.

At the heart of such a strategy there is an emphasis on preventive, as against curative care alone.

Health assessment, planning, monitoring and surveillance

- ◆ An assessment of the health and nutritional status is an essential start to the provision of health services.
- ◆ This must be done by experts with experience of emergencies and, if possible, local knowledge.
- ◆ The factors affecting the health of the refugees must be identified and a surveillance and reporting system established.

Initial assessment

4. First, information should be obtained on the number of refugees³ segregated by age (percentage of children under five years old) and sex (male/female ratio). See chapter 10 on registration for more information on estimating the total number of refugees.

Age/sex breakdown can be estimated from:

- i. information collected during surveys;
- ii. information collected during mass immunization campaigns;

- iii. mass health screening on arrival; and
 - iv. information collected by community health workers.
5. The aim of the initial health assessment is to first define the level of the emergency, identifying basic problems and needs to establish priorities. It should be carried out by people with appropriate qualifications and relevant experience. There are obvious advantages in using national or locally-based personnel, but appropriate outside expertise can be made available quickly and should be requested through the Technical Support Section at Headquarters if necessary. Attention should be paid to gender balance among health staff.

6. The priority should be to evaluate the incidence of the major causes of excess mortality and morbidity – measles, diarrhoeal diseases, pneumonia, malaria and malnutrition; the availability and access to basic and emergency care and resources (in particular basic emergency obstetric care) and to identify the level of risk of a possible outbreak (cholera, malaria, meningitis, AHI (avian/human flu), VHF (viral haemorrhagic fever).

7. Relevant information can be obtained from:

- i. direct observation;
- ii. reviewing baseline information regarding the country/areas of origin and asylum;
- iii. analysing records at health facilities and interviewing health workers;
- iv. undertaking sample surveys (nutrition and mortality, i.e. retrospective mortality surveys) which must be done by experts;
- v. population estimation and registration (see chapter 10 on population estimation and registration); and
- vi. mass health and nutrition screening on arrival. This should focus on: (i) nutrition screening through visual inspection and measurement of the

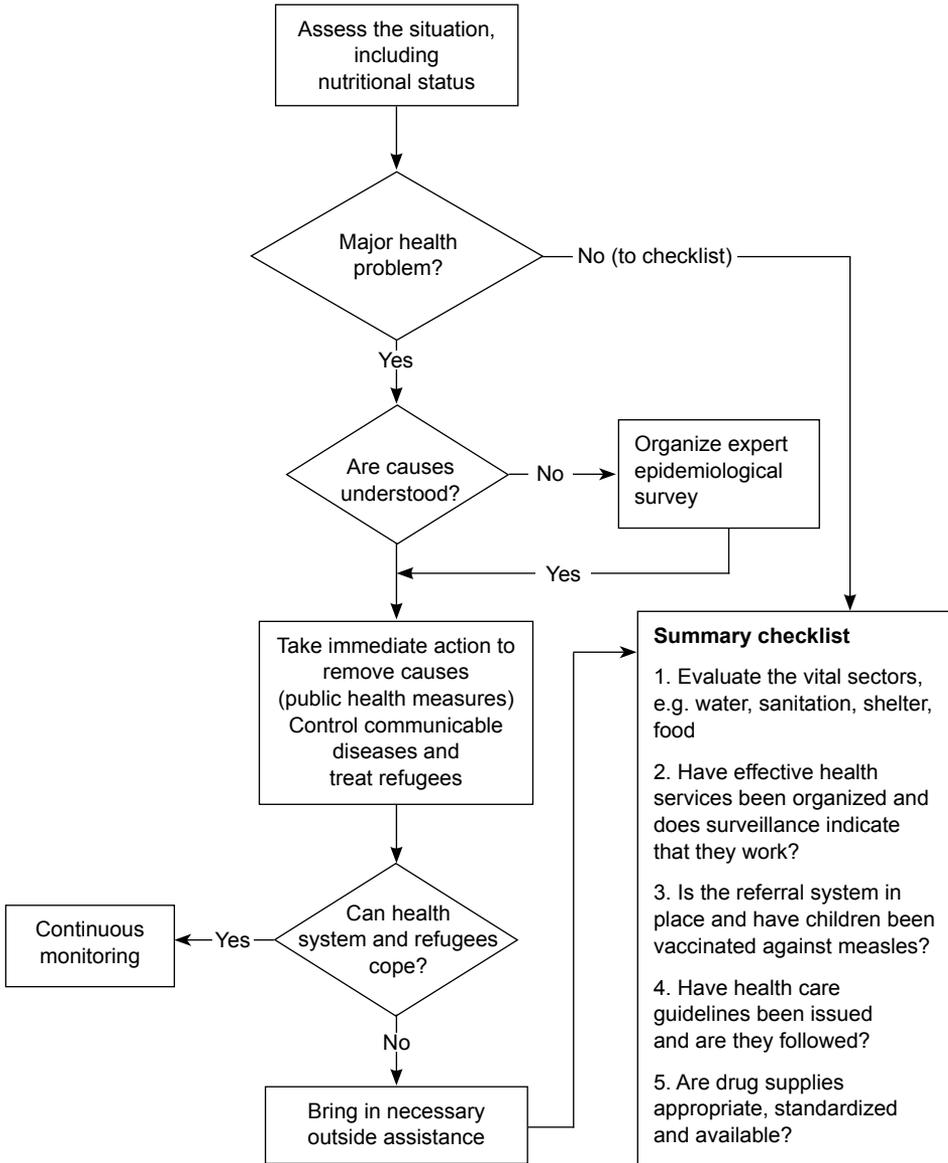

³ Health experts sometimes call this number “the denominator”.

Mid Upper Arm Circumference (“MUAC”), (see chapter 15 on food and nutrition), (ii) checking for communicable diseases and vaccination coverage, and (iii) identifying patients in need of urgent referral. It is

usually impractical to try to provide treatment in the screening line itself.

8. Figure 1 illustrates key management considerations for action in light of the initial assessment.

Figure 1 – Assessment and Response

Monitoring and surveillance: the health information system

9. The role of the health information system is to generate, analyse and disseminate health data. This is a continuous activity, conducted regularly and closely linked to public health decision-making and the implementation of programme activities. From the earliest stages of an emergency, a health information system should be put in place under the responsibility of the UNHCR Health Coordinator.

The objectives of any health information system are to:

- i. rapidly detect and respond to health problems and epidemics;
- ii. monitor trends in health status and continually address health-care priorities;
- iii. evaluate the effectiveness of interventions and service coverage;
- iv. ensure that resources are correctly targeted to the areas and groups of greatest need; and
- v. evaluate the quality of health interventions.

10. UNHCR website (www.unhcr.org/health) provides a number of tables and forms for collecting health related information. This chapter also contains reporting forms on mortality and morbidity. However, to have a more comprehensive idea of the situation, information regarding water, food, sanitation, shelter and availability of soap should also be collected and analysed (see the relevant chapters on water, nutrition, sanitation, and physical planning).

11. The health information system should be simple, reliable, and action oriented. The information to be collected should be adapted to suit the collectors' qualifications. Training in collection of information should be organized in a standard manner. Overly detailed or complex reporting requirements will result in non-compliance. In addition, only data that can

and will be acted on should be collected. Communication and exchange of views among all the actors in the health information system are essential to secure the functionality of the system.

12. A reporting calendar is essential to the function of the health information system. It should be standardized among all health partners at all levels of health management. Copies should be distributed throughout each camp and made easily visible to all staff. This calendar should specify the dates on which each week begins and ends; the last day of the week should represent the date on which daily information sources (daily sheets and registers) are compiled and reported using a Weekly Report Form.

13. Health information in the initial stages of an emergency should concentrate on:

- i. demography
- ii. mortality and its causes
- iii. nutritional status
- iv. morbidity

14. Only when the situation stabilizes can the system be made more comprehensive. After the emergency phase is declared over, the health information system should be expanded to include more detailed reporting and from a greater number of primary health sections (e.g. Inpatient Department and Referral Services, Expanded Program on Immunization (EPI), and more detailed Reproductive Health and HIV/AIDS information).

Information on mortality and morbidity should be collected as follows:

Mortality (death)

15. Each health facility should keep a log of all patient deaths with cause of death and relevant demographic information. This information should be summarized in tables (see tables 2.1 and 2.2 of Annex 1), reported centrally and consolidated with other data.

16. Because many deaths occur outside the health-care system, a community-based mortality surveillance system should also be established. This system requires identification of sites used as cemeteries, employing grave watchers on a 24 hours basis, routinely issuing burial shrouds, and using community informants. Deaths that occur outside hospitals, by unknown causes, should be validated through verbal autopsy by health workers specifically trained for this task.

17. Depending on the requirements of the health partner, certain primary causes of death should invoke a more detailed investigation of the exact cause and circumstances surrounding the death (see table 2.2 in Annex 1). The investigation should be led by a multi-disciplinary team comprised of health agency staff, UNHCR, government counterparts and community leaders. Guidance on when to begin an investigation into a death, the team composition, methods of enquiry, and the procedure for producing a final report should be clearly stated by each agency. The outcome should be documented in a narrative report, covering terms of reference that have been established in advance. Depending on the cause of death under review, the investigation may also be linked with wider outbreak alerts and response efforts [see paragraph on morbidity (illness)].

18. Death certificates should be issued by the health agency for every death reported within the camp. This acts as both a legal record of death and as a means of triangulating data within the hospital and community mortality sources. No burial should take place without evidence of a death certificate that has been issued by the main camp hospital/dispensary. This will help to prevent under-reporting of deaths that occur in the community but might not otherwise be reported to a health agency.

Morbidity (illness)

19. Each health facility providing out-patient services should report age, sex, and cause-specific data for each consultation. Information should be recorded systematically, using data sources and guidance that are standardized between health agencies.

Monitoring and surveillance

20. The principal source of routine monitoring in the out-patient department should be a daily tally sheet (see www.unhcr.org/health). Before any record is made, the clinical officer must first determine whether a patient is presenting with a new health problem ('New visit'), or is seeking treatment for a pre-existing health problem ('Revisit'). This distinction is critical to the correct calculation and interpretation of morbidity indicators at the end of each month. The definitions of these terms should be specified for each disease and health event under surveillance, and stated in clear, written guidelines that are available to all clinical officers.

21. Case definitions are an essential tool to any surveillance system. They state clear and objective criteria that must be met, before a diagnosis is reported. This guarantees consistency of reporting and helps to ensure that accurate and comparable morbidity data is collected and reported by all health partners. Definitions should be simple, clear and adapted to available diagnostic means. They should be adhered to by all agencies, and used by staff in all reporting facilities (including outpatient department [OPD], inpatient department [IPD] and laboratory). The case definitions of the Ministry of Health should be adopted where available; in their absence, standard WHO case definitions can be used but should be adapted according to the local context.

No diagnosis should be recorded unless it meets the case definition.

Health information systems

22. An early warning system for detection of outbreaks should be established within the routine health information system. All diseases of outbreak potential should be assigned a corresponding alert threshold, which defines the basis upon which an outbreak should be reported. As for all conditions under surveillance, the decision on which diseases are selected should be based upon epidemiological priorities in each country.

23. To promote a predictable and timely intervention once these thresholds are exceeded, the alert thresholds should be visible and easily referenced by all clinical officers. The number of reported cases should also be plotted in a graph at the end of each week. This graph is known as an epidemiological curve, and uses “Number of Cases” on the vertical axis and time in “Weeks” on the horizontal axis.

24. Trends in morbidity should be observed over time and monitored for any rapid or unusual increases that could signal instability and/or possible outbreaks. Historical data should be used to generate and update baseline information regularly in the graphs (e.g. for malaria and meningitis) to watch to see if these alert thresholds are exceeded.

25. Alert thresholds should be monitored per health facility on a daily and/or weekly basis, and an outbreak alert form (Annex 2) should be completed for each threshold that is exceeded. The triggering of an outbreak alert should lead to a number of pre-determined actions, which are familiar to all clinical officers and facility supervisors.

Outbreak preparedness plans should be established, including a system for early detection, investigation and response should be established, identifying key actors.

26. The daily Outpatient Department (OPD) Tally Sheet is a useful tool for condensing large volumes of consultation and

diagnosis data, and for facilitating the reporting of statistics each week. However, it does not replace the need to maintain detailed history and examination notes. These should be written legibly, in long-hand, in the individual patient records that are maintained by each health agency.

27. A summary of case-based information from each consultation should also be logged in an OPD Register. One register book should be kept in each consultation room within the outpatient department and should record information on the identity of the patient, presenting signs and symptoms, diagnosis and treatment, and necessary follow-up / admission details (see Annex).

28. The centralized summary of case-information within each register acts as a useful monitoring and evaluation tool. Health Managers should periodically audit the registers, to review diagnosis and prescription practices in each OPD and certify adherence to Standard Treatment Guidelines. The case-based information collected in the register also plays a crucial role in tracing individuals in the event of an outbreak and is an important reference for the completion of the line listing in the Outbreak Alert Form (see Annex 2).

29. In addition, the patient should be issued a health record card (or “Road to Health” card) on which the date, diagnosis, and treatment are recorded. The ‘Road to Health’ card provides a useful medical summary of a child’s health in the first five years of life. These are most important in a child’s development, and should be closely monitored to ensure timely detection of problems and early diagnosis and treatment. The card is given to mothers when their infant is born and should be updated regularly at the health unit, until the child is five years old.

30. The health information system should be periodically assessed to determine its accuracy, completeness, simplicity and timeliness. The way programme planners

and key decision-makers use the information should also be assessed. The system should evolve as the need for information changes (flexibility).

31. Camp and centrally controlled monitoring of health and nutritional status is essential if problems are to be identified in time to allow preventive and/or corrective actions to be taken and to adjust resource allocation. The refugees' health status should improve as public health services start to function adequately and the refugees adjust to their new environment.

32. However, a vigilant surveillance system must be maintained. Seasonal changes will affect health (for example temperature changes, and especially the rainy season) so seasonal variations in the incidence of disease will remain. The UNHCR Health Coordinator and her/his counterparts in the government and other partners will be responsible for the quality of this surveillance, the data required, who will interpret it and how, to ensure action on the results and feed-back to all actors.

Indicators

Mortality (death)

33. The most important and specific indicators of the overall status of the refugee population are the Crude Mortality Rate (CMR), for the whole population and Under-5 Mortality Rate (U-5MR) for children under five years old. These indicators are of crucial importance to managers of the operation and are also of great interest to the media, donors and relief agencies. A priority for the health surveillance system is to produce reliable information on death rates.

Crude Mortality Rate is deaths/10,000/day.

This is calculated as follows:

$$\frac{\text{Number of deaths} \times 10,000}{\text{Number of days} \times \text{total population}}$$

35. An emergency is defined by mortality rates double that of the baseline. Where baseline mortality of the population prior to displacement, or of the population in the host country, is known, then this figure should be used.

Table 1 – Crude Mortality Rate Benchmarks

Average rate in most developing countries	0.5 deaths/10,000/day
Relief programme: under control	<1.0 deaths/10,000/day
Relief programme: very serious situation	>1.0 deaths/10,000/day
Emergency: out of control	>2.0 deaths/10,000/day
Major catastrophe	>5.0 deaths/10,000/day

36. Where baseline mortality is not known, the figure of 0.5 deaths /10000/day (1/10,000/day under five) is used in developing countries. In this case, the objective of the overall assistance programme in the emergency phase should be to achieve CMR of <1/10,000/day and U-5MR of <2/10,000/day as soon as possible. These rates still represent approximately twice the “normal” CMR and U-5MR for non-displaced populations in most developing nations and should not signal a relaxation of efforts. Other situations are given in table 1A below (the Sphere Project, 2004 edition, page 261).

Table 1A: Baseline Reference Mortality Data by Region

Baseline Reference Mortality Data by Region				
Region	CMR (deaths/10,000/day)	CMR emergency threshold	CMR (deaths/10,000 U5s/day)	CMR emergency threshold
Sub-Saharan Africa	0.44	0.9	1.14	2.3
Middle East and North Africa	0.16	0.3	0.36	0.7
South Asia	0.25	0.5	0.59	1.2
East Asia and Pacific	0.19	0.4	0.24	0.5
Latin America and Caribbean	0.16	0.3	0.19	0.4
Central and Eastern European Region/CIS and Baltic States	0.30	0.6	0.20	0.4
Industrialised countries	0.25	0.5	0.04	0.1
Developing countries	0.25	0.5	0.53	1.1
Least developed countries	0.38	0.8	1.03	2.1
World	0.25	0.5	0.48	1.0

Source: UNICEF's *State of the World's Children 2003* (data from 2001).

37. Age and sex-specific mortality rates have to be collected systematically and may indicate the need for targeted interventions. Table 1 below shows some benchmarks for developing countries where baseline data is not known against which the daily Crude Mortality Rate (CMR) can be compared. Under-5 Mortality Rate benchmarks are usually twice the CMR.

Morbidity (illness)

38. Knowing the major causes of illness and the groups at greatest risk helps efficient planning of intervention strategies and the most effective use of resources.

Morbidity incidence is the number of new cases of a given disease among the population over a certain period of time, usually expressed 1,000/population. It is more useful to follow this than to keep a simple tally of cases, as trends can be followed over time, or compared with other situations. Morbidity incidence should be recorded as set out in Tables 3.1 and 3.2 of Annex 3.

39. The more common diseases are outlined in table 2 below which illustrates the environmental impact on disease and indicates those improvements in living conditions which will bear directly on the health of the refugees.

Table 2 – Common diseases

Disease	Major contributing factors	Preventive measures
Diarrhoeal diseases	Overcrowding, contamination of water and food Lack of hygiene	<ul style="list-style-type: none"> adequate living space public health education distribution of soap good personal and food hygiene safe water supply and sanitation
Measles	Overcrowding Low vaccination coverage	<ul style="list-style-type: none"> minimum living space standards as defined in chapter 12 on site planning immunization of children with distribution of vitamin A. Immunization from 6 months up to 12-15 years (rather than the more usual 5 years) is recommended because of the increased risks from living conditions
Acute respiratory infections	Poor housing Lack of blankets and clothing Smoke in living area	<ul style="list-style-type: none"> minimum living space standards and proper shelter, adequate clothing, sufficient blankets
Malaria	New environment with a strain to which the refugees are not immune Stagnant water which becomes a breeding area for mosquitoes	<ul style="list-style-type: none"> destroying mosquito breeding places, larvae and adult mosquitoes by spraying. However the success of vector control is dependent on particular mosquito habits and local experts must be consulted provision of mosquito nets drug prophylaxis (e.g. pregnant women according to national protocols)
Meningococcal meningitis	Overcrowding in areas where disease is endemic (often has local seasonal pattern)	<ul style="list-style-type: none"> minimum living space standards immunization only after expert advice when surveys suggest necessity
Tuberculosis	Overcrowding Malnutrition High HIV prevalence	<ul style="list-style-type: none"> minimum living space standards (but where it is endemic it will remain a problem) immunization
Typhoid	Overcrowding Poor personal hygiene Contaminated water supply Inadequate sanitation	<ul style="list-style-type: none"> minimum living space standards safe water, proper sanitation good personal, food and public hygiene and public health education <p>WHO does not recommend vaccination as it offers only low, short-term individual protection and little or no protection against the spread of the disease</p>
Worms especially hookworms	Overcrowding Poor sanitation	<ul style="list-style-type: none"> minimum living space standards proper sanitation, good personal hygiene wearing shoes
Scabies*	Overcrowding Poor personal hygiene	<ul style="list-style-type: none"> minimum living space standards enough water and soap for washing
Xerophthalmia Vitamin A deficiency	Inadequate diet Following acute prolonged infections, measles and diarrhoea	<ul style="list-style-type: none"> adequate dietary intake of vitamin A. If not available, provide vitamin A fortified food. If this is not possible, vitamin A supplements. immunization against measles. Systematic prophylaxis for children, every 4 - 6 months
Anaemia	Malaria, hookworm, poor absorption or insufficient intake of iron and folate	<ul style="list-style-type: none"> prevention/treatment of contributory disease correction of diet including food fortification
Tetanus	Injuries to unimmunized population Poor obstetrical practice causes neo-natal tetanus	<ul style="list-style-type: none"> good first aid immunization of pregnant women and subsequent general immunization within EPI training of midwives and clean ligatures, scissors, razors, etc.
Hepatitis	Lack of hygiene Contamination of food and water	<ul style="list-style-type: none"> safe water supply effective sanitation safe blood transfusions
STD's/HIV	Loss of social organization Poor transfusion practices Lack of information	<ul style="list-style-type: none"> test syphilis during pregnancy test all blood before transfusion ensure adherence to universal precautions health education availability of condoms treat partners

* *Scabies: skin disease caused by burrowing mites*

40. It is not possible to monitor everything to the same level of detail in a health information system. Each country must identify the priority diseases and health events that present the most significant threat to the health of the refugee and host population. The selection process must be done in coordination with UNHCR, Ministries of Health, and health implementing partners, and should take into account the following factors:

- i. Does it result in high disease impact?
- ii. Does it have a significant epidemic potential?
- iii. Is it a specific target of a national, regional, or international control program?
- iv. Will the information collected lead to public health action?

41. All health conditions selected for inclusion in the surveillance list should be assigned a case definition, and each should be mutually exclusive of one another.

Main health programmes

- ◆ The main causes of death and diseases in emergency situations in developing countries are measles, diarrhoeal diseases (including cholera), acute respiratory infections, malnutrition and malaria (where prevalent), in particular but not only among children.
- ◆ However reproductive health problems (in particular pregnancy and obstetric complications) are the leading cause of life loss among women 15 to 44 years old. Experience underlines the importance of meeting the reproductive health needs of refugees, and most particularly of women and adolescents.
- ◆ Priority should therefore be placed on programmes targeting the issues mentioned above.
- ◆ Other causes of morbidity include tuberculosis, meningitis, vector-borne diseases, sexually transmitted infections, HIV/AIDS.

- ◆ The psychological stress of displacement, often compounded by harassment, violence, fear and grief will impact on the mental and psychosocial health of the affected population.
- ◆ Early emphasis should be placed on correcting environmental factors which adversely affect health.

Priority health and nutrition activities are outlined in Box 1 (adapted from *Refugee Health*, MSF, 1997).

Curative care

42. Curative medical care is extremely important at the early stage, when refugees are most vulnerable to their new environment with the health hazards it poses and before it has been possible to achieve any major public health improvements. Curative services contribute to reduce the excess of loss of lives and create confidence among the refugees towards the health services.

Priority health and nutrition activities in emergencies

1. **Measles immunization:** at least 90% coverage for children aged 6 months to 14 years.
2. **Nutritional support:** including selective feeding programmes (Therapeutic Feeding Programmes for severely malnourished and Supplementary Feeding Programmes for moderately malnourished) where the prevalence of acute malnutrition is >10% among children 6-59 months (5% in the presence of aggravating factors) on baseline survey.
3. **Control of communicable diseases and epidemics:** outbreak response planning, controlling diarrhoea, measles, acute respiratory infections and malaria.
4. **Minimum initial services package for reproductive health:** nomination of a coordinator; prevention and response to gender-based violence; ensure adherence to universal precautions against HIV/AIDS; condom distribution; clean delivery and midwife kit distribution; planning for comprehensive RH services.
5. **Public health surveillance:** monitoring and reporting standardized health data using UNHCR's Health Information System; and core indicators as outlined in the UNHCR Standards and Indicators Guide.

43. Appropriate diagnosis and treatment protocols of major diseases must be defined in accordance with national protocols, if they are suitable to the refugee context. There may be some exceptions to this rule, but implementation of refugee specific protocols should always be previously agreed upon with national authorities.

44. Remember to take into account deaths occurring outside the health care system. A commonly documented error, committed by even excellent clinicians who have become absorbed in a health facility, is to fail to notice that cemeteries are being filled by refugees dying in their shelters, without having been identified or referred to receive appropriate curative services.

Immunization

45. Measles has been documented as being responsible for excess loss of lives, particularly but not exclusively among children under five years old. Measles has a high potential of outbreaks and mortality, mass vaccination of children against this disease is therefore a high priority: risk of outbreak is higher in crowded emergency settings, in large population displacement and in case of high malnutrition levels.

46. In some settings older children may have escaped immunisation campaigns and measles disease. This is the reason why immunization of all children under the age of 15 is recommended.

Immunization against measles for young children is the only essential immunization in the early stages of an emergency. Children 6 months to 15 years should be vaccinated in emergencies (rather than the more usual 5 years old). Infants vaccinated at 6 months old will need to be revaccinated once over 9 months old.

47. The decision as to whether to undertake a measles vaccination campaign at the onset of an emergency should be the responsibility of an expert. The campaign should ideally be associated with, but not

delayed by, distribution of vitamin A. The decision will be based on the vaccination coverage reported in the country and area of origin and its reliability, and if there has been a recent epidemic or vaccination campaign.

48. If there is a need for a measles vaccination campaign, it should not be delayed until other vaccines are available, and it should have appropriate mechanisms to ensure new arrivals are vaccinated. The provision of vaccines, vitamin A, cold chain and other equipment should be discussed with UNICEF (see the Memorandum of Understanding [MOU] between UNICEF and UNHCR, Appendix 3).

49. There are strong reasons, both medical and organizational, not to have a mass immunization programme with all vaccines. The most common causes of disease and death in the emergency phase cannot be cured or prevented by immunizations (except measles). Mass immunization programmes require a large number of workers, and vaccines need to be carefully handled and controlled, in refrigerated conditions. Therefore undertaking such a campaign may represent a misuse of time and resources in an emergency.

Expanded programme of immunization

50. As soon as the emergency has stabilized there should be a complete Expanded Programme of Immunization (EPI), which should form an integral part of the ongoing long-term health programme. A standard EPI includes diphtheria, pertussis and tetanus toxoid (DPT), oral polio (OPV), and BCG (Bacille Calmette-Guerin) vaccines as well as measles. However, there should not be a vaccination campaign against any of these (apart from measles), nor should there be a complete EPI, unless the following criteria are met: the population is expected to remain stable for at least 3 months; the operational capacity to administer vaccine is adequate, and the programme can be integrated into the national immunization programme within a

reasonable length of time (see the MOU between UNICEF and UNHCR).

Immunization records

51. It is essential that adequate immunization records be kept. At the very minimum, personal immunization (or “Road to Health”) cards should be issued. In addition, an independent central register of all immunizations is desirable, to enable analysis of vaccination coverage.

Communicable disease control⁴

- ◆ Emergency conditions, particularly overcrowding, poor sanitation and deficient water supply etc. will facilitate the spread of communicable diseases.
- ◆ The aim is to prevent, detect, control and treat diseases.
- ◆ Refugees are at greatest risk if they might be exposed to a disease against which they have not acquired immunity (e.g. measles, malaria etc.).
- ◆ During an emergency situation measures that may be put in place for preparation and response to a sharp increase in the number of cases of a disease are:
 - a surveillance system to ensure early warning;
 - close coordination of the response with the national authorities, WHO and partners as appropriate;
 - outbreak response plan;
 - standard treatment protocols;
 - stockpiles of essential treatment supplies;
 - operative laboratory; and
 - relevant vaccines identified if a mass vaccination campaign is required.

⁴ *Communicable disease control in emergencies, a field manual, 2005 WHO, Geneva.*

52. The main communicable diseases causing illness and death among refugees in emergencies are:

- i. measles
- ii. diarrhoeal diseases
- iii. acute respiratory infections
- iv. malaria (where prevalent)

Moreover, the interaction between malnutrition and infection, particularly among young children, contributes to increased rates of mortality.

53. Other communicable diseases – meningococcal meningitis,⁵ tuberculosis, sexually transmitted infections (STIs), hepatitis, typhoid fever, lassa fever and other haemorrhagic fevers, typhus and relapsing fever – have also been observed among refugee populations. However, the contribution of these illnesses to the overall burden of disease globally among refugees has been relatively small.

Diarrhoeal diseases

54. Diarrhoeal diseases represent a major public health problem and acute epidemics of shigellosis (causing bloody diarrhoea dysentery) and cholera,⁶ have become common in refugee emergencies and have resulted in excess loss of lives. In risk areas, it is essential to set up appropriate preventive measures as soon as possible. These measures include:

- i. adequate supply of potable water and an appropriate sanitation system;
- ii. provision of soap and education on personal hygiene and water management;
- iii. promotion of food safety and breast-feeding;

⁵ *See World Health Organization. Control of Epidemic Meningococcal Disease: WHO Practical Guidelines 2nd edition, 1998.*

⁶ *First steps for managing an outbreak of acute diarrhoea, 2003. WHO, Geneva; Acute diarrhoeal control in complex emergencies, critical steps, 2004. WHO, Geneva; Cholera outbreak: assessing outbreak response and improving preparedness, 2004. WHO Geneva.*

- iv. reinforced home visiting and early case detection; and
- v. identification of an area (“cholera management unit”) to manage patients with cholera in case an epidemic occurs.

It is essential to stockpile the basic medical supplies for a rapid response (Ringer lactate, SROs, adequate antibiotics...)

55. It is not possible to predict how a cholera outbreak will develop. If proper preventive measures are taken less than 1% of the population should be affected. Usually however, 1 to 3% are affected but in extreme cases it can be more – even as much as 10%.

56. To be prepared to respond quickly to an outbreak, the above preventive measures should be accompanied by the establishment of appropriate protocols on case management. These protocols should be based on National or WHO protocols and should be founded on rehydration therapy, continued feeding and appropriate antibiotics (especially for shigellosis).⁷ In addition, there should be a reliable surveillance system for early detection of cholera cases, to follow trends and determine the effectiveness of specific interventions.

57. A significant amount of material, financial and experienced human resources are likely to be needed to respond to a cholera outbreak and reduce the case fatality rate.

58. To facilitate an immediate response, cholera kits can be obtained from the Supplies Management Service at Headquarters at short notice. Each kit can cover the overall management of some 500 cases. There is some experience in using an oral cholera vaccine to prevent outbreaks in emergency settings, but its use is only appropriate in specific circumstances and expert guidance should be sought.

⁷ See World Health Organization. *Guidelines for the control of Epidemics due to Shigella Dysenteriae Type 1, 2005*

Measles

59. WHO has classified refugees and displaced populations, especially in camps, as groups at highest risk for measles outbreaks. Indeed, this disease has been devastating in many refugee situations. Measles vaccination coverage should be as close as possible to 100% (and must be greater than 90% to be effective). If not, measures should be taken immediately to control the situation (see the MOU between UNICEF and UNHCR and paragraphs on immunization above).

Malaria

60. Malaria is one of the major causes of illness and death in populations coming from, passing through, or arriving in a malarious area. Effective treatment and prevention will require expert advice.⁸

61. Treatment

- i. The mainstay of response in an emergency is prompt access to effective treatment. Health education to the population on seeking care in time should be a priority.
- ii. In emergency settings endemic for falciparum malaria,⁹ first-line treatment should usually be with artemisinin-based combination therapy (ACT). These drugs are rapidly effective in most settings. If the national protocol is not based on recent efficacy data, interim protocols will need to be established for the emergency setting, in collaboration with the national health authorities.
- iii. Diagnosis of falciparum malaria should be laboratory confirmed (except during confirmed malaria epidemics). Rapid tests should be used in most settings.

⁸ *Malaria control in complex emergencies: An Inter-Agency Field Handbook 2005, WHO*

⁹ *Falciparum malaria is the most dangerous form of malaria and is the most common form in most sub-saharan African countries.*

- iv. All pregnant women, severely malnourished children, and those with suspected HIV/AIDS attending health facilities should be actively screened for malaria (usually using rapid tests).
- v. Active fever case findings in the community should be instituted for all pregnant women and children under five as soon as possible.

62. Prevention

- i. Sites should be selected away or upwind from potential breeding sites, and site planning should ensure adequate drainage to prevent the development of breeding sites for malaria transmitting mosquitoes.
 - ii. Insecticide treated nets (preferably long-lasting insecticidal nets that do not need retreatment) should be fitted to all inpatient beds in clinics, hospitals and therapeutic feeding centres.
 - iii. Other chemical control measures such as insecticide treated nets, or indoor residual spraying, may seem quite attractive but should only be taken upon expert advice as several factors must be considered such as: the habits of the refugees, seasonal variations, mosquito biting habits, transmission levels, national protocols about chemicals and registered lists of chemicals and cost. Please see chapter 15 on sanitation and hygiene for guidance on vector control.
 - iv. During an emergency in sub-Saharan Africa, insecticide treated nets could be considered for distribution among the beneficiary population provided that: good access to diagnosis and treatment is already in place; transmission intensity is moderate to high; nets are stockpiled in advance; the community is already familiar with sleeping under nets; indoor residual spraying is not being conducted in the same shelters; and there is adequate access to food. Coverage of greater than 60% of households will have a protective effect for the community, less than this the nets will have an individual protective effect.
 - v. During an emergency in sub-Saharan Africa, indoor residual spraying can be considered provided that: there is adequate insecticide, water, equipment, trained staff, a well organized implementation plan, training and supervision; and adequate time for implementation ahead of the rainy season. Experience from UNHCR programmes shows that implementation is usually too late to be effective following the onset of the malaria transmission season.
 - vi. Intermittent preventive treatment in pregnancy should be implemented according to national policy. Where there is moderate to high transmission intensity, antenatal services are established and the drug (“sulfadoxine-pyrimethamine”) remains moderately efficacious.
 - vii. Prevention strategies not usually recommended for malaria control in emergencies are larvaciding, brush cutting and space spraying.
 - viii. New tools including other insecticide treated materials (e.g. plastic sheeting) are under investigation but are not yet accepted for use as standard emergency response.
63. In the early stages of an emergency, those most at risk of severe illness and death should be targeted first:
- i. **Priority 1:** pregnant women, severely malnourished (admitted to Therapeutic Feeding Programme) and children under 2 years old.
 - ii. **Priority 2:** children under 5, moderately malnourished (admitted to Supplementary Feeding Programme) and people with known HIV infection or clinical suspicion of AIDS.

Acute respiratory infections

64. Pneumonia is the acute respiratory

infection that has been documented as a cause for excess mortality, most particularly in the under five population. It is therefore essential to make sure that refugees are provided with adequate shelter and blankets as soon as possible. Health staff must be appropriately trained to diagnose and treat respiratory infections.

Reproductive health¹⁰

65. Reproductive health care in refugee situations should be provided by adequately trained and supervised staff and should be guided by the following principle:

- **Reproductive health care should be available in all situations and be based on refugee, particularly women's, needs and expressed demands.**
- **The various religious, ethical values and cultural backgrounds of the refugees should be respected, in conformity with universally recognized international human rights.**

66. The provision of quality reproductive health services requires a collaborative effort by a number of sectors (health, community services, protection, education) and organizations, which should provide reproductive health services based on their mandates.

67. While resources should not be diverted from addressing the problems of the major killers (measles, diarrhoeal diseases, acute respiratory infections and malaria), there are some aspects of reproductive health which must also be dealt with in the initial phase of an emergency. The Minimum Initial Service Package (MISP) is a series of objectives and actions needed to respond to the reproductive health needs of populations in the early phase of a refugee situation. Documented evidence of its efficiency justifies its use without prior needs assessment. The major objectives

of reproductive health care in an emergency are to:

- i. ensure a coordinated response to reduce reproductive health related morbidity and mortality by identifying an organization and a person responsible to facilitate the coordination and implementation of reproductive health activities;
- ii. prevent excess neonatal and maternal morbidity and mortality by providing clean home delivery kits, ensuring clean and safe deliveries at health facilities and managing emergency obstetric complications by establishing a referral system;
- iii. prevent and manage the consequences of gender-based violence;
- iv. reduce HIV transmission, by enforcing respect of universal precautions¹¹ and guaranteeing the availability of free condoms; and
- v. plan for the provision of comprehensive reproductive health services to be integrated into primary health care, as soon as possible.

68. As soon as it is feasible, when the situation has stabilized, comprehensive reproductive health services based on the needs of refugees should be put in place. These services should be integrated within the primary health care system and should address the following aspects:

Safe motherhood

69. Maternal and neonatal deaths can be prevented:

- by reducing delays in (1) recognising a complication, (2) seeking care, and (3) reaching a facility;

¹⁰ See: *United Nations High Commissioner for Refugees: An Inter-Agency Field Manual on Reproductive Health in Refugee Situations, 1999.*

¹¹ "Universal precautions" means procedures and practices by health workers to limit transmission of disease.

- by having access to skilled attendants¹² and comprehensive emergency obstetric care;
- by supporting breast-feeding and essential newborn care; and
- by preventing unwanted and mistimed pregnancies.

Services should cover antenatal care, delivery care, post-natal care as well post-abortion care.

70. All pregnant women should receive antenatal care services at least 3 times during pregnancy. Antenatal services should include routine medical assessment, detection and management of complications, preventive medical treatments, tetanus immunization, nutritional and health promotion, as well as systematic syphilis screening.

71. All deliveries should be accompanied by a trained health care provider (nb: Traditional Birth Attendants [TBAs] are not considered as trained health care providers and their intervention should be limited to community-based preventive and support services) and a referral system to manage obstetric emergencies should be put in place.

72. Within the first 4-6 weeks, mothers and their newborn should visit the health services and receive nutritional supplements, support for breast-feeding, counselling on infant health and nutrition and family planning (see paragraph on family planning). Women who have complications, such as spontaneous or unsafe abortion should be cared for by the referral system.

¹² *Traditional Birth Attendants (TBAs) are not considered as a skilled attendant. They should not be supported to attend deliveries. However they should be supported and trained to perform health and hygiene promotion, immunization promotion, breast feeding support, and other activities to promote healthy and health seeking behaviour.*

Family planning

73. Women who give birth more than 4 times face dramatic higher maternal risks.

Family planning can prevent 25-30 percent of all maternal deaths fighting the 4 too rule: too young, too old, too many, too close together. Furthermore, spacing pregnancies more than 2 years increases child chances of survival.

74. Family planning services should be initiated as soon as feasible, the first intervention being to ensure continuity of family planning supplies for those men, women and couples already using a method.

75. Information, education and communication should be designed by and for the refugees according to their culture and knowledge, but without taboo and in an open and respectful manner.

76. Family planning methods need to be easily and confidentially accessible, and diversified ensuring that refugees can make an informed and free choice in child spacing matters.

Prevention and response to sexual violence

77. Sexual and gender-based violence (SGBV) prevention and management requires a coordinated multi-sectoral team approach involving refugees. Education, information, communication, protection and comprehensive response are paramount in addressing the different SGBV issues in a culturally sensitive manner, and respect of children, women and men's rights prevail. Please refer to chapter 18 on SGBV.

78. In situations which may give rise to SGBV, the following measures may be considered in addition to actions to address the specific causes of the problem:

Policy and management:

- Include SGBV management in health coordination meetings and ensure that refugees are informed of the availability of services.

Medico-legal:

- Document case respecting survivor wishes and confidentiality (including medical report).
- Collect, label and store forensic evidence.

Medical:

- Prevent unwanted pregnancy through emergency contraception.
- Prevent HIV transmission with PEP.
- Provide wounds and injuries care.
- Prevent sexually transmitted infections (STIs) transmission with medical treatment.
- Prevent tetanus and hepatitis B through vaccination.
- Provide follow-up care.

Psychosocial support:

- Provide counselling and treatment for psychological trauma.

Other reproductive health concerns

79. Programmes to eradicate harmful traditional practices, including female genital mutilation, should be implemented once the situation has stabilized. It is crucial to work closely with the refugee community in tackling this issue.¹³

80. Culturally appropriate sanitary supplies should be distributed to women as soon as possible. Inadequate sanitary protection may prevent women from collecting material assistance.

81. Health workers should pay particular attention to meeting the reproductive health needs of young people as they may be at greater risk and have more limited access to appropriate services.

82. It is important to ensure that sufficient female health workers are trained in reproductive health in order to provide culturally appropriate health services, including education within the community and at the health facilities. At least some of these health workers should be recruited from among the refugee community.

Tuberculosis control¹⁴

83. The prevalence of tuberculosis (TB) has significantly increased world-wide, however, a TB control programme is not a priority in the early stages of an emergency when mortality and malnutrition rates are very high and the situation is still unstable.

84. Expert advice and involvement of the national TB control programme (often supported by WHO) are needed before starting a TB programme. Bad planning and poor implementation could result in more harm than good.

85. TB treatment takes many months. To increase the chances of success, TB programmes should only be started in stable situations, that is, when Directly Observed Therapy¹⁵ can be implemented, and when funds, drugs, reliable laboratory services and trained staff are available. Programmes should be expected to remain stable for at least 9 months. Interruption to treatment creates drug resistance, a public health menace.¹⁶

Mental health¹⁷

86. The psychosocial needs of refugees have often been neglected or even forgotten. However, health services should aim

¹⁴ World Health Organization and United Nations High Commissioner for Refugees: *Guidelines for Tuberculosis Control in Refugees and Displaced Populations*, 2006.

¹⁵ *Directly Observed Therapy is where the health worker is able to observe the treatment including that the medication is taken correctly.*

¹⁶ *Guidelines for TB control among refugees and displaced populations, 2005, WHO, Geneva.*

¹⁷ World Health Organization and United Nations High Commissioner for Refugees *Manual of Mental Health of Refugees*, 1996.

¹³ See IOM/FOM (83/97; 90/97), *Policies on Harmful Traditional Practices*, UNHCR, 1997.

to promote the highest standard of both physical and mental health. It is easy to recognize that there is a heavy burden placed upon refugees from, for example, physical violence, grief and bereavement, fear and stress, an uncertain future and a sense of powerlessness.

87. During the acute emergency phase,¹⁸ mental health issues should be addressed primarily through social interventions and linkages should be made with protection and community services sectors. Interventions should not interfere with basic service provision. Adequate, culturally appropriate and gender sensitive provision of food, water, shelter, clothing, and primary health care services should be ensured. Shelter should be safe and arranged to keep family groupings intact (see chapter 12 on site selection, planning, and shelter). Communities must be consulted in decisions about camp layout, which should include cultural, religious and recreational spaces. Appropriate recreational activities should be introduced (avoid distribution of goods that were not available before the emergency such as teddy bears or plastic toys). Community members should be involved in common activities such as food distribution, vaccination programmes, organizing shelter.

88. Social interventions during the emergency phase may include:

- i. re-establishment of cultural and religious events, including grieving rituals;
- ii. avoidance of disposal of dead bodies in an unceremonious manner. In most settings, dead bodies will not carry risks of communicable disease transmission;
- iii. dissemination of simple and empathic information about the emergency, relief efforts, and if possible location of relatives;

¹⁸ WHO *Mental Health in Emergencies, Mental and Social Aspects of Health of Populations Exposed to Extreme Stressors*, 2003.

- iv. family tracing;
 - v. briefing of field officers, health workers, food distribution workers, community services workers, and registration workers on grief, disorientation and the need for active participation (including vulnerable groups); and
 - vi. dissemination of empathic information on normal stress reactions and expectation of natural recovery (avoiding mention of abnormal reactions as this may have negative consequences).
89. The health sector should provide:
- i. essential psychotropics at the primary health centre level in the management of urgent psychiatric complaints (e.g. dangerousness to self or others, psychoses, severe depression, mania);
 - ii. ‘psychological first aid’ (empathetic listening, provide company, encourage but do not force social support) and individual psychological debriefing that pushes people to talk may have negative consequences and should be avoided.
90. As the situation stabilizes, outreach psychosocial activities can be expanded (including engagement of community leaders and traditional healers), community workers trained in core psychosocial and mental health skills, referral networks established, and health workers trained and supervised in basic mental health knowledge and skills.¹⁹

Capacity building: health education

91. The importance of health education is widely recognized. However, there are significant difficulties in persuading those most at risk to change long-established habits.

In the emergency phase, the priority topics should be those directly related to the immediate public health problems.

¹⁹ *Mental Health of Refugees*, 1996. WHO/UNHCR, Geneva.

92. Health education should therefore focus on the disposal of human excreta and refuse, water management and personal hygiene. Many governments and organizations produce simple health education materials that may be useful. Trained refugee teachers and respected elders are likely to be more effective than outsiders in communicating the basic principles and practices of health to their own people. At a later stage, information, education and communication should also be a major tool for the prevention and reduction of sexually transmitted diseases, including HIV.

Training

93. As suggested by the definition of an emergency, extraordinary mobilization of resources, including human, will be needed to cope with the situation. Annex 4 sets out a suggested structure of the health service and numbers and qualifications of staff needed. Full staff support including health workers, doctors and nurses at health centres, community health workers and health posts and clinics, with the necessary qualifications and experience, will not be instantly available.

Training will be a cornerstone of an effective health and relief programme.

94. Training activities must be well targeted to meet the objective of the programme, and this is dependent on the definition of roles and responsibilities among various levels of health care and identifying the necessary qualifications. Training must be part of the main health programme.

Medical supplies

95. Decisions concerning drug and medical supplies procurement should follow UNHCR guidelines.²⁰ The Technical Support Section and the Supplies Management Section at Headquarters issued an essential drugs list, which is used to order

drugs for UNHCR operations. The essential drug list and the procurement guideline aim to ensure a supply of safe, effective and affordable drugs to meet priority needs of the refugees.

96. In order to foster the appropriate use of drugs, standard treatment protocols should be established. This will help rationalize prescription habits among the various partners and organize training activities. Protocols are usually based on national standards.

97. In the early stage of an emergency, it is often useful to resort to pre-packaged emergency health kits. The best known is the Inter-Agency Emergency Health Kit which has been developed through collaboration among many agencies (WHO, UNICEF, MSF, ICRC, UNHCR and others, see www.who.int/medicines for updates). The contents of the kit are intended to cover the needs of 10,000 people for 3 months during an emergency. The kit can be obtained at short notice through the Supplies Management Section at Headquarters and can be used at the community level of health care and at health centres. The emergency health kit should only be used at the early stage of an emergency and not relied on for longer term needs.

98. Reproductive Health Kits for Crisis Situations also exist. These have been designed by members of the Inter-Agency Working Group on Reproductive Health to complement the Emergency Health Kits. The Reproductive Health Kits are available through the United Nations Population Fund (UNFPA) [see Reproductive Health Kits for Crisis Situations, UNFPA, updated 2005 or www.unfpa.org for more details]. In many situations UNFPA will provide these supplies free of charge to UNHCR operations as part of the Memorandum between UNHCR and UNFPA through the national UNFPA office or the HIV/AIDS Unit at Headquarters.

99. As soon as possible, arrangements should be made for a regular supply of

²⁰ UNHCR Drug Management Guideline, 2005.

appropriate quantities of essential drugs from the UNHCR essential drugs list. The requests should be based on epidemiological surveillance and disease patterns. The Supplies Management Section can also provide support for the purchase of quality assured drugs and their transport to the field. Local purchase is usually not indicated unless drug quality procedures are followed.²¹

100. It is of utmost importance to establish a system to monitor drug consumption and ensure drug quality. In major operations, a full-time pharmacist may be needed to work with UNHCR. Over-prescription of medicines by health workers following pressure by refugees is not uncommon in refugee emergencies.

101. Donations of unsolicited drugs are often a problem during emergencies. A number of agencies (UNDP, UNHCR, UNICEF, WHO, MSF and others) have jointly developed guidelines on drug donations²² that provide donors and users with a list of drugs and supplies, which can be sent to emergency situations. This is to help ensure that personnel in the field do not waste time sorting out “useless” donations (small quantities of mixed drugs, free samples, expired medicines, inappropriate vaccines, and drugs identified only by brand names or in an unfamiliar language). UNHCR’s policy is that overseas medical supplies should be sent only in response to a specific request or after expert clearance. The WHO Representative, local diplomatic missions and all others concerned should be briefed accordingly.

Laboratory services

102. Refugees are often remote from laboratory facilities. However, very simple laboratory services at the site level

are usually adequate. Simple to use rapid tests should be used to aid in the diagnosis of important diseases. Rapid tests are available for diseases including malaria, typhoid, meningitis and hepatitis.

103. Reference laboratory services are required for epidemic management and control, (e.g., meningitis, shigellosis, cholera, hemorrhagic and relapsing fevers, high malarial endemicity, hepatitis etc.) to confirm/clarify diagnosis and perform antibiotic sensitivity. This should be discussed with the national authorities and WHO. Where blood transfusions are provided, laboratory services will be absolutely essential to test all blood for HIV, syphilis and hepatitis before transfusion.

Organization of refugee health care

- There is no single model for organizing health services in refugee situations, but it is usually structured on three levels: community health posts and clinics, health centres, and referral hospitals.
- It is of the utmost importance to ensure good communication and feed-back between the various levels of health care.
- Priority should be given to using host country health facilities as referral centres and support should be agreed upon and provided to the facilities (see MOU between WHO and UNHCR).

Introduction

104. The four levels of health care are summarized in Annex 4. The first level is at the community level with outreach services. At the second level is a health centre with basic facilities for outpatient departments, dressings and injections, and a pharmacy. At the third level is a central health facility with outpatient and inpatient departments. At the fourth level is a referral hospital for emergency obstetric care and surgery, management of very complicated cases, performance of

21 UNHCR Essential Drugs Manual, 2006.

22 WHO, Guidelines for Drug Donations, May 1996.

laboratory tests etc. Referral hospitals are usually national facilities at the district, regional or national level.

105. The refugees must have easy and equitable access to effective treatment for diseases of public health importance. If the local national health facilities cannot be strengthened to meet the needs, alternative arrangements will be required. Unless treatment is provided at the right level, the hospitals or health centres will be swamped by refugees demanding treatment for simple conditions. Thus, a community-based health service is required that both identifies those in need of health care and ensures that this is provided at the appropriate level. Close coordination with community services is essential.

106. Health services utilization and quality should be monitored. Key indicators are:

- i. **Consultation rate:** number of new visits/refugee/year to outpatient services, usually around 4 in an emergency setting. If higher this may suggest over-utilization, if lower this may suggest that services are not readily accessible.
- ii. **Number of consultations per clinician per day (outpatient care):** If the number exceeds 50 consultations per clinician per day, corrective measures should be taken.

Community level health care

107. Whether refugees are in camps or spontaneously settled among local villages, community level services are essential.

Community-level health care must be the mainstay of health services from the very beginning of the emergency.

108. Outreach services can be delivered by Community Health Workers (CHWs) and Traditional Birth Attendants (TBAs). TBAs might be recruited among traditional midwives in the community. Evidence

shows that to decrease maternal deaths, deliveries should be conducted in health facilities with trained health assistants and not by TBAs. In order to be effective, CHWs and TBAs must be trained, supported and closely supervised. The role of CHWs and TBAs includes:

- i. home visiting, identification and referral of sick people and malnourished children;
- ii. identification of pregnant women and referral for antenatal, delivery and post natal care;
- iii. basic health and nutrition education (including breast-feeding support);
- iv. data-gathering for the health information system (deaths and their causes and the incidence of major communicable diseases); and
- v. responding to the needs of refugees who have been sexually assaulted, referring promptly for medical and other care.

As a guide, 1 CHW per 500-1,000 population and 1 TBA per 2,000 population should be the goal. Ideally, 50% of those trained should be women as same sex care is often preferred.

The primary health centre

109. There should be a health centre for each refugee settlement (approximately 10,000 people). Very large settlements may require more than one. The health post centre should be a simple building with facilities for consultation, basic curative care (drugs from the New Emergency Health Kit), oral rehydration therapy, clinical procedures such as dressings (but not injections because of the risks of HIV transmission), a small lock-up pharmacy, simple equipment and sterilization facilities (electricity may not be available), data collection (log books to record patients and activities). Water and sanitation and equipment for universal precautions are essential in all health facilities.

110. An indication of the number and qualifications of health staff required is given in Annex 4.

The central health facility

111. A central health facility providing 24 hour service, inpatient and outpatient facilities should serve each population of approximately 50,000. Adequate infection control must be ensured. Basic laboratory facilities may be available. Indicative staffing levels are given in Annex 2. The central health facility should also organize the main health programmes (EPI, reproductive health) and the supervision and training of staff (at both first and second level).

Referral services

112. The health centre must be able to refer patients to hospitals for treatment. Referral hospitals should provide emergency obstetric and surgical care, treatment for severe diseases, laboratory and x-ray services as well as supply and support for nationally controlled programmes (TB, leprosy, HIV/AIDS).

113. Refugees should have access to treatment equivalent to that of the majority of the local host population. Expensive interventions that are inaccessible to the majority of the population or of limited success should not be supported.

114. Only a small proportion of patients will require referral services. These services will usually be organized in national health facilities at the district, regional or national level, and ideally, referral should be made to the nearest national hospital. This has obvious advantages, not least the fact that the infrastructure already exists.

Community-level health care must be the mainstay of health services from the very beginning of the emergency.

115. The hospital(s) should be expanded or supported as necessary, for example with tents and additional health person-

nel as well as some financial and/or material support (drugs, supplies, food). Care must be taken not to swamp the local hospital. Close and direct coordination with the district or regional medical officer is essential.

116. An agreement should be signed between the parties, under the aegis of the Ministry of Health, which clarifies the conditions of assistance including cost per patient per treatment, conditions to be referred and in-kind support (food and drugs). A written agreement is essential to avoid controversies.

117. It is only in certain circumstances that special refugee hospitals will need to be established, but generally this should be avoided. They should only be established when the needs cannot be met by existing or strengthened national hospitals, for example when refugee numbers are very large (much larger than the local population), when the nearest national hospitals are too far away, or for security reasons. The Supplies Management Section and the Technical Support Section should be consulted prior to establishing or acquiring refugee specific field hospitals.

118. Whatever arrangements are made for hospital treatment and referral, there must be suitable transport to and from the referral hospitals. Facilities at the hospital must also provide for the needs of relatives and allow parents to be with young children.

119. Arrangements for referral must be such that only those patients specifically referred from the health centres are attended to, with no refugees presenting themselves directly to the hospital.

120. Refugee emergencies are not usually characterized by large numbers of injured persons. However, when this is the case, there may be an initial requirement for the rapid deployment of a surgical unit which is normally quickly available. Pre-packaged (expensive) surgical kits can be

obtained through Supplies Management Section at short notice.

121. The UNHCR Health Coordinator should ensure that there is a system to record referrals and subsequent treatment and follow-up of the patients.

Human resources and coordination

- The health services must be developed with and not just for the refugees and in accordance with their needs and demands.
- The early appointment of a suitably experienced health coordinator to UNHCR's staff has proved essential. A reproductive health focal point should also be identified as early as possible.
- While the use and development of local expertise is preferable, it is often necessary to mobilize outside assistance in an emergency.
- The issue of staff salary and incentives should be discussed and solved from the outset.
- The Ministry of Health at all levels must be as closely involved as possible.

The refugees

122. Participation by women and men, girls and boys is essential from the outset. From the beginning, health services should be developed and operated together with, rather than for, refugees or displaced populations. Health programmes must address and incorporate community knowledge, attitudes, behaviours and practices. Outside health workers must understand the refugees' own concepts of health and disease. If not, the services will be less effective, may be distrusted and poorly used, and are unlikely to be sustainable.

123. In emergencies preventive and curative health services should be provided free of charge to refugees and displaced populations. Evidence has shown that systems of 'cost recovery' in develop-

ing countries at best recover 5% of costs, and act as barriers to those most in need of health services. Local populations living nearby may also be extended free-of-charge services, and this should be negotiated with the health authorities in line with national policy.

Staffing needs

124. As a general principle, the order of preference for selecting health personnel, in cooperation with the national authorities, is:

- i. refugees
- ii. experienced nationals or residents
- iii. outsiders

Most emergencies will require some combination of these sources. Efforts should be made to ensure gender balance and same sex services.

125. Strong emphasis should be placed on the training, supervision and upgrading of medical skills of selected refugees, particularly in their former roles within the community. When selecting refugees, care must be taken to include women who may not come forward as readily as men. Full account should be taken of the experience of the traditional healers and midwives. Refugees may seek traditional treatments and experience has demonstrated the advantages of encouraging traditional methods of health care which complement other organized health services.

126. An important consideration may be the government's attitude to foreign medical personnel, including, for example, recognized qualifications and permission to practice medicine.

127. The issue of staff salary and incentives should be addressed at the onset. All agencies and organizations involved in the refugee programme should adhere to the same standards. The determination of salaries and incentives should be based on the national (or country of origin) stand-

ards and due account should be taken of assistance (free food, water, shelter etc.) received by refugees. In principle, all staff performing work on a daily basis, with clearly identified responsibilities and strict working hours, should receive a salary or an incentive.

128. Special attention should be given to the recruitment of local staff. The salary or incentive offered to them should be in line with national standards. Very frequently refugee emergencies attract national personnel working in the public and private sector (commonly referred to as “brain drain”) to the detriment of these services which can create serious tension.

The national health authorities

129. Early involvement of the host government’s central, provincial, and district health services is essential. To the extent possible, services provided to refugees should be integrated with national services. It will be particularly important to ensure integration and compatibility with certain treatment protocols, immunization programmes, communicable disease control and surveillance practices. Promoting good health for the refugees is clearly in the interest of the local population. In addition, supporting existing structures will help ensure that health services for refugees are sustainable and are at a standard equivalent to that of the host country nationals.

130. In major emergencies, (e.g. when there are disease outbreaks/many partners/large population numbers involved) UNHCR must ensure that a Refugee Health Coordinator is appointed. The Health Coordinator should be a key member of the UNHCR programme staff. The person should take the lead role in this sector, or play a key supporting role to the national institution which takes the lead role.

131. The Health Coordinator’s primary responsibility will be to ensure that the level and quality of services provided ad-

here to nationally and internationally accepted standards and medical ethics.

Other main tasks and duties include:

- i. participating and facilitating the consultation process among all concerned parties in order to carry out an appropriate problem, needs and resources assessment;
- ii. participating in, and facilitating the creation of, health and nutrition committees with the Ministry of Health, other UN agencies and non-governmental organizations (NGOs) where coordination will take place to jointly identify priority activities, and to plan for their implementation by defining needed human, material and financial resources;
- iii. facilitating cooperation among all partners to ensure an appropriate implementation and monitoring of the programme as agreed upon at the coordination committee meetings;
- iv. setting up and participating in the implementation of an effective Health Information System;
- v. ensuring that joint protocols for medical treatment, staffing and training are established and that implementing partners adhere to them;
- vi. ensuring the identification of a qualified and experienced person to coordinate reproductive health activities at the start of the relief programme;
- vii. facilitating inter-sectoral coordination;
- viii. consolidating the reporting about the refugees’ health and nutritional status; and
- ix. assisting in setting up a medical evacuation plan for UNHCR staff.

132. Experience shows that it is in the first days and weeks of an emergency that excess mortality is recorded.

It is vital that a UNHCR Health Coordinator is fielded immediately, at the very start of the emergency.

133. The quickest and most practical way to deploy a Health Coordinator is usually to send UNHCR staff or consultants. Headquarters should be consulted immediately on this. At a later stage, posts can be created or staff seconded from other UN agencies (UNICEF or WHO), or from the Ministry of Health.

Other specialized staff

134. The need for specialized staff should be carefully assessed by the UNHCR Health Coordinator or by the Health and Community Development Section at Headquarters. Such specialists include epidemiologists, specialists in public, reproductive and mental health, nutrition, tropical medicine, paediatrics, midwifery, pharmacy etc.

Experienced personnel with the right personality are more important than highly trained specialists, whose skills are often inappropriate.

135. Familiarity with the local culture, patterns of disease and the public health services and previous experience in emergencies are equally important as an advanced knowledge of medicine and medical techniques.

Role of the UN and specialized agencies

136. **WHO.** The World Health Organization works directly with the Ministry of Health in almost every country in the world. The response to the health needs of the refugees and surrounding local populations should be closely coordinated with WHO. Details of this collaboration are described in the WHO and UNHCR Memorandum of Understanding.

137. **UNICEF.** Collaboration with UNICEF in emergencies will focus on supply of measles vaccines and delivery/midwifery kits, as well as on health educa-

tion (see Memorandum of Understanding between UNICEF and UNHCR for more details, Appendix 3)

138. **UNFPA.** Collaboration with UNFPA focuses on reproductive health matters and demography and there is a Memorandum of Understanding between UNFPA and UNHCR which details this collaboration.

139. **UNAIDS.** UNAIDS is an inter-agency mechanism created in 1995 to support national HIV/AIDS programmes. Refugee health services must be integrated in these national programmes.

140. Through a standby arrangement with UNHCR, the Centre for Disease Control and Prevention (CDC Atlanta, USA) can supply, at short notice, experts for rapid health and nutritional assessment, improvement of epidemic preparedness and response in emergencies and set up Health Information Systems. Deployments are usually limited from four to eight weeks and can be arranged upon request through the Health and Community Development Section at Headquarters.

Role of NGOs

141. Operational and implementing partners are essential collaborators for UNHCR. All collaborators in the emergency health programme must be brought together to form health sub-committees at the central and field level as appropriate. Initially, these committees may have to meet daily or at least weekly, usually under the chairpersonship of a representative of the Ministry of Health, supported by the UNHCR Health Coordinator. Ideally, members of the committee should have been identified at the contingency planning stage.

142. Activities of the health sub-committee include: allocation of tasks, exchange and pooling of information on health activities and other sectors (e.g. food, water, sanitation etc.), setting up jointly agreed

protocols for medical procedures, staffing levels and training, and problem-solving in general.

143. During emergencies, urgent outside assistance in the health sector is almost invariably necessary. This is because the immediate and specialized attention needed represents a burden that existing local structures are not designed to bear. District health services will almost never have the needed reserve capacity in terms of staff at all levels, infrastructure, medical supplies and technical expertise. This capacity can be developed over time, with support from the central government and other UN agencies.

144. NGOs (international, regional or national) must be chosen with care and this is usually done by the government of the country of asylum. However, it is also the responsibility of UNHCR to advise the government on which organizations have proven competence in emergencies. Some agencies have experience in long-term situations but less in emergencies; others may be too narrow in focus, preferring to do purely curative work to the exclusion of public health, prevention, sanitation etc.

145. Small NGOs, especially those created in response to a specific situation, should first demonstrate appropriate competence before being engaged in the emergency phase.

The number of agencies involved should be kept to a minimum.

146. During the early stages of an emergency it is essential that the number of NGOs involved should be kept to the minimum necessary, and that those chosen should be professional, capable of deploying experienced personnel and with proven past experience in collaborating with both governments and UNHCR in the effective management of an emergency.

Organization of response

147. A possible hierarchy of health services is outlined in Annex 2. It is based on a large-scale emergency involving a great number of health staff, both national and international. A smaller emergency will require fewer levels of organization. Note that the numbers and qualification of staff suggested is no more than an indication. Actual needs will depend on the health problems, the degree of isolation of the area and so on.

All organizations providing health care to the refugees should be involved in the preparation and be required to observe standard guidelines.

148. Once the pattern of disease and overall needs have been determined, situation-specific guidelines on standard procedures for health workers should be prepared, based on national or internationally recognized standards. These should cover all aspects of the services, including subjects such as:

- i. basic principles (how the services are to be organized, including any selective feeding programmes);
- ii. standardized treatment protocols;
- iii. drug lists and supply; and
- iv. vaccination and reporting.

The guidelines should be prepared by the UNHCR Health Coordinator in consultation with all concerned, issued under the aegis of the Ministry of Health if possible, and reviewed periodically, for example by a health coordination sub-committee. At least part of the guidelines should be translated into the language of the community health workers.

Weekly Alert Thresholds for each Health Facility:

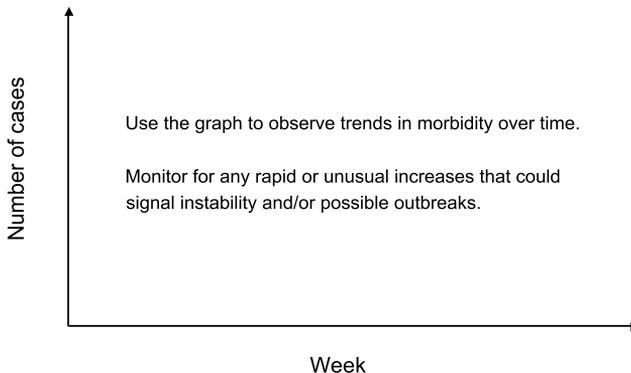

Malaria	1.5 times the baseline*
Watery Diarrhoea	5 cases in the > 5 years age group
Suspected Cholera	1 case
Bloody Diarrhoea	5 cases
Acute Flaccid Paralysis / Polio	1 case
Measles	1 case
Meningitis	5 cases or 1.5 times the baseline*

If weekly thresholds are exceeded:

1. Report to Health Coordinator
2. Complete Outbreak Alert Form

* Baseline = average weekly number of cases of the disease calculated over the past 3 weeks.

Also present weekly data in a graph (see below). This should include the most commonly reported diseases and those with outbreak potential.

Annex 4: Indicative health staffing levels (adapted from *The Sphere Project, 2004*)

Community level	Community health worker Traditional birth attendant (not for midwifery/obstetrical tasks) Supervisor Senior supervisor	One per 500 -1,000 population One per 2,000 population One per 10 home visitors One
Primary health facility (for approximately 10,000 population)	Total staff Qualified health worker Non-qualified staff	Two to five At least two, maximum 50 consultations per worker per day At least one for oral re-hydration therapy (ORT), dressings, registration, administration etc
Central health facility (for approximately 50,000 population, 24 hour service, 25-30 in-patient beds)	Qualified health workers Midwife Doctor Laboratory technician Pharmacist Non-qualified health worker Non-qualified staff	At least five, maximum 50 consultations per worker per day (out-patient care), 20- 30 beds per worker per shift (in-patient care) At least one At least one At least one At least one At least one for ORT; at least one for pharmacy; at least one for dressings, injections, sterilization etc Registration, security, etc
Referral hospital	Variable Doctor with surgical skills Nurse	At least one At least one: 20-30 beds per shift

2A. RAPID HEALTH ASSESSMENT

Date of visit: _____ _____ _____ (dd mm yyyy)	Compiled by:	Organization:
Name of location:	Urban / Rural (circle one)	Province/Governorate:
District/Area and subdistrict:	Name of town or city:	Quarter/Neighbourhood:
Reference code:	Other location information:	

1. Access

Routes to location: _____ Distance from nearest airfield? _____ km

Distance from hard surface road? _____ km Routes passable with lorry: Yes / No

Are there security problems? Yes / No – If yes, specify, providing the source: _____

Other information about access: _____

Telephones working? Yes / No – If yes, can call: locally / capital / international

2. Population

Source of information: Name: _____ Title: _____

Total population (approximate or estimate): _____ Number of displaced people: _____

Estimated sex ratio of current adult population: _____ % women

Estimated number of children < 5 years: _____ OR estimated % of total population < 5 years _____

Estimated number of pregnant women: _____

Are there other especially vulnerable population groups in the area (for example, in institutions): _____

3. Main health concerns

What are the main health concerns currently?

As reported by the population: _____

As reported by health staff: _____

4. Death rates in recent time period (days, weeks or months)

Source of information: Name: _____ Title: _____

Overall mortality rate (all ages): _____ deaths per _____ persons per _____ (recent time period)

Mortality rate in children < 5: _____ deaths per _____ children < 5 years per _____ (recent time period)

5. Health facilities

Source of information: Name: _____ Title: _____

No. of hospitals in this area: _____ No. of primary health centers (with doctor) _____

No. of primary health centres (without doctor): _____ No. of private clinics: _____

No. of other health facilities in this area: _____

(fill out tables below with description of individual health facilities)

If no hospitals in the area, where are patients referred for specialized medical/surgical care?

Is there an ambulance service: Yes / No

If yes, how many working ambulances? _____

Have the health facilities been looted? Yes / No

If yes, what medical equipment has been stolen/destroyed? _____
_____**6. Maternal and child health and nutrition**

Source of information: Name: _____ Title: _____

Is there access to an emergency obstetric care centre in the area assessed? Yes / No

If yes, which? _____

If no, where is the closest one? _____

What % of children 1–4 years of age have been vaccinated for measles: _____ %

Is there a community child care unit in this location: Yes (No. _____) / No

If yes, how many children are enrolled in all units? _____

Is there a therapeutic feeding centre? Yes (No. _____) / No

If yes, how many children enrolled? _____

Has there been a recent assessment of malnutrition in this location? Yes / No

If yes, prevalence of acute malnutrition: _____ %

How measured? Weight-for-age / Weight-for-height / MUAC / Other _____

7. Outbreaks of disease

Have there been any infectious disease outbreaks (unusual numbers of cases) in recent days/weeks?

If yes, describe symptoms, place, number of people affected: _____

8. Mine/UXO injuries

Have there been any injuries in recent months from mines or unexploded ordnance: Yes / No

If yes, describe and identify location: (Do not visit the location!) _____

9. Other health problems/issues

12. Review of outpatient register

Health facility: _____ Type of facility: _____

Time period (collect data of a recent period, preferably of the week preceding the visit)

Beginning date: _____ Ending date: _____

Diagnosis of outpatients	< 5 years	5+ years	Total
Acute lower respiratory infection			
Acute watery diarrhoea (including cholera)			
Bloody diarrhoea (dysentery)			
Measles			
Meningitis			
Malaria			
Acute jaundice syndrome			
Acute haemorrhagic fever syndrome			
War injury			
Injury (not war-related)			
Malnutrition			
TB new cases (with/without lab. confirmation)			
Diabetes			
Cardiovascular disease			
Other/unknown			
Total consultations during time period			

13. Review of death register

Health facility or data source: _____

Time period (collect data of a recent period, preferably of the two weeks, or more, preceding the visit)

Beginning date: _____ Ending date: _____

Cause of death	< 5 years	5+ years	Total
Acute lower respiratory infection			
Acute watery diarrhoea (including cholera)			
Bloody diarrhoea (dysentery)			
Measles			
Meningitis			
Malaria			

Cause of death	< 5 years	5+ years	Total
Acute jaundice syndrome			
Acute haemorrhagic fever syndrome			
War injury			
Injury (not war-related)			
Cardiovascular			
Respiratory			
Cancer			
Maternal death			
Other/unknown			
Total deaths			

14. Recommendations for immediate public health action

What must be put in place *immediately* to reduce avoidable mortality and morbidity?

Which activities must be implemented for this to happen?

What are the risks to be monitored?

How can we monitor them?

Which inputs are needed to implement all this?

Prevention of and response to Sexual and Gender-Based Violence in emergencies (SGBV)¹

Introduction

1. Everyone who is displaced is likely to find their right to personal liberty and security violated, perhaps in numerous ways. Displaced persons are also unable to find safety and security because community structures and groupings break down during flight and displacement.

Definition:

The term SGBV refers to violence that is directed against a person on the basis of gender or sex. It includes acts that inflict physical, mental or sexual harm or suffering, threats of such acts, coercion, and other deprivations of liberty.

While women, men, boys and girls can be victims of gender-based violence, women and girls are the main victims.² Nonetheless, in the context of an emergency it is also important to pay close attention to the situation of men and boys as rape and sexual abuse is also used against men and boys in conflict as a means to humiliate and as a form of torture. For the same reasons, the affected men and boys might be less likely to seek assistance. The term SGBV may sometimes be used interchangeably with violence against women or gender based violence. (*More detailed guidance can be found in UNHCR's Guidelines on prevention and response to SGBV and in those issued by the Inter-Agency Standing Committee.*³)

¹ This section is adapted from *Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response*, UNHCR, May 2003; *UNHCR Handbook for the Protection of Women and Girls, provisional release, 2006*, and *Inter-Agency Standing Committee, Guidelines for Gender-based Violence in Interventions in Humanitarian Settings*, September 2005.

² This definition is based on the 1993 Declaration on the Elimination of Violence against Women, Article 2. For further details, see Chapter 5, section 5.3.3.

Causes and factors contributing to SGBV

2. Gender inequality and discrimination are the root causes of SGBV, but displacement increases the risks due to flight, the exposure to armed groups, tensions with host communities, and the mingling with other unknown displaced persons. While war, conflict and internal strife are the primary causes of flight and displacement; rape and other forms of SGBV may also provoke flight, especially when such violence is used as a weapon of war, including in the context of ethnic cleansing. These forms of SGBV may also occur during flight at the hands of bandits, traffickers, border guards, and/or other individuals in authority. Like men and boys fleeing conflict and persecution, women and girls are increasingly obliged to pay people-smugglers and undertake perilous journeys if they are to reach a country where they can claim asylum. The problems of violence and SGBV may continue during displacement, where prior exposure often leads to continuing problems, including further violence. This is particularly true if women and girls have to travel long distances in search of food, fuel and work and if camps or displacement locations are raided by militia.

3. The dangers and uncertainties of emergencies and displacement place great psychosocial strain on individuals, families and communities which can, in turn, provoke domestic violence in camp, rural and urban settings. High levels of violence that result from the flight from conflict, the disruption of social structures, men's loss of their traditional roles, rapid changes in cultural traditions, poverty, frustration, alcohol and drug abuse, and lack of

³ See UNHCR, *Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response*, May 2003; and *Inter-Agency Standing Committee, Guidelines for Gender-based Violence in Interventions in Humanitarian Settings*, September 2005.

respect for human rights are all factors that contribute to the violence that is inflicted upon women and children. When communities flee, they bring with them their customs and traditions. Among these are harmful traditional practices, such as female genital mutilation (FGM). While often viewed as cultural traditions that should be respected, these harmful practices are human rights violations.

4. Women and girls who are single heads-of-households and/or without family support are among those particularly at risk of SGBV. Girls at heightened risk include unaccompanied girls, girls in foster families, girls in detention, girl soldiers, female adolescents, mentally and physically disabled girls, working girls, girl mothers, children born to rape victims/survivors.⁴

5. Perpetrators are sometimes the very people upon whom the individual concerned depends upon to assist and protect them, including humanitarian workers and peacekeepers. The sexual exploitation scandals in refugee camps in West Africa and Nepal of the early 2000s, involving humanitarian workers, raised awareness of this problem and resulted in the issuance by the Secretary-General of a Bulletin on special measures for protection from sexual exploitation and sexual abuse.⁵ The Bulletin applies to all UN staff including UN forces conducting operations under UN command and control, as well as NGO in contract with UN..

4 UNHCR, *Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response*, May 2003, p. 71.

5 Secretary-General, "Bulletin on special measures for protection from sexual exploitation and sexual abuse," ST/SGB/2003/13.9/October 2003, available at <http://daccessdds.un.org/doc/UNDOC/GEN/N03/550/40/PDF/N0355040.pdf>.

6 One such example is the medical condition of fistula, which occurs when the wall between the vagina and the bladder or bowel is ruptured during obstructed labour. Severe pain and chronic incontinence ensue. Fistula is found where health

Consequences

6. The consequences of SGBV include unwanted pregnancy, contracting sexually transmitted infections, HIV/AIDS, or acute and chronic physical injury,⁶ reproductive health problems, emotional and psychological trauma, stigmatization, rejection, isolation, and increased gender inequality.⁷ Women and girls who have been raped may be treated as criminals, as has been the case in Darfur, Sudan, where some have been imprisoned and fined by police for illegal pregnancy.⁸ Traditional dispute-resolution systems must be identified and monitored as they often do not generally provide adequate redress to women and girls.

Prevention of and Response to SGBV

7. To prevent and respond to SGBV from the earliest stages of an emergency, a minimum set of activities must be undertaken speedily and in a coordinated manner, with all partners (women's groups and organizations, NGOs, Government, UN agencies and the displaced and host community). Survivors/victims of SGBV need assistance to cope with the harmful consequences. They may need health care, psychological and social support, security and legal redress. At the same time, prevention activities must be put in place in coordination with the community to address causes and contributing factors to SGBV particularly in the design of the emergency response. Effective action to

infrastructure and childbirth care are poor, and is common in girls subject to early marriage. It can also be caused by rape. Surgery can repair the injury, but several operations may be required if the case is particularly severe. When fistula results from rape, survivors are routinely rejected and ostracized by their husbands, parents, and communities.

7 UNHCR, *Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response*, May 2003, pp. 23–24.

8 Médecins sans Frontières, "The Crushing Burden of Rape: Sexual Violence in Darfur," 8 March 2005, p. 6.

prevent and respond to SGBV forms part of UNHCR's protection mandate. It must be incorporated into the early stages of emergency preparedness and later integrated into the country programme.

For more details refer to UNHCR's 2003 Sexual and Gender-based Violence against Refugees, Returnees, and Internally Displaced Persons: Guidelines for Prevention and Response and the IASC's 2005 Guidelines for Gender-based Violence Interventions in Humanitarian Settings.

Objectives

In an emergency setting, multi-functional emergency teams should work together to establish a coordinated multi-sectoral and interagency response with the community to achieve the following:

- Conduct a participatory assessment to identify potential sources of SGBV and positive community prevention actions and responses.
- Design the emergency actions to respond to and prevent SGBV incidents.
- Establish coordinated confidential referral and reporting mechanisms for victims/survivors of SGBV and provide health, psychosocial, legal and material support as well as strengthening prevention.
- Establish and maintain appropriate measures to ensure the safety and security of the displaced population in coordination with the host government and population.
- Raise awareness with staff and the displaced community on SGBV prevention and response including Code of Conduct and the Secretary General's Bulletin on Sexual Exploitation and Abuse.

The key actions to be undertaken by multi-functional teams to achieve these objectives in an emergency setting have been outlined below. Multi-functional emergency teams should comprise of UNHCR and partner staff members (protection,

programme, community services, field, security, other sector specialists – medical doctors etc) who work together to ensure interventions consider the whole picture and strategies are adequate, as well as maximizing resources. Together with the people of concern, they undertake participatory assessment and analyse and discuss solutions to protection risks and assistance problems faced by the displaced communities.

Conduct a participatory assessment to identify potential sources of SGBV and positive community prevention actions and responses.

Key actions

- Through participatory assessments with women, girls, boys and men identify the places in the displacement location and surrounding areas which pose risks and danger and where people perceive security risks relating to SGBV and organize observation/spot checks in the displacement area.
- Ensure all assessments undertaken are participatory and include the subject of security and health needs and collect data by age and sex.
- Undertake participatory assessments with small groups of women, girls, boys and men and triangulate the information to assess security and SGBV risks.
- Target groups with specific needs such as unaccompanied boys and girls, child-headed households, persons with disabilities and older persons during participatory assessments as experience has shown they can be particularly exposed to SGBV.
- As much as possible, ensure that technical experts (water and site planners, engineers, nutritionists, health specialists, etc.) join the multi-functional inter-agency team in participatory assessments.

- Pay careful attention to the following areas/situations which often present security risks:
 - border crossings security check points;
 - registration points and situations where there are exchanges with those in authority (when documentation is required, or with those responsible for distributing assistance or authorizing/signing papers or for assistance);
 - distribution points and challenges some might face in accessing assistance, especially sufficient assistance, particularly plastic sheeting, blankets, soap and food;
 - areas where displaced persons, especially women and children, collect firewood, water and graze animals, including in host community areas;
 - communal latrines and showers (even if separate for women and girls) especially during the nights;
 - communal reception and collective centres where there is a lack of privacy;
 - monitor host population areas where the displaced population accesses services such as schools, community centres to ensure that access routes are safe and secure;
 - market places and local community entertainment centres where there is scope for the exchange of money and goods for specific services that could put individuals at risk; and
 - isolated locations which can create risks especially for young children.
- Discuss and agree on best solutions/mechanisms with the community, in particular with women and girls, to address the risks identified.
- Check if women and girls are able to move around on their own, if not ensure female staff are available to visit them at home and discuss their protection concerns.

- Summarize all the key risk areas and share the information with all staff and partners including the protection working group (if established), technical, security and programme personnel.
- Follow up with staff to ensure that the community perspective on the prevention of and response to SGBV is incorporated into the planning and design of the emergency response as well as the budget requirements.

Design the emergency actions to respond to and prevent SGBV incidences

The design of an emergency operational response with government and non-governmental organizations that is sensitive to SGBV issues should include the five main areas outlined below.

a. Establishment of appropriate community management structures and support to promote a community-based approach to protect women, men, girls and boys from different backgrounds

- Promote the meaningful and equal participation of women and men in all community management committees and other decision-making community-based structures (camp, food/NFI, shelter, health, etc).
- In communities where women do not normally participate in public and community activities, provide them with support and opportunities to ensure that their proposed solutions are considered and put into practice.
- Mobilize the community to identify those individuals and groups most at risk of SGBV and agree on community support and joint monitoring mechanisms including community “watch” teams with female participation.
- Identify members of the community with skills, including women repre-

sentatives, to support SGBV prevention and response mechanisms and train them.

- Work with men and boys specifically on preventing to SGBV in all activities.

b. Protection sensitive shelter and site planning

- Through registration identify groups with specific needs and plan according to their risk analysis and taking into consideration cultural considerations which can expose them to further protection risks.
- Ensure sufficient space and privacy is provided for, especially for female headed households including the potential to be able to lock the door.
- Design communal shelters with sufficient space and adequate material for partitions between families.
- Check that the solution provided is the right one in the cultural context (e.g. in certain contexts it will not be correct to place single or widowed women together on their own) and monitor such groups regularly.
- Make arrangements for alternative sources such as solar energy for lighting in communal areas (especially latrines and showers) and for individual use (e.g. torches for families).
- Plan location and design of shelter areas to promote community spirit and reinforce community-based protection, while preserving privacy, safety and security of individuals and the family unit.
- Ensure that women and minority group community members are provided opportunities to participate in decision-making pertaining to the location of services and shelter design.
- Ensure areas children use are safe and can be monitored by the community including roads to school.

- If firewood is scarce or far away and will lead to protection risks introduce alternative fuel arrangements based on the community's assessment of the best alternatives. This is a priority prevention action in areas where women and children will be exposed to SGBV or where men are physically attacked.
- Where women and children are collecting firewood and selling it for income and this poses a danger to them, introduce alternative and equally remunerative income generating activities.
- In consultation with women and if they consider it appropriate, provide for women's centers to enable safe meeting spaces for different activities including health, psychosocial and legal services in response to SGBV.

c. Effective food and non-food items distribution

Age and sex disaggregated data should be collected to ensure effective planning and distribution based on the specificities of the population.

- All decisions in relation to food and non-food items should be taken with the direct participation of the community and in particular with women of diverse backgrounds and ages.
- All distribution must be monitored regularly, especially during the emergency phase. Follow up focus group discussions should be held with the different members of the community, especially groups with specific needs, to monitor equitable distribution and identify any risks of sexual or other types of exploitation or abuse.
- Set up community based distribution services to support child and grandparent headed households, single older persons and those with disabilities and monitor the system for any

potential abuse.

- Facilitate distribution of individual identity documentation and avoid using ration cards as a substitute for documentation.
- Decide with women who should receive the family ration card.
- Provide sanitary materials, selected and distributed on the basis of discussions with women and girls, to all those of reproductive health age (estimated 25% of total population).

d. Effective protection systems and services

- Establish a system for the early identification of persons who might be at heightened risk of SGBV
- Identify relevant national laws and policies (especially those pertaining to marriage and divorce laws, rape and domestic violence laws, inheritance laws etc) in coordination with local women's associations and analyse them to see if they conform to international human rights laws and promote the rights of the victim/survivor.
- Understand how the displaced community members handled SGBV from a legal perspective prior to displacement by conducting participatory focus group discussions with women and men, including adolescent girls and boys.
- If customary practices and informal justice systems are activated by the community work with leaders ensure they respect international human rights and if necessary provide training on human rights and conduct a comparative analysis with the community on how their system can respect individual human rights.

- Work with the community to institute arrangements for community watch committees with fifty percent female representation and participation and provide appropriate knowledge and skills training.
- Work with partners to promote enrolment of girls in schools and skills training centers for boys and girls and ensure that such institutions are protected from attack and recruitment.
- Promote equal numbers of female teachers in schools and training centers who serve as role models for girls and the community at large.
- Provide specific training/briefings on the implementation of Security Council Resolution 1325 on Women, Peace and Security and SGBV prevention and response for teachers, schools administrators and community representatives and leaders.
- Promote food security and livelihood strategies, particularly for girls with children, single women headed households, young widows, older women and men who are most at risk of abuse, exploitation, and rejection.
- Ensure that programmes for child soldiers address the particular concerns of young mothers and their children.
- Promote other measures, including family reunification, skills training for income earning and recreational activities, both as preventive measures and for girls and boys who have been demobilized.

Finally, establishing schools and education structures early in an emergency will facilitate the prevention of and monitoring of sexual and gender-based violence and it is important to work with teachers on this.

Establish coordinated confidential referral and reporting mechanisms for victims/survivors of SGBV and provide health, psychosocial, legal and material support as well as strengthening prevention.

Key actions

Identification and analysis

- As a multifunctional team with partners, agree on measures to gather information on SGBV including a close review of existing information. In refugee settings, UNHCR will normally take the lead coordination role and in internally displaced persons (IDP) settings United Nations Population Fund (UNFPA) will normally take the lead and UNHCR should actively support the process.
- If a protection working group exists, share all relevant information, and if necessary establish an inter-agency, multi-sectoral SGBV working group.
- Identify key actors/partners, both local and international with access to the fleeing population, in particular women and girls, who may have information about SGBV incidents, in particular health partners and traditional midwives among the displaced population to gather first impressions. Review findings of any health assessments undertaken to check for signs of reported incidents of SGBV.
- Analyse local legal responses to SGBV and cultural perceptions of causes of SGBV among the displaced and the host population.
- Identify key people with relevant skills among the displaced population who can assist, such as doctors, nurses, midwives, and women and men in leadership roles.
- Be on the look out for information relating to community practices that might be harmful to survivors of

SGBV or lead them to be dissuaded from seeking assistance and psychosocial support.

- Establish same sex health, psychosocial and legal counselling and services for SGBV victims/survivors and their family members in such a way so as not to draw attention to their situation.
- With the inter-agency protection and/or SGBV working group agree on mechanisms for sharing statistical data and establish a database to provide daily/weekly reporting with a breakdown of cases by age and sex, as well as type (rape, sexual abuse, sexual exploitation, domestic violence, etc).
- Based on an age, gender and diversity analysis of assessments, and in coordination with key persons (if possible at this stage selected by the community) from the displaced mechanisms, develop a plan of action for prevention and response. This should be based on the guiding principles set out in the SGBV guidelines to ensure that the rights and dignity of women and girls are respected, as well as those of men and boys.
- As soon as possible establish Standard Operating Procedures for prevention of and response to SGBV with the action plan coordination with partners.

Referral

- Agree on confidential mechanisms to refer and report on incidents of SGBV and which agencies will provide which kind of assistance (health, psychosocial, legal and security).
- Jointly with partners draw up a SGBV prevention and response information, education and communication plan and disseminate SGBV prevention messages.

- Inform the community in as many ways as possible on these mechanisms and do not rely only on leaders to transmit the information, work with young adolescent girls and boys, single women, etc.
- Ensure the safety of the victim/survivor and his/her family at all times.
- Respect the wishes, rights and dignity of the victim/survivor while also bearing in mind the safety of the wider community as well as the individual concerned.
- In the case of children, ensure expert support to enable age sensitive interviewing and appropriate counselling. In some cases it might be necessary to conduct a Best Interests Determination assessment especially in the case of unaccompanied and separated children.
- Ensure that all allegations of rape and other forms of SGBV are promptly, thoroughly and independently investigated and followed up as per inter-agency agreed response mechanisms.
- Set up a confidential case file management system.
- Provide training to interpreters.
- Prior to counselling survivors to file for legal recourse, conduct a thorough analysis of the security consequences for the individual and his/her family, as well as of the effectiveness of the national legal justice system.
- Ensure clear and timely referral systems for affected persons to receive medical and psychosocial support.
- Accompany any survivor who opts for legal redress to the authorities involved and ensure appropriate standards of treatment, including confidentiality during interviews.
- When necessary make arrangements for persons at heightened risk or who fear for their safety in the community to relocate to a safe area and provide individual follow-up support and

monitoring. If the alleged perpetrator is in the community the best option is to discuss this with security services and provide discreet and specialized security services for the survivors and whenever possible make arrangements for the perpetrator to be removed.

- Work with the local police and justice system to ensure a sensitive, appropriate and just response to SGBV cases.
- When necessary and appropriate consider emergency resettlement for SGBV survivors or those persons at heightened risk with no safe alternatives.

Health and psychosocial response

- Ensure all medical staff are trained in the Clinical Management of Rape Survivors⁹ and prevention of and response to SGBV.
- Check that medical centres have sufficient supplies of treatment for STI's, emergency contraceptives and post exposure prophylaxis according to national, international and WHO standards.
- Promote female to female health services and translators as required.
- Work with the community to identify and understand how the community normally responds to SGBV and the subsequent emotional trauma.
- Analyse whether these mechanisms respect individual rights and if appropriate strengthen community-based mechanisms for psychosocial support as well as providing for individual counselling.

⁹ *Clinical Management of Rape Survivors – Developing protocols for use with refugees and internally displaced persons (Revised Edition)* World Health Organization and United Nations High Commissioner for refugees, 2004.

- Ensure health centers monitor and provide pre-natal maternal health services for pregnant women who may be rape survivors and could require specific support, particularly if they have to be discreet about the pregnancy, due to possible negative repercussions from the family, community or local authorities.
- Early identification of pregnant women in the emergency phase can facilitate safety and security and emotional support when “unwanted” babies are born.
- Be aware of possible negative perceptions towards children born of rape and make arrangements with the community for possible “foster care” of children, if appropriate and feasible.
- Medical centers should follow agreed upon reporting mechanisms and refer survivors who consent for individual psychosocial counselling and refer to legal support centers as required.
- Ensure that former girl and boy child soldiers receive medical assistance, especially related to sexual and reproductive health and sexually transmitted infections (STIs), and psychosocial counselling and follow-up.¹⁰
- Make sure that forensic evidence is collected according to national protocols to support legal follow up if desired.
- Assess existing local security responses to identify and respond to protection gaps including gender imbalance and gender insensitive strategies in protection management and implementation.
- Build partnerships with local authorities and seek their views and understand their attitudes on the safety and security of the displaced persons in particular women and children, and identify interventions to address the safety and security gaps.
- Ensure community policing and security structures take into consideration the specific risks faced by women and men of different age groups and backgrounds and that high risk areas are monitored.
- Arrange for regular patrols by police, security guards or community watch teams of all areas identified by the community and women and children in particular, as being unsafe.
- Identify with all actors, including members of the host community through focus group discussions, the causes of tension, in particular issues in relation to sharing of natural resources such as forests, grazing lands, irrigation and water sources, waste lands etc and opportunities for farm labour and other paid work activities for displaced women and adolescents. Work with all actors to seek solutions.
- Agree on joint mechanisms with host Government and population to ensure safety and security in partnership with civil society and displaced communities.
- Provide support and capacity building to local/host authorities as required, participate in and take an active interest in their and the host community’s welfare and promote joint benefits as far as possible.

Establish and maintain appropriate measures to ensure the safety and security of the displaced population in coordination with the host government and population

Key actions

- Review location of displaced persons and relations with host population.

¹⁰ Save the Children, *Forgotten Casualties of War: Girls in Armed Conflict*, 2005.

- Ensure there are adequate numbers of properly trained police and security personnel and promote gender parity among all security staff.
- If a camp situation, armed security personnel should be situated outside the camp.

Raise awareness with staff and the community on SGBV prevention and response, including Code of Conduct and the Secretary General's (SG's) Bulletin on Sexual Exploitation and Abuse as well as coordination mechanisms.

Community

- Identify key, well respected women and men from the community who will be able to gain broad support for the work on SGBV prevention and response and promote the community-based SGBV reporting mechanism.
- Agree with the community the best method to disseminate information on the prevention of and response to SGBV and the key messages to be transmitted.
- Consult with women and girls in particular to verify that the information is culturally appropriate, clear and conveys the intended message.
- Work with the community leaders and members on their role and responsibility to protect and care for survivors and not blame or reject them.
- Emphasize that SGBV reporting, referral and response services, including complaints related to sexual exploitation and **abuse are** confidential and explain how confidentiality will be respected.
- Explain potential consequences of SGBV (unwanted pregnancy, HIV/ infections, etc.) and the treatment and services that will be made available.

- Clarify the psychosocial consequences of SGBV (fear, anxiety, panic attacks, withdrawal, depression, feeling hopeless, isolation, etc.).¹¹
- With the community leaders explain the mechanisms jointly proposed for preventing, reporting and responding to SGBV cases, as well as sexual exploitation and abuse cases and other complaints involving humanitarian workers or peacekeeping and security personnel.
- Obtain feedback from different members of the community on the proposed reporting and complaints procedures. Once they are functioning monitor them carefully with the community to check their effectiveness.
- Provide information on UNHCR's Code of Conduct and the Secretary General's Bulletin on Sexual Exploitation and Abuse (SEA) and good practices related to good conduct of humanitarian personnel.
- Use different methods (leaflets, posters, radio talk programmes, classes, and exhibitions, street theatre) to reach out to people through mass campaigns and focus group discussions in market places, distribution and community centres, schools and health centers.

Security personnel

- Coordinate with host/local authorities to assess the level of knowledge and skills available on prevention and response to SGBV, as well as on Code of Conduct and SG's Bulletin on sexual exploitation and abuse.
- Agree on training needs and deliver mini-trainings/briefings as soon as possible and as the situation allows

¹¹ See *Inter-Agency Guidance on Mental Health and Psychosocial Support in Emergency Settings, to be released in 2006 (IASC)*.

in the emergency phase. As far as possible use national legislation to support the messages, as well as regional and international legal instruments, particularly those relating to the rights of women and children.

- Include in the training/briefings information on UNHCR's Code of Conduct and the Secretary's Bulletin on Sexual Exploitation and Abuse.
- Promote gender balance in all security forces (military, police and local).

UNHCR and partner staff

- Assess knowledge and skills on prevention and response to SGBV among UNHCR and partner staff and arrange for mini-training/briefing sessions using Inter-Agency Standing Committee, Guidelines for Gender-based Violence Interventions in Humanitarian Settings, UNHCR's Code of Conduct and the Secretary General's Bulletin on prevention and response to sexual exploitation and abuse (SEA).

- Ensure that all partner agencies whether Governmental or NGOs sign agreements with UNHCR to include an Annex on complying with Codes of Conduct.
- All UNHCR and partner staff should sign the Code of Conduct.
- Establish systems for SEA focal points as required by the SG's Bulletin.
- Monitor and report on SEA cases to the UNHCR Inspectors General's Office, and report on SGBV prevention and response activities in situation reports.
- Promote 50% female staffing in all functional areas including senior management, both in relation to UNHCR and partners.
- Finally, all staff, UNHCR, partners and security personnel, should wear clear identification tags and names and functions should be provided in writing to the community so that follow-up can be provided in the case of complaints.

Situation

Conflict, displacement, food insecurity and poverty have the potential to make affected populations more vulnerable to HIV transmission. In addition, HIV/AIDS may reduce the coping mechanisms and resilience of such populations. While populations affected by conflict often have lower HIV prevalence than surrounding host populations, they must be included in any successful effort to combat the epidemic. It is incumbent upon UNHCR to incorporate HIV/AIDS interventions into the overall emergency response from the onset. If not addressed, the impacts of HIV/AIDS will expand beyond the current crisis, influencing the outcome of the response and shaping future prospects for rehabilitation and recovery.

Objectives

- Refugees and asylum-seekers live in dignity, free from discrimination, and their human rights are respected.
- Reduced HIV transmission through access to prevention, care and treatment programmes.

Principles of response

- Oppose mandatory testing of asylum-seekers and refugees since this does not prevent the spread of the virus and is at variance with relevant human rights standards.
- To direct HIV and related programmes, ensure that key information is available using the HIV Information System (HIVIS) in order to determine how to implement HIV programmes and provide a baseline to monitor and evaluate programme response.
- Ensure that multi-sectoral coordination systems are established in all sectors of the operation. The inclusion of affected populations, as well

as surrounding host populations, in coordination activities together with at risk groups (e.g. women, minority groups, adolescents) is important.

- When implementing minimal essential HIV/AIDS interventions, the programme should be established according to the Inter-Agency Standing Committee (IASC) guidelines for HIV Interventions in Emergency Settings that highlight the following sectors: protection, health, community services, camp management and shelter, water and sanitation, education, and food security and nutrition services.
- Ensure access to prevention and response services for sexual and gender-based violence (SGBV).
- For persons that have started anti-retroviral treatment (ART), continued access to ART must be made available.
- Ensure that people living with HIV and AIDS (PLWHAs) have continued access to support, care and treatment services.
- Under no circumstances must refugees be persecuted on the basis of their HIV infection (e.g. prevent restrictions to freedom of movement imposed on the grounds of HIV status).
- Humanitarian staff must be protected from occupational and non-occupational exposure to HIV.
- During all operations, the code of conduct must be emphasised and adhered to by members of staff.
- Ensure staff have access to HIV prevention measures, including information and condoms and health insurance benefits.

Actions

- Establish multi-sectoral inter-agency coordination systems and meetings to ensure that HIV/AIDS is addressed in all aspects and phases of the response.
- Assess baseline HIVIS data and based on this information establish priority needs and determine required human, material and financial needs and necessary resources.
- Assess whether the HIV status of affected populations is being used in a discriminatory manner and react accordingly. Oppose mandatory HIV testing and any discriminatory measures based on HIV status.
- Protect women, children and other at risk groups and ensure that SGBV programmes establish programmes for appropriate social and medical response to rape and violence, including HIV prevention measures such as post-exposure prophylaxis (PEP).
- Include HIV/AIDS interventions in all sectoral activities such as protection, health, community services, camp management and shelter, water and sanitation, education, food security and nutrition services.
- Follow the IASC guidelines on HIV Interventions in Emergency Settings as well as national and World Health Organization (WHO) protocols and guidelines.
- Establish proper monitoring and surveillance systems using HIVIS.
- Provide staff members with access to HIV information and prevention interventions.

Introduction

1. HIV and AIDS are a policy priority for UNHCR with the ultimate goal of integrating such programmes across all sectors, including protection, community services, health, food and nutrition and

education. It is important that HIV and AIDS interventions start at the onset of an emergency and continue throughout the programme cycle.

2. During a humanitarian crisis, the effects of poverty, powerlessness and social instability are intensified. Unfortunately, these are the very conditions that favour the spread of HIV. Such conditions include:

- i. loss of income, livelihood, homes, health care and education;
- ii. increased powerlessness that often leads to sexual exploitation and violence;
- iii. severe impoverishment that often leaves women and girls with few alternatives but to exchange sex for survival;
- iv. mass displacement that leads to the break-up of families and relocation into crowded camps;
- v. breakdown of school, health and communication systems; and
- vi. limited access to health and prevention services.

3. Displacement generally brings populations, often with different HIV prevalence, into varying degrees of contact. While populations affected by conflict do not necessarily have high HIV prevalence and in fact, often have lower HIV prevalence than surrounding host populations, they must be included and integrated into host country HIV policies and programmes in any successful effort to combat the epidemic.

Initial response

4. There is an urgent need to include HIV and AIDS into the overall emergency response. If HIV/AIDS is not addressed at the onset of the emergency, its impact will expand beyond the current crisis, influencing the outcome of the response and shaping future prospects for rehabilitation and recovery.

5. Prioritising the response should be based on the implementation of the minimal essential HIV/AIDS interventions in line with the Inter-Agency Standing Committee (IASC) guidelines for HIV Interventions in Emergency Settings (see matrix in table 1, page 403) and adapted to each situation according to its context. The matrix outlines the areas for emergency preparedness, the minimum response and the comprehensive response. The IASC booklet provides detailed guidance in the form of fact sheets on activities required in the minimum response. It is essential that HIV is taken into account in all stages of operation planning and vulnerability assessments, participatory assessments and programme planning should also include HIV and AIDS.

Protection

6. There is a strong and inextricable linkage between protection, human rights and HIV/AIDS.

7. As a result, UNHCR has established the following 10 key points on HIV/AIDS and the protection of refugees, IDPs and other persons of concern.

1. **Non-discrimination:** Refugees, IDPs and other persons of concern to UNHCR who are living with HIV should live in dignity, free from discrimination and stigmatization.

2. **Access to HIV and AIDS health care:** Refugees, IDPs and other persons of concern to UNHCR benefit as any other individual from the “right of everyone to the enjoyment of the highest attainable standard of physical and mental health”.

3. **Access to Asylum Procedures and Protection from Expulsion and Refoulement:** The HIV status of an asylum-seeker does not constitute a bar to accessing asylum procedures. The right to be protected against refoulement is the cornerstone of international refugee law and HIV status is not a ground for any exception to this

principle. HIV status would also not fall within the permitted grounds for expulsion to a third country.

4. **Protection from arbitrary detention and unlawful restrictions on freedom of movement:** Detention or restrictions on the freedom of movement of persons living with HIV and AIDS is in violation with the fundamental rights to liberty and security of the person, as well as the right to freedom of movement.

5. **Respect for confidentiality and privacy:** The HIV status of a person is confidential and should not be shared without the consent of the individual concerned.

6. **Provision of voluntary counselling and testing (VCT):** UNHCR supports the use of VCT programmes as long as international standards are met and promotes equal access for persons of its concern to existing VCT programmes.

7. **Freedom from mandatory testing:** UNHCR strictly opposes mandatory HIV testing of asylum-seekers, refugees, IDPs and other persons of concern as this is at variance with relevant human rights standards.

8. **Access to durable solutions:** The attainment of a durable solution should not be jeopardized by the HIV status of a refugee or a family member. The right to return to one’s country may not be denied on the basis of HIV status. With respect to local integration, ensure access to local health and HIV- and AIDS-related services on an equitable basis with nationals in the host country. In the context of resettlement, ensure that where testing is done, human rights are respected and voluntary counselling and testing standards are met. Automatic waivers should be given for HIV-positive resettlement cases.

9. **HIV-related protection needs of women, girls and boys:** Women and girls are disproportionately affected by HIV and AIDS. Ensure their protection against sexual or physical violence and exploita-

tion. Special attention must also be paid to children affected by HIV, including those orphaned or otherwise made vulnerable by HIV.

10. **Access to HIV information and education:** Ensure widespread provision of information about HIV and AIDS to refugees, IDPs and other persons of concern, particularly with regard to HIV-related prevention and care information as well as information related to sexual and reproductive health.

Coordination

8. The main goal of the coordination effort is to meet the needs of the affected population in an effective, coherent and complimentary manner. The presence of HIV and AIDS adds a further dimension to both the crisis and the aftermath. It is therefore essential that all efforts are made to ensure that a multisectoral coordination mechanism is established.

UNHCR must ensure that the affected communities are involved in planning coordination activities, including host surrounding communities. It is important that women, educators, minority and religious groups, and adolescents are represented.

The following key actions listed below should be considered when establishing a coordinated response from the outset of an emergency response. These include establishing and strengthening coordination mechanisms, providing information and technical support, assessing the HIV situation, and establishing a monitoring and evaluation system.

9. Establish and strengthen coordination mechanisms:

- Identify an HIV/AIDS focal person to take the lead in the coordination of the response to HIV and AIDS. This can be someone from UNHCR (e.g. Programme Officer, Community

Services Officer, Protection Officer or Health Coordinator), a government official or someone from UNHCR's implementing or operational partners.

- Promote the incorporation of HIV/AIDS prevention, care and mitigation into situation assessments, participatory assessments and programme planning and response.
- Institute an ongoing review to ensure that HIV/AIDS issues are addressed in all aspects of the operation.
- Work closely with the National AIDS Control Programme and UNAIDS co-sponsors.
- Ensure that both populations of concern and surrounding host populations are involved in the development of programme activities (e.g. community leaders, women's representatives, adolescents).
- Develop a joint plan for implementation; use the HIV/AIDS and Conflict/Displaced Persons Assessment and Planning Tool. (See Framework at page 406)

10. Provide information and technical support:

- Ensure that appropriate support is provided to all stakeholders for strategic planning, assessment, monitoring and analysis in relation to HIV/AIDS.
- Ensure that national or WHO HIV and AIDS protocols are available and shared with all stakeholders.
- Ensure that HIV/AIDS is taken into account in all stages of planning of the operation; provide support to programme implementation as required.

Assessing the HIV situation

11. In order to coordinate and collaborate with other organizations and authorities, it is essential to set up a standardized database. This database will improve the understanding of the situation, guide pro-

gramme implementation, and provide a baseline for future monitoring and evaluation.

- Review and use existing baseline data from HIV/AIDS programmes.
- Perform HIV/AIDS rapid risk and vulnerability assessment.
- Review existing information and undertake local needs assessments to identify populations most at risk and priority areas for interventions.
- Important information that should be collected is:
 - i. existing sero-prevalance rates in country of origin and host-country (use nearest sentinel surveillance sites);
 - ii. HIV/AIDS services to which population had access in the country of origin, including ART, and prevention of mother-to-child transmission programmes;
 - iii. current level and quality of health services in host country;
 - iv. background information on demographic and education levels; and
 - v. type and level of risk factors that make women, children, single-headed households, minority groups, persons with disabilities and drug abusers more vulnerable to HIV transmission.
- Use the Assessment and Planning Tool Framework on page 406 to guide your work.

Establish a monitoring and evaluation system

12. During the acute phase of an emergency, the core programmes described in the IASC matrix should be implemented. Beyond these basic activities, other HIV/AIDS programmes may be continued depending upon the ongoing programmes in the country of origin and host country. Monitoring must be conducted with short-term, mid-term and long-term goals in mind.

13. Using the basic indicators provided in the Assessment and Planning Tool Framework item 10 on page a census needs to be carried out in order to harmonize with existing government indicators.

Only a minimum amount of indicators should be collected to direct programme decision-making and to ensure sufficient baseline data for future monitoring and evaluation.

14. Collect and analyse the data and then provide feedback to the government, partners and the affected communities.

Health response

15. Health coordinators need to consider the special needs of people at risk particularly children and women who are usually the most severely affected by any crisis. All PLWHAs and their families should, of course, be included in any response.

Special attention should be given to high-risk groups such as commercial sex workers, injecting drug users, and men having sex with men.

It is important that programmes are integrated with existing health and reproductive health services; vertical programming should be avoided.

Universal precautions

16. Infection prevention measures are crucial to the safety of health workers, patients and communities. Even with limited staff, equipment and funds, essential measures must be taken to avoid the transmission of infectious diseases such as HIV (as well as syphilis and the various types of hepatitis) through a comprehensive plan for prevention of disease transmission (for more details see chapter 17 on health).

17. The following key actions should be taken into consideration during a health response:

- Ensure running water is available in the health facilities.

- Ensure gloves, needles and syringes are available in sufficient quantities. In health facilities that perform surgical interventions/caesarean sections, ensure availability of goggles and masks.
- Ensure aseptic techniques are used.
- Ensure procedures are put in place for proper sterilization of medical instruments and other medical materials.
- Ensure that health staff are trained on universal precaution procedures.
- Establish guidelines for proper waste management and ensure that all health and support staff (e.g. cleaners) are trained on safe waste disposal (numerous protocols exist from WHO and other organizations).
- Ensure functioning incinerators in a safe and fenced area to safely dispose of medical waste.

Blood transfusions

18. HIV is easily transmitted through blood and thus a safe blood supply is essential and fundamental. Where blood transfusions are provided, they should be safe and follow national and WHO protocols for blood screening and transfusion.

19. Avoid unnecessary use of blood; only give blood transfusions in life-threatening circumstances and when no other alternative is possible (use as a reference the Clinical Use of Blood, WHO 2001).

20. Where blood transfusions are provided in hospitals near the refugees, ensure that basic supplies like reagents, test kits and blood bags are available in sufficient quantity.

Blood donations

21. Ensure that safe donors are selected. Selection of donors can be promoted by giving clear information to potential donors regarding when it is appropriate or inappropriate to give blood. Blood from voluntary, non-remunerated donors is saf-

er than blood from paid donors. Thus, paid donors should be avoided: at the earliest opportunity measures should be instituted to recruit voluntary donors only.

Test all blood donated for transfusion in line with the national or WHO protocols.

22. Screening for HIV, Hepatitis B, syphilis and where possible also for Hepatitis C, should be carried out using the most appropriate assays. In acute emergencies, rapid tests should be used and results of all tests must be treated as strictly confidential.

23. If voluntary counselling and testing (VCT) exists, potential donors should be encouraged to undergo VCT and results provided in a confidential and private manner with appropriate counselling and follow-up. In those cases where VCT is unavailable, results of the HIV tests must not be linked to the potential donor (e.g. one does not inform the client).¹

Sexually transmitted infections (STIs)

24. Sexually transmitted infections (STIs) are responsible for significant morbidity in adults (and newborns) and may result in complications such as infertility in women and men, cervical cancer, congenital syphilis, low birth weight of newborns, miscarriage and stillbirths. The presence of an STI can increase both the acquisition and transmission of HIV.

25. Immediate actions for the prevention and control of STIs are key strategies in reducing the spread of HIV/AIDS, and can be carried out as follows:

- Provide early and effective STI case management.

¹ Although this is an unsatisfactory situation, clients who wish to provide blood are not told of their HIV status unless they agree to undergo VCT because blood is only tested with a screening test and not a confirmatory test; thus, there will be some false positives (persons who are negative but the test shows a positive). In the future, as ART becomes available and more routine voluntary testing occurs, this situation may change.

- Provide standardized syndromic treatment; use national treatment protocols when available and appropriate; if unavailable, use WHO protocols.
- Ensure consistent availability of appropriate drugs (see chapter 17 on Health).
- Ensure that partner tracing is undertaken (i.e. notification and treatment of partners). To facilitate this tracing, each client should be provided with anonymous cards to give to their contacts; management of contacts should be confidential, voluntary and non-coercive.
- Ensure that health education and STI and HIV prevention awareness is provided to STI clients and that clients are provided with condoms and instructions on their use.
- Establish data collection systems for the monitoring of the number of STI cases presenting for treatment by syndrome, sex and age group.
- Plan comprehensive STI prevention, management and surveillance programmes at the earliest opportunity.
- Ensure that the health staff are trained and able to diagnose and treat STIs according to the syndromic approach. Explain the importance of treating the partner as well as promotion and explanation on the use of condoms.

Provision of condoms

26. Condoms offer protection against transmission of STIs and HIV as well as unwanted pregnancy if they are used correctly and consistently. One of the most urgent tasks is to make sure that people have access to **correct** information and that condoms are made **free of charge** and **readily available**.

27. Male and female condoms should be considered as essential items in emergency relief supplies. At the onset of the emergency, Reproductive Health Emergency Kits can be ordered which include

both male and female condoms, together with information leaflets.

28. UNHCR has a memorandum of understanding with the United Nations Population Fund (UNFPA) that takes into account the provision of condoms in emergency situations as well as in more established refugee situations. Close collaboration with the UNFPA country offices and the UNFPA humanitarian unit at headquarters is encouraged.

Condom distribution and quality

29. The location of condoms must be carefully considered in order to ensure wide and confidential access. Condoms should be made available to the wider community and not only in health facilities (e.g. places such as food distribution sites, information sites, bars, market places and other relevant sites should be considered). The decision should take into account cultural issues and the communities need to be involved.

30. Condoms of good quality are essential. Condom quality is determined by the quality of the consignment, but also by the handling and storage of condoms at the site. When condoms are ordered locally it is important to ensure that condoms have passed quality tests.

Calculation of condom supplies

31. **Male condoms:** there are many formulas to calculate the number of male condoms required. The easiest formula is to take the total population and use the following formula: No. of condoms / population in 1 month.

In an emergency situation, the indicator to reach is to distribute the equivalent of 0.5 condoms/person/month. In the post-emergency phase, the indicator increases to 1 condom/person/month

Female condoms: For one month, 150 female condoms /10,000 population.

Sexual and gender-based violence (SGBV)

32. The prevention and response to sexual and gender-based violence (SGBV) should be a coordinated approach (see chapter 17 on health, and chapter 11 on CBA and community service). Clinical management of the consequences of rape and the prevention of HIV transmission is essential.

Responding to SGBV

33. Ensure that health care providers are trained to provide appropriate care. Female health care providers should be trained as a priority, but a lack of female trained health workers should not prevent the service from providing care to survivors of rape.

34. Medical examination should be conducted in privacy and should safeguard the survivor's confidentiality. Perform a medical examination only with the rape survivor's consent.

35. Provide treatment in a confidential manner and in line with the national protocols or the WHO/UNHCR guidelines for clinical management of rape, revised edition, 2003:

- presumptive treatment or treatment for STIs;
- prevention of transmission of HIV through provision of a 28-day course of post exposure prophylaxis within 72 hours post rape;
- provide emergency contraception within five days post rape;
- provide wound and injury care;
- provide tetanus and hepatitis B vaccinations;
- provide follow-up care;
- provide counselling and treatment for psychological trauma; and
- refer to social, legal and protection care services.

36. Together with the Protection Officer identify who is entitled to collect forensic evidence in line with country regulations concerning the type of evidence that needs to be collected. Forensic evidence can only be released to the authorities with the survivor's consent. All types of preventive treatment can start before the evidence is collected.

People living with HIV/AIDS (PLWHAs)

37. With the introduction of the universal Access to anti-retroviral treatment (ART) campaign, more and more people will have access to ART. According to UNHCR's policy on ART for refugees, refugees should have access to ART when surrounding host populations have access to ART. Consequently, over time, an increasing number of conflict-affected and displaced populations will be on ART.

Key actions for UNHCR's anti-retroviral treatment policy for refugees are as follows:

38. In collaboration with the national government and with support from UNAIDS and their co-sponsors, ensure the continuation of ART for people affected by emergencies who were previously on ART, is permitted.

Follow the country's national treatment protocols for the provision of ART and advocate for the inclusion of persons of concern to the national programmes.

39. In line with country and/or WHO protocols, provide cotrimoxazole prophylaxis to PLWHAs. In addition, ensure that PLWHAs have access to insecticide treated nets to prevent malaria.

Additional assistance

40. Facilitating access to safe water and sanitation for families with chronically ill members, including PLWHAs, is essential. PLWHAs may have difficulty

obtaining water due to stigmatization and discrimination, limited energy to wait in long queues, or insufficient strength to transport heavy water containers. Provide hygiene education and promotion and dispel myths and misconceptions about contamination of water with HIV.

41. As a part of the emergency response, ensure that supplementary feeding programmes are established for people with chronic diseases, including PLWHAs. Although targeting food aid to PLWHAs and their families is complex, ensure that targeted food aid does not further stigmatize affected and infected persons.

Establishing comprehensive HIV/AIDS prevention and care services

42. From the onset of the emergency, it is important to plan for the establishment of comprehensive HIV/AIDS programmes. The key actions regarding HIV/AIDS programmes that should be expanded in the stabilized phase are:

- voluntary counselling and testing (VCT) services;
- prevention of mother-to-child transmission services;
- development of more comprehensive and targeted HIV prevention and awareness programmes;
- development of palliative care and home-based care programmes for PLWHAs;
- ensure prophylaxis and treatment of opportunistic infections are established;
- as mentioned above, in line with country or WHO protocols, provide cotrimoxazole prophylaxis to PLWHAs;
- establish links between STI clinics, tuberculosis programmes and VCT services;
- presumptive treatment for malaria for pregnant HIV positive women together with insecticide-treated

nets (note, this should be part of an existing programme for all pregnant women); and

- provision of ART.

Food and nutrition

43. Special attention must be given to the nutritional needs (micro and macro) including food rations in emergency operations with a high HIV prevalence. PLWHAs have special dietary and nutritional needs that need to be taken into account. Adequate intake of energy, protein and micronutrients is essential for coping with HIV and fighting opportunistic infections.

44. Specific guidance on food and nutrition as well as breastfeeding for HIV positive mothers is provided in chapter 16 on food and nutrition. More information can also be found in the UNHCR and WFP document entitled “Integration of HIV/AIDS activities with food and nutrition support in refugee settings: specific programme strategies”, (2004).

Education

45. Education provides an important protective function for children in emergencies (see chapter 11 on CBA and community services and chapter 20 on education). Schools are places not only for teaching traditional academic subjects but also for the dissemination of HIV/AIDS awareness and life skills training.

46. When education programmes are being implemented, staff must:

- ensure that HIV prevention issues are included in the school curriculum;
- coordinate with other agencies to provide teaching materials that include HIV prevention and life skills trainings; and
- ensure that girls have access to schools and to HIV prevention education through provision of a safe environment free from fears of

harassment or sexual abuse by other students and teachers.

Information on behaviour change and communication (BCC)

47. Communication in emergency situations is essential to assist people in maintaining or adopting behaviour which minimizes the risk of HIV transmission, as well as to ensure that PLWHAs have access to treatment and care services. Do not limit HIV prevention education to schools, but ensure that HIV prevention information is disseminated at distribution sites, markets and other areas where many people gather (i.e. formal and informal education). A key role for BCC lies with the communities themselves together with support from Community Service Officers.

48. It is crucial that communities have ownership of HIV prevention activities through involving them in the identification of priority topics, messaging and development of materials and strategies. Materials on HIV/AIDS prevention and transmission must be culturally and linguistically appropriate and should be part of a comprehensive BCC plan early on during the emergency in order to implement it during the more stable post-emergency phase.

49. Ensure that groups at risk are especially targeted in the HIV prevention activities and that these groups have confidential access to information on HIV/AIDS.

HIV information system (HIVIS)

50. Data is an essential requirement to direct HIV and related programmes as well as to assess their effectiveness. The HIVIS encourages integrated HIV programming by assessing and providing baseline data for conflict affected populations as well as surrounding populations. It examines interactions and HIV prevalence between the populations. It may also be used in a similar fashion for displaced populations and populations of return.

51. The HIVIS consists of 3 components:

1) surveys – behavioural surveillance surveys (BSS) and sentinel surveillance surveys;

2) monthly facility reporting (provided on page 407); and

3) inspections by checklist (provided on page 408).

52. Ensure that all data collected is used as a monitoring and evaluation tool to improve the integrated HIV and AIDS programmes. Also, provide feedback on the information collected to all partners and governments.

Humanitarian staff

53. There should be no discrimination against staff on the basis of real or perceived HIV status. Discrimination and stigmatization of people living with HIV/AIDS (PLWHAs) inhibits efforts aimed at promoting HIV prevention.

Workplace information and educational programmes are essential to combat the spread of the epidemic and foster greater tolerance and understanding.

54. Providing HIV/AIDS information in the workplace, including information about employees' health insurance plans as well as basic HIV/AIDS materials (e.g. information leaflets, condoms, location of VCT sites), are some of the key actions in protecting humanitarian staff. Staff should also have access to post exposure prophylaxis (PEP) for occupational and non-occupational exposure to HIV.

55. Also ensure that staff are aware of staff health insurance benefits regarding HIV and related diseases.

Create an open and supportive work environment; facilitate dialogue around HIV and AIDS among the staff.

56. In addition, provide training on key issues relating to HIV/AIDS including confidentiality, protection and other human rights issues.

In all operations, emphasize the code of conduct and ensure that the code of conduct is adhered to by all staff members.

Annex 2

HIV/AIDS and Conflict/Displaced Persons Assessment and Planning Tool Framework

July 6, 2005

1) Background

- a) Refugee situation
- b) HIV situation in country or origin and host country (use UNAIDS/WHO country epidemiological fact sheets (<http://www.who.int/GlobalAtlas/PDFFactory/HIV/index.asp>); use sentinel sites nearest to areas where refugees left in country of origin and live in host country; should add map (see figure below))
- c) HIV situation in refugee context

2) Funding

- a) Does host country have access to MAP, GFATM, PEPFAR or other sources of funds?
- b) Do refugees benefit from them and how can they?

3) Policy

- a) Existing National AIDS Control Policy, Guidelines and Manuals.
- b) Displaced persons specifically targeted as a vulnerable population under National AIDS Control Programme Policy.

4) Protection

- a) No mandatory HIV testing of displaced persons under any circumstances.
- b) No denial of access to asylum procedure, refoulement or denial of right to return on basis of HIV status.
- c) When required by resettlement countries, HIV testing conducted in accordance with established standards (i.e. accompanied by pre- and post test counselling and appropriate referral for follow up support and services).
- d) No laws or regulations prohibiting refugee access to public sector HIV/AIDS programmes in countries of asylum.
- e) Specific programmes in place to combat stigma and discrimination against people living with HIV/AIDS.
- f) Programmes in place to prevent and respond to sexual violence.*

5) Urban vs. Camp/Site refugees:

- a) Describe below activities separately for urban compared to camp/site refugees.

6) Coordination and Supervision

- a) Regular meetings among implementing partners in field and in capital.
- b) HIV/AIDS programmes specifically included in planning, implementation, monitoring and evaluation stages of programme cycle.
- c) Regular attendance at meetings of UN Theme Group on HIV/AIDS and associated Technical Working Groups at capital level.

- d) HIV/AIDS Coordinating Committee at camp/site level (including key members/groups of community as well as representatives from host surrounding communities)

7) Prevention

- a) Safe blood supply.
- b) Universal precautions.
- c) Condom promotion and distribution.
- d) Behavioural change and communication
 - i) Development of educational/ awareness materials in appropriate languages
 - ii) Programmes for in-school and out-of-school youth
 - iii) Peer education
 - iv) Youth centres
 - v) Sports/ drama groups
 - vi) Programmes aimed at reducing teen pregnancy and combating sexual violence.
- e) Integration with local surrounding host communities
- f) Uniformed services
- g) Voluntary counselling and testing.*
- h) Prevention of mother-to-child transmission.
- i) Prophylaxis of opportunistic infections.
- j) Post-exposure prophylaxis.

8) Care, Support and Treatment

- a) Sexually transmitted infections.*
- b) Opportunistic infections, including tuberculosis.
- c) Tuberculosis
- d) Food and Nutrition.*
- e) Home-based care.
- f) People living with HIV/AIDS.
- g) Orphans and child-headed households.
- h) Anti-retroviral therapy

9) Surveillance, Monitoring and Evaluation

- a) Behavioural surveillance surveys.
- b) AIDS clinical case and mortality reporting.
- c) Blood donors.
- d) Syphilis among antenatal clinic attendees.
- e) Sexually transmitted infections (by syndrome).
- f) Condom distribution.
- g) Opportunistic infections, including incidence of pulmonary tuberculosis.
- h) HIV sentinel surveillance among pregnant women and high risk groups such as those attending sexually transmitted infection clinics.
- i) Voluntary counselling and testing.
- j) Prevention of mother-to-child transmission.
- k) Sexual violence.
- l) Post-exposure prophylaxis.

10) Data

- a) For each camp/site, at a minimum fill in the data requested below (one column is filled in as an example):

* Activity has both prevention as well as care and treatment components

	Country
	Name of Camp/Site
Total population	7,331
Mortality Rates (MR)	
Crude MR (deaths/10,000/day) ¹	0.28
<5 yrs MR (deaths/10,000/day) ²	0.94
Universal precautions	
sufficient ³ needles / syringes	Yes
sufficient ³ gloves	Yes
blood transfusion screened for HIV	Yes
STI data	
No of condoms distributed ⁴	0.3
sufficient ³ condoms	Yes
sufficient ³ STI drugs	Yes
STI syndromic approach	Yes
incidence male urethral discharge (new cases/1000 males/month)	73.00
incidence genital ulcer disease (new cases/1000 persons/month)	1.00
% syphilis pregnant women 1st visit ANC	SNP
VCT	
Access to VCT	No
PMTCT	
Access to PMTCT	No
# persons pre test counseling	NA
% PMTCT uptake # 1 ⁵	NA
% PMTCT uptake # 2 ⁶	NA
% HIV prevalence of PMTCT clients	NA
PEP	
Do rape survivors have access to PEP	Yes
Sentinel surveillance among pregnant women	SNP
Latest HIV or RH BSS/KAPB	May 2004

¹ baseline in sub-Saharan Africa for non-emergency is 0.5 deaths/10,000/day

² baseline for sub-Saharan Africa is 1.0 deaths/10,000/day

³ sufficient supply defined as no stock out of >1 week at anytime during the past year

⁴ goal for emergency phase is 0.5 condoms/person/month and for non-emergency phase is 1.0 condoms/person/month

⁵ # women who counseled on MTCT an offered voluntary test /# women who had 1st ANC visit =%

⁶ # women who counseled on MTCT, offered voluntary test during 1st ANC visit and accepted test /# women who had 1st ANC visit, were counseled on MTCT and offered voluntary test =%

SNP=service not provided; NR = not reported; RI = reported incorrectly; NA = not applicable

Annex 3

Key Emergency Indicators

N. Ref. SIR	Indicator Description	Standard	Disaggregation	Ref. Area
34	Numbers of condoms distributed per person per month	≥ 1 per person per month	<input type="checkbox"/> Sex	Food, Nutrition and Health and HIV/AIDS
			<input type="checkbox"/> Age	HIV/AIDS
Rationale				
To measure the effectiveness of condom distribution systems				
Methods of measurement				
Numerator: Number of condoms distributed per month Denominator: Total population at the end reporting period				
Data Sources				
Health and community service partners records				
Frequency of measurement				
Monthly				
Notes				
<ul style="list-style-type: none"> - Equivalent to the conventional formula for calculating condom requirements: of the 20% of the population who are sexually active males, 20% use 12 condoms per month, plus 20% wastage and loss. This quantity is provided in the Emergency Reproductive Health Sub-kit No. 1: (condoms)/10,000/ 3 months (UNFPA, The Reproductive Health Kits for Crisis Situations, second edition, 2003). - List of potential outlets should include health facilities, community centers, youth centers, bars, market places, food distribution sites and outreach workers. 				
References				
<ul style="list-style-type: none"> - IASC guidelines HIV/AIDS interventions in emergency settings; and Refugees, HIV and AIDS: UNHCR's Strategic Plan 2005 – 2007. - UNFPA, (2003) The Reproductive Health Kits for Crisis Situations, second edition. 				

N. Ref. SIR	Indicator Description	Standard	Disaggregation	Ref. Area
17	Is antiretroviral therapy available in / for hosting community / refugees? (indicate in appropriate cell)		<input type="checkbox"/> Sex	Social integration
			<input type="checkbox"/> Age	HIV/AIDS
Rationale				
Antiretroviral therapy (ART) is a life saving and essential intervention. refugees should have equivalent access to HIV interventions as those of surrounding host populations.				
Methods of measurement				
Survey				
Data Sources				
Implementing or operational partners and Government National AIDS Control Programmes				
Frequency of measurement				
Annually				
Notes				
<ul style="list-style-type: none"> - As with all public health interventions, refugees should receive similar services as those available to surrounding host communities while ensuring that minimum essential services are provided. - Low cost refers to a co-payment as opposed to non-subsidised ART. 				
References				
<ul style="list-style-type: none"> - IASC (...) Guidelines HIV/AIDS interventions in emergency settings and Refugees. IASC. Geneva. - UNHCR, (2005): UNHCR's Strategic Plan on HIV and AIDS for 2005 – 2007. - UNHCR, (2005) Draft Antiretroviral Therapy (ART) Concept Paper for Refugees. - United Nations High Commissioner for Refugees (UNHCR). Draft 24 August 2005. 				

N. Ref. SIR	Indicator Description	Standard	Disaggregation	Ref. Area
35	Have stocks of condoms ran out for more than a week?	NO	<input type="checkbox"/> Sex	Food, Nutrition and Health and HIV/AIDS
			<input type="checkbox"/> Age	HIV/AIDS
Rationale				
This indicator measures distribution of condoms at designated points at any one point in time. It reflects the success of attempts to broaden the distribution of condoms so that they are more widely available to people likely to need them and at locations and times when people are likely to need them.				
Methods of measurement				
Yes or No answer				
Data Sources				
Health and community service partners records				
Frequency of measurement				
Monthly				
Notes				
<ul style="list-style-type: none"> - List of potential outlets should include health facilities, community centers, youth centers, bars, market places, food distribution sites and outreach workers. - Outlet types may be analysed by the populations they seek to serve. This provides an idea of the adequacy of efforts to meet the needs of people with potentially high-risk behaviour, such as young people or those in mobile occupations. - A limitation of the measure is that it provides a “snapshot” of availability at a single point in time. Where distribution is relatively regular, this poses no major problems. However when there are serious disruptions to condom supply at the central level, the repercussions may be felt simultaneously at a large majority of venues. If a survey is carried out at this time, it will appear as though the peripheral distribution system is inadequate whereas in fact the fault lies at the central level. In countries where quarterly retail surveys are undertaken, it may be possible to report an annual average to better reflect consistency of supply.

Situation

– Education is a basic human right that can provide an important support to life-saving and life-supporting activities in situations of emergency.

– For UNHCR, safeguarding the right to education is an essential strategy to ensure the protection of children and adolescents and to fulfill its commitments towards the Education for All framework.

– Although UNHCR does not have the lead role in providing education in the new UN humanitarian reform, it should systematically promote the immediate provision of safe learning activities for children and adolescents in-line with its protection mandate.

Objectives

– Protect children and adolescents from exploitation through the immediate provision of safe and child-friendly spaces and the dissemination of life-saving messages.

– Help children addressing their psychosocial needs by restoring a sense of normality and routine through the immediate provision of semi-structured recreational and learning activities.

– Foster durable solutions, by promoting peace, self-reliance, social and economic development

– Assess and plan, together with the community, education gaps, needs, capacities and responses in order to establish within 6 months after the emergency a formal school system for basic education (primary and lower secondary) as well as plan for learning opportunities for adolescents.

Principles of response

– *Access*: Children and adolescents should have an immediate access to child-friendly spaces, where recreational and learning activities as well as psycho-social support can be provided. The provision of such

support should be considered as a priority just as other life saving sectors such as health, shelter or food.

– *Safety and Quality*: education activities should be safe enough to provide effective protection to refugee children and adolescents, boys and girls. Prevention and response mechanisms to violence in school should be established. This will in turn have an impact on the quality of the learning environment.

– *Age and gender sensitiveness*: education activities should be age and gender sensitive and address the specific needs of children and adolescents, boys and girls. They should not be limited to children but target adolescents as well, especially as it is when children reach adolescence that they are generally the most exposed to protection risks. In that respect, non-formal education such as vocational training and life skills education should also be included in the programming.

– *Participation*: education activities should be designed, planned and monitored with the full participation of the community, including children and adolescents themselves as well as the education authorities. Action should also be systematically coordinated with other UN agencies with an education coordination.

Action

- Provide immediate, age and gender sensitive, recreational and learning activities in safe and child-friendly spaces .
- Establish education committees/coordination at the local and national levels
- Conduct a community-based assessment of education needs, resources and capacities.
- Develop an education plan that mobilizes the community's capacities to establish basic formal education and targets non -ormal education for adolescents at risk.

Introduction

1. The right to education for people of concern has been endorsed by the 1951 Convention on the Refugee Status, and the 1989 Convention of the Rights of the Child. In an emergency context, measures to promote universal primary education, safe school environment and other non-formal educational activities will help protect children and adolescents from forced labour, physical and sexual abuses, military recruitment and other forms of violence.

2. Establishing an education system is important for the well-being of the whole refugee community, as well as for the social and psychological well-being of children and young people. Setting up recreational activities, school systems and other non-formal activities, together with the community, will give a structure and sense of normality to a displaced and traumatized population. Refugees are displaced not only from their homes and families but also from their community. Educational activities can be the community's initial focal point, and can create a sense of routine if the new community is partly structured around familiar institutions such as schools.

Education in emergencies is not only a basic human right but also an essential tool of protection.

3. The displaced community which often includes teachers and skilled persons usually initiates informal schools, even in an emergency situation, as they recognize the importance of a school system. Refugee institutions should support their initiatives and continued management, thus enhancing self-esteem and self-reliance.

4. Other important functions of the education system in an emergency are:

- i. To disseminate survival and life skills messages. Simple messages can be spread through educational activities, on important issues such as health, including reproductive health and HIV/AIDS; sanitation, nutrition, SGBV prevention and gender awareness; children rights, landmine safety, peace education and environmental education.
 - ii. To foster durable solutions by promoting self-reliance, social and economic development. Education provides the “human and social capital” needed for reintegration in the country of origin or local integration in the host country. Appropriate education builds the foundations for social cohesion, peace and justice.
5. Detailed information on planning education programmes and on standards and indicators for refugee schools is set out in the UNHCR's Education Field Guidelines and the Inter-agency Network for Education in Emergencies (INEE) Minimum Standards for Education in Emergencies (MSEE). These guidelines are essential reading for those establishing an education programme in an emergency context.
6. Basic quality education (primary and lower secondary) as well as non formal education for older children who cannot be reinserted in formal schooling must be provided as soon as possible as it can save and protect lives. It should be considered as a priority as much as other sectors.

The emergency education programme should provide immediate and free access to semi-structured, recreational and learning activities in safe environments. It should also plan for the establishment, within six months after the emergency - of a basic education system for all refugee children and of learning opportunities for adolescents.

Early response

7. In the beginning, the aim is to support the community in establishing a simple programme of semi-structured recreational and simple educational activities for children and young people. It is essential for these activities to be delivered in safe and child-friendly spaces where children and adolescents are not exposed to protection risks and can feel safe.

In that respect, it is recommended to create separated spaces and activities for small children and adolescents and to ensure codes of conduct are established for all education staff. For further guidance on safety in learning environments, refer to UNHCR Safe Education Guidelines.

8- Establishing simple educational activities is possible even with limited educational supplies – simply gathering children and adolescents together for a set period each day and keeping them occupied is a valuable first step. This can be achieved through mobilization of teachers, adolescents or youth leaders identified from the refugee population. The activities should support the life-saving measures underway in other sectors by including simple messages on health, sanitation, risks of abuse and other relevant topics appropriate for the children’s level. Activities and messages should be designed and planned together with children, adolescents and parents. Annex 3 (p 64) provides examples of recreational and activity materials that could be used to support such a programme.

9. Where possible, it is preferable to procure educational and recreational supplies in the country or immediate region concerned. Supplies obtained through local NGOs may be cheaper, logistics easier and they will benefit the local economy. If this is not feasible, both UNICEF and UNESCO have educational emergency kits that can be accessed. UNHCR’s partnership with these two other organizations should be fully operational in an emergen-

cy context, as defined by the Memorandum of Understanding.

10. While structured recreational activities are being set up, a comprehensive education programme should be planned according to the results of an initial assessment of needs, gaps, capacities and resources. The assessment should be conducted by education committees representing education authorities, local and international NGOs, refugee children, parents and teachers associations, and other UN agencies identified to support the development of basic education programmes.

11. The initial assessment of education gaps is based on a participatory approach and promotes age, gender and diversity mainstreaming. The educational needs of children should be broken down by age, gender and diverse background and the groups at risks, as well as groups with specific needs, should be immediately identified.

Semi-structured recreational and learning activities should always be delivered in safe environments where children are not at risks of abuse and exploitation.

12. Educational responses should be based on the results of the above assessment and developed together with the refugees, including adolescents and children. Responses should build on existing initiatives and capacities, mobilize all groups within the community, and be prioritized according to protection objectives and risks identified. Resources available and capacities will include skilled persons, with or without teaching experience, family members including adolescents and elders. Textbooks from the country of origin should be used as the basis for preparing curricula and teaching materials, unless the curriculum of the country of asylum is used. Local capacities can also include local NGOs, community structures and government agencies involved in the education sector. The community,

through the creation of education committees, should be fully mobilized and involved in the identification of gaps and responses.

Basic education (primary and lower secondary)

13. Within 6 months after the first major displacement, the initial non-formal educational and recreational activities should be developed into a single, unified primary school system, based preferably on the curriculum of the country of origin. Where the school system in the country of asylum is similar to that of the country or area of origin and refugee numbers are limited, resources may be provided to local schools to enable them to accommodate refugee students, provided this is cost-effective. Decisions should be taken with the participation of both the refugees and the authorities representing the Ministry of Education.

The provision of education to the refugee community may be perceived by the host community as a privilege that their children do not enjoy. If the government is in agreement and there is a common language of instruction, it is usually appropriate to open the schools to the local population or reinforce existing schools. Some assistance may therefore be provided to national schools located very close to refugee sites.

School structures and locations

14. In order to open schools as early as possible, temporary shelters may be constructed in safe locations using plastic sheeting or semi-durable materials. The location of schools, latrines and recreational spaces should be defined with the participation of all refugees, including children and adolescents, with due consideration for security issues.

School locations should be within walking distance for children. Latrines for girls and boys should be separate. The community should be mobilized to help build and maintain safe school buildings, and be organized in committees representing the interests of teachers, parents and students.

If camps are very large, smaller, decentralized schools are generally preferable to large schools to avoid children being at risks on their way to school. The likelihood that additional classrooms may be needed at a later stage should likewise be borne in mind at the time of site selection and demarcation.

Curriculum and learning materials

15. The curriculum should preferably be based on that of the country or area of origin, to facilitate reintegration upon repatriation providing that both the refugees and the authorities agree on this principle. The curriculum should be enriched with life skills and values on HIV/AIDS, children and women rights and land mine sensitization, reproductive health and/or SGBV prevention modules. School hours should be defined in consultation with teachers, parents and children and adapted to family and work constraints, especially where the girls have to fetch water and firewood for their family or do home chores.

16. Educational materials described in Annex 4 can be used to establish a basic education programme. The materials in this list would meet the initial needs of 1,000 refugees, and include sufficient writing materials for two classrooms of students in the earliest stages of primary school, plus one classroom for students who have completed 2 or 3 years or more of primary schooling. If each classroom is used initially for separate morning and afternoon shifts, then a total of 240 students can be catered for. Typically there would be two or more writing materials kits (of

the type specified in Annex 4) per school, according to the number of classrooms on each site.

Recruitment of teachers and classroom assistants

17. It should be made clear to the initial volunteer teachers that selection tests will be held as soon as is practicable. The recruitment of female teachers and female classroom assistants should be encouraged to enhance protection of girls from sexual harassment by male pupils and teachers. Once selected, all teachers should sign a code of conduct that explicitly prohibits them from abusing children. The code of conduct should be defined by teachers, parents and students themselves in close collaboration with the relevant authorities, and they should be publicized in each classroom through child-friendly messages.

18- Teachers should receive adequate support and compensation as well as trainings on children and women's rights, psycho-social support and codes of conduct. Training needs and opportunities should be defined at an early stage together with teachers, community structures and government agencies.

19- Community-based prevention and response mechanism to violence in schools, including SGBV, peer to peer violence and corporal punishment, should be established together with teachers, students and parents in order to ensure learning environments are safe. For further guidance, refer to UNHCR

Secondary and Non-formal education

20. Non-formal educational activities, such as literacy and numeracy classes, life skills education or vocational training, should be structured for groups who cannot be integrated into formal education. This includes secondary students where higher secondary is not available, out of school adolescents, young adults or groups

with specific needs (disabled, ex-child soldiers, etc). The activities should be defined on a participatory basis and built on the existing capacities and resources in the education sector, both within the refugee camp and the hosting area. Vocational training offered should be relevant to the job market to ensure that the adolescents and young people can secure employment and where appropriate the necessary tools should be provided.

21- However, all efforts should be made to reinsert the adolescent girls and boys into formal schooling. Access to secondary education should be facilitated and supported with the participation of international NGOs, the refugees and the relevant authorities of both the hosting area and the country of origin.

Allocation of resources

22-. Budget allocations should prioritize activities that will reinforce the safety and the quality of learning environments as compared to school infrastructures as such. It is preferable to have schools in semi-durable materials so as to have enough resources left for the reproduction of school didactic materials, school materials, teacher's trainings, and school-based sensitization on children and women's rights, forced recruitment, or SGBV.

23- Initial budgets should provide for the printing or photocopying of codes of conduct as well as classroom materials for pupils and teachers, based on core elements of the country of origin curriculum, where applicable, as well as for the initial purchase of school and recreational supplies. Budgetary provision may also be necessary for the translation and reproduction of materials supporting health, SGBV prevention, environment, peace education, children rights and other messages.

24- Resources should also be mobilized to offer non-formal educational opportunities to adolescents, young adults or groups with specific needs. When funds are lim-

ited UNICEF should be fully involved in the provision of materials, school kits, and teacher training and a joint plan of action with key stakeholders should be defined as soon as possible and presented to donors.

Education coordination

25. Education committees are in charge of assessing education gaps and identifying responses or are empowered to do so. Education authorities should take the lead in establishing education committees with equal representation of men, women, girls and boys and coordinating the education emergency response. However, when the authorities are not operational, an inter-agency coordination committee will provide guidance and coordinate education activities while efforts are made to build the capacities of the authorities.

26. The Inter-Agency Network for Education in Emergencies (INEE), consisting of UN Agencies and NGOs, provides updated technical knowledge and ensures cooperation at a global level to improve the quality of education in emergencies.

27. Although UNHCR may not take the lead role in providing education in an emergency, it should always retain a monitoring and advocacy role. This is important to ensure that all refugee children and adolescent girls and boys have access to safe learning environments in emergencies, as education is part of UNHCR's protection mandate.

In the education sector, UNHCR has agreements in place for emergency staff deployments. These secondments can be deployed within the first emergency response team or within the first weeks of the initial response.

28. The staff deployed will be responsible for promoting and supporting the establishment of education committees and organized early-stage recreational activities on a participatory basis. He or she will li-

aise with local and national education authorities, UN agencies and partners in order to coordinate education programmes early in the response, as well as to conduct joint assessments and share information.

29. UNHCR and other agencies should actively collaborate with the Education Ministry of the country of origin and that of asylum. Initially, efforts should be made to obtain school textbooks and teachers' guides. Thereafter education committees should be convened and meetings on education participated in, in order to discuss curriculum, teachers' training, recognition of diplomas, accreditation of the grades obtained including access to local schools and vocational training centers.

Education in returnee and IDP context

30. In returnee and internally displaced persons (IDP) situations, a community-based approach should be systematically adopted. Assistance should not target individuals (ie. registered returnees or IDPs alone) but benefit the community as a whole in order to avoid conflicts and stigmatization. Education programmes should target schools or vocational training centers located in areas of return or displacement, and include targeted actions to improve the quality of the education environment. Punctual and financial support to returnees or IDPs alone should be limited to the neediest families.

Action

- **Arrange separate recreational and learning activities in safe environments** for children and adolescents in order to restore a sense of normality as soon as possible.
- Consult UNHCR Headquarters and the local UNICEF office regarding availability of educational and recreational materials and provide adequate materials to support community initiatives (see Annexes 3 and 4).

- Make sure children and adolescents are consulted when defining the activities and arrange the timing around other household and family duties to ensure maximum participation.
- **Establish education committees** to include refugee teachers, parents and children girls and boys, local education authorities, relevant UN agencies, and the implementing partner at appropriate levels (district and/or national).
- Send a request to UNHCR headquarters for the **deployment of an Education Officer** when necessary.
- The education committee must **conduct a comprehensive assessment of education gaps**, resources and capacities based on the results of the participatory evaluation. Make sure that the specific needs of children at risk, including teenage mothers, former child soldiers, disabled children and other groups at risk are taken into account and that they participate in the definition of activities.
- Based on the findings of the assessment, the education committee **develops an Education action plan** that meets the requirements of the different identified age groups and backgrounds of the boys and girls. Ensure the education plan involves mobilizing the community's capacities to establish both formal and non-formal education activities and to secure safe access to quality education for girls and boys.
- The education plan should **focus on the safety of learning environments and the quality of education**, gender parity and should also include:
 - accurate statistics on children who were and were not in schools before flight, disaggregated by age, gender and grades;
 - identification of safe school sites together with refugee children and adolescents and the UNHCR multi-functional team;
 - definition of school hours adapted to household and work constraints;
 - a defined curriculum enriched with specific modules on health, SGBV, children rights, violence prevention, landmines and/or HIV/Aids;
 - the number of didactic materials and text books needed;
 - teachers recruitment procedures, codes of conduct and supervision mechanism;
 - an identification of needs, resources and partners for the provision of teachers training on codes of conduct, children and women's rights and psycho-social support, including for female teachers who should be trained in priority;
 - the establishment of community-based mechanisms to prevent and respond to violence in school settings including SGBV reporting mechanisms
 - identifying relevant, non-formal, educational activities to address the needs of adolescents at risks and/or with specific needs.

- Identify an implementing partner who will work together with the education committee to establish a **monitoring and reporting mechanism on the safety and quality of learning environments**. Indicators should be identified to monitor the impact of the educational response on boys and girls, adolescents and groups at risk and/or with specific needs. A list of indicators is provided in the INEE Minimum Standards for Education in Emergencies p 25 (see reference below) as well as in UNHCR Standards and Indicators.

- Education programmes should be **monitored and evaluated regularly** through a participatory approach to identify potential gaps and protection risks. **Adjustments** should immediately be sought to address the root cause(s) of the identified protection risks rather than the symptoms.

Situation

Refugee emergencies are often in locations far from the main sources of supply and communications. Exceptional efforts (without which an operation may fail) may be needed to ensure the provision of supplies and services. However without these, the whole operation will fail.

Objective

The timely delivery of the materials needed for the refugee operation.

Principles of response

- There should be a single, unified “supply chain” with standardized procedures and coordinated with external agencies such as WFP. The term “supply chain” includes the sourcing, procurement, transport, import, management, storage and distribution of goods and services required to meet operational needs.
- Duplication of supply chain support within the UNHCR operation must be avoided.
- A single coordinating body of all the relevant UN agencies may be required to implement certain aspects of the supply chain such as transportation and storage (e.g. a “UN Joint Logistics Cell”);
- Request urgently needed supplies from the UNHCR Central Emergency Stockpile if they are not available locally for immediate delivery.
- Ensure there is good communication between offices involved in the supply chain and timely information exchange regarding logistical capacities and constraints.
- Transport and storage arrangements must have spare capacity: things often do not go according to plan, needs, and the demand for supplies, may increase.
- Seek technical assistance when necessary.

Action

- Make a comprehensive plan for all supply chain functions. Integrate supply chain arrangements in the overall planning from the start, coordinate with all sectors, and take into account any special requirements.
- Identify weak elements in the supply chain and inform operational managers of actions rendered critical due to lead time (the delay between the request for material and its arrival).
- Seek out knowledge on local conditions and assess implementing possibilities with local suppliers, or other agencies.

Introduction

1. The vital role of the supply chain must not be overlooked in the initial planning, and the input of a logistics specialist is required on any assessment mission. The more remote the location of the displaced, the more difficult will be the logistical problems, yet these are the situations where logistic support or the lack of it becomes the key to success or failure.

The ability to deliver the right supplies to the right place at the right time and in the right quantities is a prerequisite for an effective emergency operation.

2. The supply chain must provide for international purchase, transport, swift unloading and duty-free clearance on arrival, local purchase, transit storage, onward transportation, and final distribution, with proper stock control at every stage. Figure 1 shows the likely major components of the system in diagrammatic form.

3. Logistical support can be disrupted by unpredictable events and many factors outside UNHCR’s control including customs delays, breakdowns, looting, and the vagaries of nature. Furthermore, the numbers requiring assistance often increase during the emergency phase of an operation.

The supply chain must provide for spare capacity because available capacity may become quickly overwhelmed.

Organization of the supply chain

- A single coordinated operation is essential and duplication of supply chain services must be avoided.
- This requires a clear understanding of overall needs and the responsibilities for meeting them.
- Three key qualities of a good supply chain are: rapidity, flexibility and security.

Assessment

4. A clear understanding of the overall needs by all concerned is essential. Needs assessment and planning should be carried out together with government, WFP and NGO partners.

5. An easily understood and comprehensive list of requirements is essential as the starting point for meeting the basic material needs. Without it, great confusion can result. With such a starting point, the balance of needs, requirements and distribution can be continuously monitored, and the effect of these relief goods or services will be immediately apparent.

Planning

6. Three key qualities of a good supply chain are: rapidity, flexibility and security. These three qualities depend on good co-ordination and communications as well as good planning. When planning for and developing the supply chain, ensure:

- Rapidity:* Response time is critically important in emergencies, and advance planning is essential to optimize resources, and not waste time correcting avoidable mistakes or inefficiencies. Planning must take into account lead times.
- Flexibility:* Logistics are dictated by the circumstances of the operation and terrain, and must be able to

quickly adapt to rapid changes in circumstances. Plan for the worst case scenario, and build in the required flexibility and adaptability.

- Security:* The security of personnel and relief goods must be a priority in the logistics plan. Security risks vary from theft and looting to war.
- Coordination:* Coordinate planning and implementation with other agencies, in particular WFP who often have good local transport and logistical capacity. WFP is normally responsible for food supplies up to the agreed Extended Delivery Point – see chapter on food and nutrition.

v. Avoid duplication of logistical services by different organizations and ensure a single, coordinated operation.

- A single coordinating body of all the relevant agencies may be required to implement certain aspects of the supply chain such as transportation and storage (a “UN Joint Logistics Cell”) – guidance on setting this up is given in UN Joint Logistics Cell: Standard Operating Procedures. Ensure effective coordination by: advising team members and staff from other organizations of minimal lead times, respecting deadlines and delivering the expected supplies at the time and place agreed and keeping to agreed loading and transport schedules.*
- Comprehensive planning:* Have an overview of the whole operation when planning for and managing services, materials, staff and time.
- Spare capacity:* The logistics plan must provide spare capacity, taking into account factors which would cause delays (such as vehicle breakdowns).
- Cost-effectiveness:* Ensure proper maintenance of warehouses, efficient stock control, and well negotiated contracts (e.g. for transport, warehouses, customs clearance, and

maintenance). Ensure purchases are made from competitive sources in accordance with UNHCR regulations – although initial purchases may be made with speed as a foremost concern, plan follow-on supplies in good time to be able to purchase from competitive sources.

- x. *Good communication:* A regular exchange of information between the offices involved in the supply chain is essential. Headquarters should give the Field as much notice as possible of procurement and shipment of goods or services, estimated times of arrival (ETA), changes in delivery schedules, and of contributions in-kind. The field should advise Headquarters of any changes to importation laws, acknowledge receipt and distribution of consignments, and advise Headquarters of contributions in-kind. It is equally important for the field to make all necessary preparations to receive relief supplies and deliver to the beneficiaries at the earliest possible time.

There must be good communications facilities at dispatch and arrival points as well as mobile communications sets on surface transport.

- xi. *Clear responsibility:*

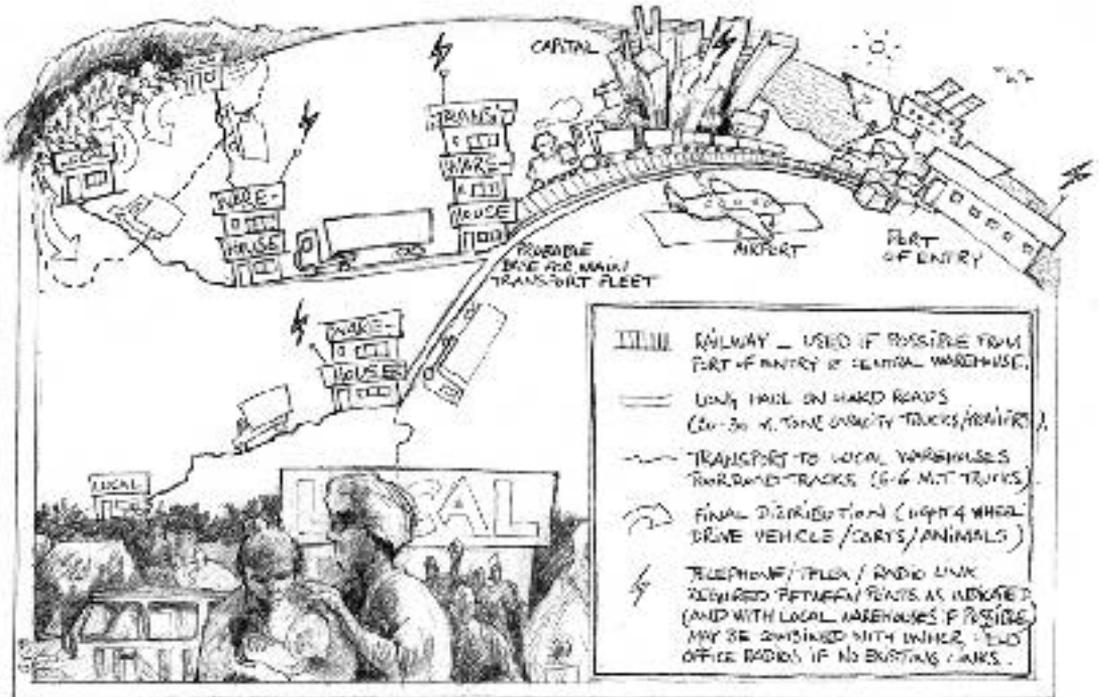

Whatever the arrangements in the field, the line of responsibility and reporting to UNHCR by the operational partners must be clear.

The major decisions about supply chain issues should be taken by the same person with the appropriate responsibility and authority.

Local and other resources

7. The supply chain should use local resources and knowledge as far as possible. Where there is a good existing warehousing and distribution system, outside assistance may not be necessary. Where outside assistance is required, sources include:

- i. Supply Management Service (SMS) at Headquarters (which handles procurement of goods and services, logistics, fleet management, and asset management;

- ii. government disaster agencies or emergency corps, and Government Service Packages from donor governments (see chapter on implementing arrangements); and
- iii. an NGO or commercial firm with appropriate experience.

Setting up the supply chain

8. The circumstances of each emergency will determine what type of supply chain support is required – whether it is directly implemented by UNHCR, through an operational partner or as a commercial contract.

9. Steps to establish the supply chain include the following:

- i. Make arrangements for the duty-free import/export of relief goods, and duty-free and tax free purchase of relief goods with the appropriate governmental authorities. To avoid delays, this must be done before the goods are due to arrive.
- ii. Investigate the possibility of using local suppliers, establish vendor roster.
- iii. Select warehouses appropriate for their purpose (for storing food or non-food items; for trans-shipment, storage or distribution). Ensure that access roads and doors allow easy loading and offloading.
- iv. Select appropriate transport for goods and/or passengers: determine the type and the number of light and heavy vehicles, vessels, aircraft and trains needed. Calculate fuel and maintenance requirements (tyres, lubricants, parts and mechanics).
- v. Use temporary assistance during peak demand for staff.
- vi. Provide the necessary staff support equipment such as office equipment and supplies, light and water, vehicles, freight handling items, power, communications, and accommodation.
- vii. Put in place a documentation and

filing system, and use standard forms to report on the status of relief goods. Advise and train personnel on procedures.

Supplies

- Assess what is readily available on the local market: if locally available items are appropriate, make at least initial purchases locally;
- The basis for UNHCR procurement is competitive tendering;
- Standard specifications have been developed for common items;
- Certain emergency relief items are stockpiled centrally by UNHCR and can be accessed quickly in an emergency.

Introduction

10. The basis for all UNHCR procurement is competitive tendering. This process is made easier and more efficient by standard specifications.

11. Headquarters' Supply Management Service gives advice and provides support on all procurement and logistics matters and is responsible for international procurement. Guidance on local purchase can also be sought from other UN organizations. Tendering procedures are described in Annex 2 to chapter 8 on implementing arrangements.

12. When drawing up tender documents and purchase orders it is essential that all specifications, quantity, required delivery, packaging and payment terms be clearly stated. Care must be taken to ensure that contract terms protect the rights and immunities of UNHCR. Requests for tenders should in any event include UNHCR's standard terms and conditions. Advance payments and cash transfers to suppliers must be authorized by Headquarters.

13. If procurement is to be undertaken by implementing partners on behalf of UNHCR, the principles of competitive bidding must be followed (detailed in-

formation is also available in **Supply Management Handbook, Chapter 8 of UNHCR Manual**). UNHCR staff should monitor local and international procurement made by implementing partners for the UNHCR-funded programmes.

14. Care should be taken to avoid purchasing different qualities of the same items.

Local and international procurement

15. If emergency relief items are available locally, compare prices where possible with the international market. Use catalogues or send local prices to the Supply Management Service in Headquarters who will advise on the most appropriate course of action. Assess what is readily available on the local market: if locally available items are appropriate, make at least initial purchases locally. At the same time however, consider the cost-effectiveness of continuing such local purchases beyond the initial phase of the emergency, compared with making those purchases internationally.

16. Local procurement can offer a number of advantages over international purchases. These could include:

- i. lower prices;
- ii. speed and flexibility of delivery;
- iii. local acceptance; and
- iv. benefits and incentives to the local economy (particularly in areas affected by a large refugee influx).

17. However, the disadvantages of local purchase could include:

- i. higher prices;
- ii. inappropriate quality;
- iii. sudden price increases (due to sudden heavy demand) on the local market, adversely affecting the local consumer population and causing resentment; and
- iv. higher maintenance costs.

18. As a rule, no more than 15% would be an acceptable premium for prices of locally procured goods over the total delivered cost of internationally procured goods.

Local procurement

19. When the capacity of the local market is limited, care must be taken to avoid price increases caused by organizations bidding against each other for the same supplies. Provided there is clear agreement on the needs, coordination of purchases and even combined orders among the organizations concerned should be possible.

International procurement

20. UNHCR has entered into a number of Frame Agreements for a range of products. The purpose of these agreements is to ensure the availability of goods of an agreed quality at competitive prices, and reduce total lead time. These items include blankets, plastic sheeting, essential drugs, kitchen sets, semi-collapsible jerry cans, and buckets. Support and office items supplied under frame agreements include light vehicles, vehicle tires and tubes, generators, ballistic armour, computer and telecommunications equipment, and some office equipment and supplies. Lightweight emergency tents were added to the Frame Agreements as well as to the Central Emergency Stockpile.

21. The UNHCR Catalogue of Most Frequently Purchased Items gives summary specifications, reference number, price (US\$), country of origin, and, where relevant, production capacity, production lead times and estimated shipping times. It also includes a list of current Frame Agreements.

22. When requesting Headquarters to make a purchase, be sure to use both the reference number for a product, and the name and date of publication of the catalogue. If specifications are not available for the product wanted, inform the Supply Management Service of the purpose of the

product and the context in which it will be used.

23. Bear in mind lead times for international purchase can be lengthy.

Emergency stockpiles

24. Certain common relief items are stockpiled centrally by UNHCR, or by suppliers on behalf of UNHCR, and can be accessed quickly in an emergency.

The UNHCR stockpile includes the operations support items listed in the Catalogue of Emergency Response Resources. These items can be ordered through Headquarters.

25. Other UNHCR operations in the region may hold stocks that could be made available – these offices should be approached directly about the most urgent requirements.

26. UNICEF, WHO, WFP, the IFRCS and NGOs also maintain emergency stockpiles with supplies which may be available to UNHCR.

Specifications and catalogues

27. There are a number of catalogues of products with detailed specifications. Using standard specifications (and Frame Agreements) is not intended to limit choice, but simplifies supply, and ensures better integration of equipment, spare parts and services. Generic specifications also make the procurement and tendering process fairer (e.g. comparing prices). Annex 1 gives detailed specifications of certain common relief items.

28. Catalogues of specifications include:

- i. **UNHCR Catalogue of Most Frequently Purchased Items.** This is published annually by UNHCR's Supply Management Service, and available on Intranet. It gives brief specifications, price, and lead times.
- ii. **IAPSO Emergency Relief Items.**

This is a two volume electronic catalogue published by the Inter-Agency Procurement Services Office (IAPSO) of the United Nations (www.iapso.org). A large number of standard specifications adopted by UN are available in this catalogue, and there are additional IAPSO catalogues on other items (see key references).

iii. UNICEF Supply Catalogue.

UNICEF also produces a large illustrated catalogue (www.unicef.org/supply/index_26071.html).

Considerations in product choice

Environment

29. UNHCR has a policy, also applicable in emergency situations, to ensure awareness and supply of environmentally friendlier products. Impact on the environment is considered an integral part of product quality. Where two or more suppliers are offering items which are substantially the same in terms of specifications, price, quality, and delivery time, the policy is to give preference to the product whose manufacture, use and disposal is less harmful to the environment. For further details see Environmentally Friendlier Procurement Guidelines, UNHCR, 1997.

Shelter

30. For shelter, local materials and methods of construction should be used where possible, combined with tarpaulins or polythene sheeting if necessary. Except for nomadic tribes, tents are not a satisfactory type of long-term shelter. They are, however, a valuable last resort in emergencies. Remember that tents may deteriorate rapidly if stored for any length of time, particularly if humidity is high. For the above reason, UNHCR has developed a lightweight emergency tent which can be stored for a longer period than the cotton-canvas tents. The specifications of the lightweight tent is available with SMS and on the intranet.

In-kind donations

31. In-kind donations should always be evaluated against actual needs and cultural appropriateness. All offers for in-kind donations should be discussed with Donor Relations Services and the Supply Management Service in Headquarters before being accepted (see Supply Management Handbook, chapter 8 of UNHCR Manual). Particular attention should be given to packaging (which must meet transport requirements) and expiry dates of products offered.

Clothing

32. Used clothing is often offered in emergencies but is generally an unsatisfactory way of meeting a need for clothing and should be discouraged. It often arrives in poor shape, dirty or badly sorted and will frequently be inappropriate for the customs of the refugees. Consider the alternative of purchasing particularly locally made clothes, and ensure that what is provided is culturally acceptable.

Transport

- ◆ Vehicle fleets should be standardized (same makes and models).
- ◆ Ensure there are sufficiently trained drivers, fuel, lubricants, spare parts, tyres, maintenance personnel and facilities.
- ◆ It may be necessary to improve access roads, bridges, airport, or other infrastructure.
- ◆ A substantial margin of spare transport capacity (10-20%) must be provided.
- ◆ With health and community services, assess particular requirements for transporting refugees in a repatriation operation, and/or distribution for vulnerable groups.

International transport

33. Arrangements must be made in advance with the relevant authorities for priority clearance and duties exemptions.

Air

34. In the emergency phase, supplies from abroad may arrive by air. Provide Supply Management Service at Headquarters with an update on the handling capacity of the airport (state of equipment, working hours, etc.) and the list of documents required for import and export of relief supplies.

Sea

35. As soon as details of the arrival of relief supplies by sea are known, arrangements should be made for clearance and priority allocation of an alongside berth and/or handling of cargo. In principle, relief supplies should be loaded only on vessels with the capacity for self-discharge. Whenever discharging alongside, they should do so directly onto trucks if possible. Arrangements for onward movement of the supplies and any interim storage necessary must also be made well in advance of the estimated time of arrival of the ship.

National transport

Transport networks

36. In many countries, existing transport services do not have a large spare capacity or may not serve the area where the refugees are located.

37. Where a suitable rail network exists, this can be an effective way of moving supplies. However, many railway systems are either congested or short of rolling stock (the locomotives and carriages used by railways) and long delays may be encountered. In most cases, onward movement by road to the final destination will be necessary.

38. Assess rail, road and inland waterway capacity, journey times, reputable trans-

port contractors, freight rates, capacities and facilities at trans-shipment points (for example transferring goods from ferry or rail to road), and availability of fuel supplies and maintenance facilities. Explore if other humanitarian agencies have spare transport capacities.

Evaluate various transport corridors (including reception capacity) for cost and speed of delivery – even airlifts may not always significantly reduce delivery time.

Road transport

39. Light vehicles will be needed for staff and for specific purposes such as ambulances, and heavy vehicles for transporting cargo, and for transporting refugees in repatriation operations.

40. There must be appropriate servicing facilities, including fuel, spare parts, and administrative support. Special arrangements, e.g. establishing workshops, may be necessary.

Managing a transport fleet requires strong administrative skills, good communications and close coordination with the procurement and other functions to ensure efficient timing for collection and delivery.

Assessing and planning vehicle needs and servicing facilities is described in Annex 2.

41. Drivers must be given training in UNHCR procedures. A sufficient number of drivers must be hired to ensure that recommended working hours are not exceeded.

Accident rates increase markedly with tired drivers.

A system must be established to monitor and control vehicle use, (see Annex 4 for an example of a vehicle log sheet). For light vehicles, drivers should be assigned to a specific vehicle for which they should be responsible.

42. In some situations, urgent action may be necessary in order to improve access roads. Technical advice will be of paramount importance in deciding how improvements should be made (seek advice through Technical Support Section at Headquarters). These improvements could be undertaken by the ministry of transport (or appropriate authority), perhaps supported by refugee labour. In some situations, careful briefing will be required about alternative routes in case usual roads are impassable.

43. Vehicles, bicycles, or animal or hand carts could be used for final distribution. Observe how local movement of supplies normally takes place.

Transport capacities

44. If a commodity is to be transported by truck, the number of trucks needed should be calculated from the following information:

- i. The quantity of goods to be transported in weight and volume.
- ii. The type of commodity to be transported, such as fragile goods (special handling) and temperature sensitive (special cooling system).
- iii. Type of truck available and its capacity in payload and volume.
- iv. How long a round trip takes (including loading and offloading).
- v. Time allowed for routine maintenance capacity or time allowed for other known factors (driver breaks).
- vi. A margin for unpredictable events (such as breakdowns, accidents, bad weather, road and bridge repairs). The size of this margin will depend on many factors including the likelihood of new arrivals and the need to build up buffer stocks near the refugees. In difficult conditions, the theoretical capacity might need to be increased by 25% or more.

45. To give an example for food:

- i. The number of refugees served is 30,000 who need 500 g/person/day, which is total 15,000 kg /day, or 15 MT /day.
- ii. Truck capacity is 20 MT per truck.
- iii. The rainy season journey time from the port of entry to a regional warehouse serving the 30,000 refugees is 3 days out and 2 days back.
- iv. One day per round trip is added for routine maintenance.
- v. The road surface can take a truck and trailer with a combined payload of 20 MT.

46. Therefore it will take 6 days for one truck to transport one 20 MT load, and 30,000 refugees will require 90 MT of food every six days. Therefore the theoretically required capacity is for 4.5 such trucks. In such circumstances, it is clear that six trucks would be the prudent minimum.

47. Appendix 1 (Toolbox) sets out the capacities of different means of transport.

Transporting people by road

48. Logistical support will be necessary when transporting people for e.g. repatriation operations or relocating refugees to another site. Ensure there is close coordination with health and community services. Take particular care to look after vulnerable individuals, and minimize any risk of family separation. Passengers must be registered on a passenger manifest, wristbands should be used whenever possible, and water and food provided if it is a long journey. Ensure trucks have safe access (for example ladders).

49. When transporting medically vulnerable individuals such as pregnant women, it is preferable to use buses or ambulances. If trucks must be used, weigh the trucks down with sand bags to minimize the roughness of the transport. If there is a risk that some passengers might have a

contagious disease, disinfect the vehicles after the journey.

50. Determine the number of light and heavy vehicles needed. These could include minibuses for 8-12 passengers to transport staff and vulnerable individuals, ambulances or mobile clinics (ask health staff about specifications), vehicles for transporting possessions, and mobile workshops.

51. If a convoy is necessary, plan for escort vehicles at the front and back of the convoy. If the operation involves many journeys over a short distance, consider having roving patrols with telecommunications, in case there are problems or breakdowns. For further details, see Supply Management Handbook, section on moving people.

Reception of goods

- ◆ Have a single consignee and address and inform Headquarters of any changes.
- ◆ Use the internationally accepted marking and packaging standards.
- ◆ Inspect goods on arrival and register insurance claims: supplies can get lost or arrive damaged.
- ◆ Advance arrangements with appropriate government authorities and freight forwarders will be necessary for rapid handling of supplies from abroad.
- ◆ Develop and promulgate a clear policy for customs clearance procedures for NGOs.

Consignment

52. Ensure offices sending supplies know who the consignee is. The consignee would normally be the Representative, with an indication in brackets of any special instructions, for example “For (name of project/NGO)”.

Have the same consignee and address for all items required from abroad for the UNHCR emergency operation.

However, where UNHCR was not previously present it may be better to consign c/o a UN organization already well known in the country, for example United Nations Development Programme (UNDP), provided no delays will result. Similarly, there should be a single consignee and address at the camp level.

53. Whether purchases are made locally or abroad, proper packing, labelling, marking are essential. All organizations and donors need to use a uniform system for marking or labelling relief consignments – use the following guidelines:

- i. Colour code: The colours used for the relief supplies are: red for foodstuffs, blue for clothing and household equipment, and green for medical supplies and equipment;
- ii. Labelling: If necessary the consignment should bear one of the international hazard warning signs (fragile, no hooks, keep dry, etc.). Consignments of medicines should state on the outside of the package the content and the medicines' expiration date and whatever temperature controls are necessary. English or French should be used on all labels and stencilled markings, though another language may be added. It is essential that the final destination (or port of entry) appears at the bottom of the label in very large letters;
- iii. Markings: All internationally or regionally procured goods will normally be marked with the UNHCR project code, purchase order numbers, commodity, packing specifications, port of entry and the consignee. Relief supplies should always be packed by commodity type. Mixed consignments create problems in

warehousing and in the ultimate distribution at the receiving end. The colour code recommended loses its value if, for example, medical supplies are packed in the same container as food;

- iv. Size and weight: Packing units should be of a size and weight that one person can handle (ideally, 25 kg; up to a maximum of 50 kg) since mechanical loading and unloading equipment may not be available at the receiving end.

Advance notice should be sent to the consignee. The following information (preferably in one document) is essential, for safe transport and ease of handling at the receiving end:

- i. name of sender (or “shipper”) – normally the Supply Management Service in Headquarters;
- ii. name of consignee;
- iii. method of transport, the name of the vessel or the number of the flight or truck, estimated time of arrival, port or airport of departure, and name of transporter (e.g. aircraft of shipping company);
- iv. a detailed list of contents, including weight, dimensions, and number and type of packing units;
- v. a pro-forma invoice or gift certificate showing the value of the consignment;
- vi. if the consignment is insured then the type of insurance, name of company, etc.;
- vii. the clearing agent, including the name of the person to be contacted in the receiving country; and.
- viii. instructions or special requirements for handling and storing the supplies

An acknowledgement should be sent to the sender as quickly as possible after consignments are received, and indicate whether the goods were received in good order and/or there was any loss or damage.

Clearance procedures

54. The supplies coming in for the operation may far exceed the scope of the routine arrangements between the authorities and the local UN community. Problems and delays may be avoided by discussing in advance the procedures to be followed by UNHCR with senior officials in the foreign ministry, ministry of finance, customs authorities, and airport and port authorities. The aim is immediate release of incoming supplies.

Arrangements for clearance procedures and duties exemptions must be made in advance.

55. Arrangements will need to be made with:

- i. The Civil Aviation Authorities (CAA) and airport authorities for priority clearances for relief flights (whether international or national) and waiver of fees. These arrangements include: over-flight clearance; free landing rights, air traffic control and parking; priority handling of aircraft and charges at cost for handling services.
- ii. The ministry of finance and customs authorities for exemption from duties and taxes of goods and services (such as the tax element of landing fees and fuel tax). Ensure the Ministry of Finance (as well as the CAA) have been advised in advance of planned airlifts for the operation.

56. UNHCR's cooperation and/or implementing agreement with the government should allow for the duty-free import of all items, provided that they are required for the operation (see chapter on implementing arrangements, and the UNHCR Checklist for the Emergency Administrator). Special duties exemption and customs clearance procedures may have to be developed for the emergency.

Implementing partners' clearance

57. UNHCR can undertake the customs clearance for implementing partners' relief supplies, provided these meet the purposes of the emergency operation. This will allow some control over the arrival of clearly unsuitable goods, and help in the coordination of material assistance.

58. Guidelines should make it clear to all potential consignors that UNHCR will undertake to clear only supplies for which notification is received prior to dispatch and which are considered appropriate. The guidelines should be made available to implementing partners active in the operation and to new implementing partners on arrival.

Guidelines on customs clearance for implementing partners should be drawn up as early as possible in the operation.

A copy of these guidelines should be shared with Headquarters and reference to this general procedure made in any NGO briefings at Headquarters, as well as in the first few general sitreps.

Handling costs and other fees

59. The expenses incurred in customs clearance, handling, storage, and onward movement of supplies belonging to UNHCR should be budgeted for. UNHCR might receive supplies procured by an implementing partner on their behalf, in which case all expenses involved should normally be borne by the implementing partner, and UNHCR will be the "consignee of convenience" (not the "owner" or "donee"). However, in certain circumstances and provided the supplies are items directly foreseen in the UNHCR operation (for example blankets, tents), UNHCR may also meet onward transportation costs.

Inspection and damage

60. All consignments must undergo a visual and quantitative inspection on arrival

(by staff) and some deliveries will be required (under government regulations) to undergo a qualitative inspection by a government designated inspection company.

61. If during the inspection, visible damage is noted, the damage must be clearly indicated on the shipping documents and a claim lodged against the last transporter within three days of receipt of the goods. The claim should indicate the dollar value at which UNHCR holds the transporter fully responsible for the loss or damage. A copy of the claim should be sent to the Supply Management Service in Headquarters who will follow up. The value of the loss or damage must include any associated transport costs. If damage is not visible and the packaging is undamaged, transporters will only accept a claim if it is lodged within seven days of receipt of the goods. Take photos of the damaged goods before signing for receipt of the shipment.

Do not accept supplies that do not meet contract specifications.

Headquarters should always be informed immediately of any damage or shortfalls or if the products do not meet specifications.

Insurance

62. Some damage, whether during transport or storage, is inevitable and considerable sums may be involved in the loss. Internationally procured supplies are insured against loss or damage in transit. Insurance claims must be reported to SMS for processing.

Storage

- ◆ There must be appropriate storage capacity, correctly sited.
- ◆ The requirement for buffer stocks must be properly calculated and forecasted – do not hoard “just to be prepared”.

Basic requirements

63. Goods must be protected from damage due to bad handling or improper stacking; the adverse climatic effects of the sun, rain, cold or humidity; attacks by pests; and bacteriological decomposition of both food and non-food items over time.

64. Storage facilities may be required for:

- i. initial storage near the port of entry;
- ii. transit storage at certain key trans-shipment locations;
- iii. local storage no farther than one day’s transport from the refugees; and
- iv. storage at camps.

See Figure 1 for information about location of storage facilities.

65. Warehouses must be accessible in all seasons and weather – plan well in advance of the winter or rainy seasons. Existing government warehousing should be used if it meets operational requirements.

66. Security of supplies must be ensured. Warehouses must be secure against theft, and should be lit if possible. Storage for local purchases should be the responsibility of the supplier whenever possible. Particular attention must be paid to those items requiring special storage.

67. A single large building is better than several small ones, as long as there are sufficient loading doors and access ramps. The doors must be large enough to allow for quick loading and offloading and small enough to keep control of the entry and alleyways.

68. Organize the distribution and storage system so that supplies are handled a minimum number of times. This will not only incur less costs, but also less damage and loss. Remember the rule “first in first out” for stock management and avoid offloading in the rain.

Considerations in warehouse selection

69. Warehouses should be well-constructed, dry, well-ventilated, and provide protection from rodents, insects and birds. The floor should be flat and firm and the building should be easy to access, with suitable arrangements for loading and unloading (e.g. a ramp or platform).

70. When selecting a warehouse check the following:

- state of the roof and ventilation;
- state of the walls and whether they are water tight;
- state of the floor, its insulation and general water drainage;
- number of traffic lanes and doors;
- availability of handling equipment and labour;
- utilities (water, electricity, toilets, fire protection);
- office space and lodging for drivers and guards;
- special configuration as necessary for example for fuel, construction material, water reserves; and
- fences, guards, and secure doors and windows.

71. Warehouse capacity required will depend on the nature, variety and quantity of goods supplied, the numbers of refugees they serve, and what outside support they need. Buffer stocks of essential items, particularly food and fuel, should be built up close to the refugees.

Sufficient stocks should be on hand to cover likely interruptions in the delivery schedule. As a rule of thumb, this should cover one to three months distribution.

Conversely, care should be taken not to hold unnecessarily large stocks of items that are not immediately required by the refugees, e.g. seasonal items such as heaters or blankets.

72. The volume of a warehouse necessary to store a given commodity may be rough-

ly estimated as follows. First calculate the volume of the goods. As an indication:

1 Metric Tonne of	Occupies approximately
Grain	2 m ³
Medicaments	3 m ³
Blankets (approx. 700 heavy blankets per bale)	4-5 m ³
Blankets (loose)	9 m ³
Tents (approx. 25 family tents)	4-5 m ³

If the goods can be stored to a height of 2 metres, the minimum surface area occupied by the goods will be half their volume. Increase this surface area by at least 20% to allow for access and ventilation.

73. For example, the approximate size of a store to hold 2 months' supply of the cereal staple for 30,000 refugees receiving an individual cereal ration of 350 g/day would be:

$$350 \text{ g} \times 30,000 \times 60 \text{ days} = 630 \text{ MT}$$

$$1 \text{ MT of grain occupies } 2 \text{ m}^3$$

$$\text{Therefore } 630 \text{ MT occupies } 1,260 \text{ m}^3$$

1,260 m³ stored to a height of 2 m gives a surface area of 630 m², add 20% for access = 756 m² of floor space. A building some 50 m long by 15 m wide would therefore be indicated.

Warehouse construction

74. If suitable storage facilities do not exist, they may have to be built. Local techniques, materials and practices are likely to be the most appropriate in the longer-term. However, for rapid construction, it may be necessary to use prefabricated (tent) warehouses as a temporary measure. These should be carefully sited, protected from surface water by digging ditches if necessary, and with raised platforms inside (for example using pallets, or groundsheets on sand). The contents must not touch the tent walls. Prefabri-

cated warehouses are held as part of the UNHCR central emergency stockpile. They are 24 m long x 10 m wide with a capacity of between 750 to 1,100 m³.

Stock management

- ♦ Effective stock management and security are imperative and must cover the whole supply chain through to the final distribution to families or individuals.
- ♦ Report on stock levels, movements, losses, damage and distribution using the UNHCR Commodity Tracking System (CTS).

75. The stock management system should ensure that initial low quantities of goods can be put to best use and quickly into distribution.

A sound stock management and distribution system is essential in order to identify potentially critical shortages in time and assure final delivery to the beneficiaries.

Levels of relief may not meet total requirements of the beneficiaries – the agencies involved must identify what goods should be immediately distributed and to whom.

76. The stock management and distribution system should identify what has been ordered, where the goods are, when they will be delivered, and where they have been distributed. This information must be available to those responsible for the operation.

77. Control mechanisms include verifying the bulk consignments on arrival, physical stock checks in the warehouses, individual ration cards or distribution checks at the sites and carefully calibrated measures (scales) for final distribution. The nature of these mechanisms will depend on the circumstances, but they must be in place from the start and they must provide real and not just theoretical control. The supplies actually distributed to the refugees must be reconcilable with those known to

have been delivered, those remaining in storage, and those which are lost or damaged.

78. In the emergency phase certain basic controls should be established at once, in addition to the controls over actual distribution. These are described in Annex 3.

79. The UNHCR Commodity Tracking System (CTS) is a computerized tool for stock management, which uses information from purchase orders and shipping and warehouse documentation (described in Annex 3), to track goods from their arrival at the port of entry of the country of operation, to the final distribution point. An additional module (“pipeline management module”), which can be attached to the CTS, tracks goods from the point of source (globally) to the port of entry.

80. The stock control and distribution system (including CTS) provides information to fulfil reporting obligations – ensure the system takes account of reporting needs as specified by Community Services, Field and Programme Officers. See UNHCR Commodity Distribution, A Practical Guide for Field Staff for further guidance, in particular on setting up a reporting system for distribution.

81. Supply Management Service in collaboration with MSRP is in process of developing a Fleet Management System (FMS) which is a computerized tool for fleet management, which keeps track of the maintenance and repair of vehicles, generators, etc., of fuel consumption, vehicle insurance, and the registration of vehicles, their re-deployment and disposal.

82. Assistance with setting up the CTS or FMS (when it is ready) can be obtained from Supply Management Service, Geneva. Both CTS and FMS will be part of the MSRP when it is implemented in the field.

Annex 1: Standard specifications for certain common relief items

These specifications can be useful in drawing up tender requests where local purchase is possible, to assist in negotiations with suppliers, and to give a clear indication of what could otherwise be supplied at short notice through Headquarters (some items are available in the emergency stockpile – see Appendix 1, Catalogue of Emergency Response Resources).

1. High Thermal Fleece Blankets – Item no 2028

Composition: Polyester – 100 % - TOG (Thermal Resistance of Garment): min: 1.5

Bursting Strength: 350 kpa, min: 25 kg both ways – Thickness: min 3.5 mm under load of 20g/cm² – Weight: 250g/m² – Colour: Assorted colours (Dark Blue, Grey, Brown, Dark Red)

Dimension: 150 cm x 200 cm – Edges: Folded and Stitched

Marking: UNHCR Logo printed. Size of logo 40cmX40cm to be placed in the centre of blanket.

Packing: a) in bales of 30 blankets secured with polyester band; b) the size of bag shall be as the size of the folded blanket, namely: 45 x 35 x 65 cm in order to improve stability and stackability of the bales; c) the bales should be compressed.
– Gross weight per bale: Approx. 23 kg
– Number of blankets per 20' Container – 5,250 (without pallets);

2. Woven dry raised blankets (Type B) (for cool climates)

Composition: Woven, minimum 50% wool. Balance of new synthetic fibre

Size: 150 x 200 cm, thickness 5 mm

Weight: 1.5 kg

T.O.G.: 2.0 - 2.4 (thermal resistance of garment)

Finish: 10 stitches/decimetre or ribbon bordered 4 sides

Packing: Compressed watertight wrapping in pressed bales of 30 pcs. Each bale of 30 pcs would be about 0.35 m³ volume and weigh 50 kg.

3. Heavy duty plastic bucket, 10 litre

Type: Heavy duty plastic bucket, multi purpose, with lid

Material: High density polyethylene (HDPE), food grade material, conical seamless design

Handle: Steel-wire bale handle, fitted with plastic roller grip, rust proof

Thickness: Minimum 1.0 mm

Dimensions: Approx. top diameter: 30 cm; approx. height: 30 cm; volume 0.01 m³

Weight: 450 g

4. Jerry cans, 10 litre Semi-collapsible jerry cans

(Semi-collapsible jerry cans are the preferred option because of the much lower shipping volume, but they are sometimes difficult to obtain locally).

Type: Semi-collapsible plastic jerry cans for drinking water

Material: Manufactured of food grade HDPE (i.e. containing no toxic elements)

Construction: Semi-collapsible; built-in carrying handle, wide enough for adult hand; screw cap linked to container by polyimide string; jerry can opening 35 mm (inner diameter); 0.6 mm thick walls.

Impact resistance: Must withstand drop from minimum 2.5 m containing maximum volume

Operating temperature: -20 to 50°C

Weight: 200 g/pc

Packaging: 150 pcs/wooden crate. Each crate weighs 49 kg, volume 0.38 m³

Non-collapsible jerry cans

As above, except non-collapsible, weight 400 g/pce; 1 mm thick walls; jerry can opening 40 mm (inner diameter)

5. Kitchen sets

Kitchen sets – Type A

- a) 1 aluminium cooking pot, 7 litre, minimum thickness 1.75 mm, with lid minimum thickness 1 mm, two cast aluminium handles, sandpaper finish.
- b) 1 aluminium cooking pot, 5 litre, as above, minimum thickness 1.6 mm.
- c) 5 aluminium bowls, minimum thickness 1 mm, 1 litre capacity, rolled edge border, sandpaper finish.
- d) 5 deep aluminium plates, minimum thickness 1 mm, 1 litre capacity, sandpaper finish.
- e) 5 aluminium cups, minimum thickness 1 mm, 0.3 litre capacity, with handle, rolled edge border, sandpaper finish.
- f) 5 stainless steel table spoons, polished finish.
- g) 5 stainless steel table forks, polished finish.
- h) 5 stainless steel table knives, polished finish.
- i) 1 kitchen knife with stainless steel blade, cutting edge 14/15 cm long, 2.5 cm wide with moulded plastic handle.
- j) 1 galvanized steel bucket, 15 litre, 0.5 mm thick, tapered with raised bottom, curled brim and metal arch handle.

Packing: Individual carton: 30 x 30 x 33 cm = 0.02 m²

Weight: Approx. 5.5 kg

Kitchen sets – Type B

Consists of the following items: a, b, c, (or d) e, f and optionally i).

Packing: 4 sets per carton: 56 x 56 x 19.5 cm = 0.06 m²

Kitchen Sets – Type C

Consists of the following items: a, c, (or d) e and f.

Packing: 4 sets per carton: 54 x 54 x 19.5 cm = 0.05 m²

6. Reinforced plastic tarpaulins in sheets

Sheets are 4 m x 5 m each.

Material: Made of woven high density polyethylene fibre; warp x weft (12/14 x 12/14 per inch); laminated on both sides with low density polyethylene with reinforced rims by heat sealing on all sides and nylon ropes in hem; 1000 denier min. Stabilized against ultraviolet rays and excess heat for long outdoor exposure (1.5% loss of strength in yarn and in lamination); provided with strong aluminium eyelets or equivalent on four sides of the sheet at 100 cm centre to centre.

Dimensions: Thickness: 200–230 microns; weight 190 g/m²; density 0.9–.95 kg/cubic decimetre.

Tensile strength: Min. 600 N both directions of warp and weft (BS 2576, 50 mm grab test or equivalent).

Tear resistance: 100 N Min. both directions (BS 4303 wing tear or equivalent).

Heat/cold resistance: Flammability: flash point above 200°C.

Colour: Blue one side white on reverse; UNHCR logo.

Weight: 4.8 kg per piece, packed in bales of five, weight per bale 22.5 kg; volume per bale 0.045 m³.

7. Soap bars:

Composition: Min. 70% fatty acid: max. 20% moisture, max. NaOH 0.2% max. NaCl 1.25%; no mercury content. Local standards of lower content of fatty acid might be acceptable.

Weight: Soap bars should be approx. 125 g/piece.

8. Double Fly double fold centre pole tent

Family sized tent.

External dimensions: 4.4 m x 4.4 m (outer fly), surface area 19.36 m², centre height 3 m.

Internal dimensions: 4m x 4m, floor area 16 m², centre height 2.75 m, side wall height 1.8 m (25 cm distance between outer and inner fly).

Material: Cotton canvas; 100% cotton yarn (10/2 x 10/2 twisted in warp 42/44, weft 24/26 threads per inch, plain weave); 15–16 oz/m². Canvas to be free of weaving defects and finishing faults adversely affecting strength, waterproofness and durability. Water proofing/resistance to water penetration by paraffin wax emulsion and aluminium acetate to withstand 20–30 cm hydrostatic head. Stabilization against decomposition of the fabric (rot-proofing) with copper naphthanate.

Poles/ropes/pegs: 4 aluminium or bamboo poles for roof corners (2 m x 22 mm diameter); heavy duty sectional steel tube (or aluminium or bamboo) centre pole, plastic clad or galvanized (3 m x 50 mm diameter). Complete with ropes made of 9mm 3 strand polypropylene; 24 T-Type bars 40 mm x 40 mm, 50 cm long; 12 iron pegs (25 cm x 9 mm diameter), one iron hammer of 1 kg; one repair kit with one straight and one curved needle with 20 m of suitable thread for tent repair, illustrated assembly instructions with list of contents.

Groundsheet: Reinforced PVC groundsheet 250g/m².

Packing: All rolled into a canvas bag. Weight 100–130 kg, dimensions: 2 m x 50 cm diameter (0.4 m³).

Annex 2: Planning vehicle needs

1. Assessing needs

Assessing vehicle needs involves not only calculating the vehicles which are needed, but also assessing what vehicles it will be possible to operate and maintain in the area of operation. Make sure that the existing infrastructure (roads, workshops and fuel) is fully evaluated before obtaining vehicles.

What will the vehicles be used for and how many are needed?

Heavy vehicles

- i. Will the vehicles be used for transporting people or relief supplies?
- ii. What will be the frequency of use (one-off transport, or scheduled deliveries for distribution)?
- iii. What is the total quantity (of goods or people) to be transported?
- iv. Are any special configurations necessary: if a truck is to carry dangerous goods e.g. fuel, ensure that dangerous goods regulations are followed.

Light vehicles

- i. How many vehicles are needed for staff? In an emergency, it is advisable to have a ratio between light vehicles and international staff of 1:1. In more stable situations, slightly fewer vehicles per staff member may be acceptable.
- ii. What special vehicles might be needed (e.g. ambulances for transporting vulnerable refugees)? The main categories of light vehicles which might be useful are: sedan and minibus (4x2 only), and station wagon, van, pick-up, and ambulance (both 4x2 or 4x4).

What configurations of vehicles are needed?

- i. What is the condition of the routes that will be used? Tarmac roads, good unpaved roads (with stone or macadam surface), sand or dirt trails, or no roads (in which case consider animals for transport).
- ii. How long are the journeys expected to be?

Light vehicles

- i. What configuration light vehicles should be used according to road conditions: 4x2 or 4x4?

Heavy vehicles

- i. What configuration for heavy vehicles should be used according to the road conditions: 4x2, 4x4, 6x2 or 6x4?
- ii. Should trailers be used? Trailers can be more economical, i.e. with a relatively small investment one is able to transport twice the amount of cargo. The following configurations for heavy vehicles (trucks/trailers) could be appropriate:
 - i. Truck with trailer (6x2 or 6x4) with a combined capacity of 20-40 MT for transport up to 3,000 km, 2-7 day trip, normally for use on tarmac roads.
 - ii. Truck (6x4, 4x4, 4x2) for intermediary distribution with a capacity of 10-15 MT (normally 1 day trip) on unpaved roads with stone or macadam surface.
 - iii. 5-10 MT capacity trucks on tracks and trails (generally for trips of half a day or less up to distribution points).

Trailers

Prior to purchasing trailers, the following additional questions should be considered:

- i. Are the roads and bridges suitable to drive on with trailers?
- ii. Are the drivers capable of driving with trailers?

- iii. What are the regulations in the country regarding the weight and length of truck-trailer combinations?
- iv. What type of trailer is needed? Can the trucks be operated with trailers or would tractor trailers be better? Can the trailer be transported on the truck on empty runs? Ensure there are air-brakes, a towing hook, extra fuel tanks and spare wheels. Particular attention must be paid to the tow-bar strength and number of axles.

What makes and models of vehicles would be appropriate?

- i. What makes of vehicles are maintained (to supplier specifications) by local service dealers? The heavy vehicle fleet must be standardized to suitable makes and models already operating in the country. If a mixture of models of truck is unavoidable, it may still be possible to standardize to a single make.
- ii. What is the availability of vehicles: the spare capacity of local transport companies, and possibility of purchasing new or second hand vehicles?

Infrastructure (fuel, workshops)

- i. Is there a service network available with the know how to maintain the fleet, or will it be necessary to set up dedicated workshops and fuel stations?
- ii. Are there sufficient spare parts and tyres in the local market, or must they be imported?
- iii. Is fuel (diesel and gasoline) and are lubricants readily available in the area of operation? (note the number of fuel stations, capacity and likely availability of fuel at each).

2. Sourcing vehicles

Vehicles (whether light or heavy) can be: rented locally, provided by the government, loaned from another UN Office in the region, re-deployed from another

UNHCR operation, or purchased. Heavy duty vehicles can also be provided under a standby arrangement (see Catalogue of Emergency Response Resources, Appendix 1). If trucks are to be purchased internationally, send a request to the Supply Management Service in Headquarters by completing the appropriate form (Operations Analysis Form for Trucks – request this from Headquarters if necessary).

In order to analyze the procurement options, take into account the following:

- i. Expected length of operation. If the expected length of the operation is short, (3 - 6 months), or the situation is very unstable, it may be better to rent, loan or re-deploy rather than purchase vehicles, because of high initial costs.
- ii. Comparative costs. Compare the cost of renting vehicles with the cost of purchasing them (including delivery costs). Consider purchasing second-hand vehicles if they are in good enough condition.
- iii. Servicing and other benefits. Take into account that renting vehicles will include servicing and other benefits (such as drivers, insurance) which would need to be separately arranged if the vehicles are re-deployed, purchased, or loaned.
- iv. Time. Light vehicles can be quickly deployed from the UNHCR emergency stockpile (see Appendix 3). Purchasing new vehicles can be very time consuming, because of long delivery times (up to 8 months if they are manufactured to order, which is usually necessary for the configuration of heavy duty vehicles for UNHCR operations). If there is an urgent need for heavy vehicles, inform Supply Management service at Headquarters of the vehicle requirements and infrastructure, who will look into possible options

(re-deployment, purchase etc.) in the international market and regionally. If it becomes necessary to purchase vehicles, early notification and action will be a priority.

- v. Other options. Consideration could also be given to the possibility of “grafting” the heavy vehicle fleet onto a large national or regional transport organization. That organization’s infrastructure, including workshops, offices, etc. would then be immediately available as would its accumulated experience of operating in the country.

The vehicles exclusively involved in the operation should be individually numbered and distinctively marked – for example, white with blue markings.

3. Fuel and maintenance facilities

There must be adequate servicing facilities, including sufficient supplies of fuel and spare parts. Maintenance and repair must be carried out regularly and as per manufacturers’ standards, either through local service dealers or through a UNHCR workshop. Regular maintenance will prevent minor problems turning into major ones. Proper driving and care by the drivers can be an important factor in keeping vehicles on the road and prolonging their life. Adequate training, incentives and supervision will be the key to this.

Fuel and lubricants

- Assured supplies of fuel and lubricants must be available where they are needed (make sure oil and lubricants are in accordance with manufacturer’s specifications – and new). This may require separate, secure storage arrangements and an additional fleet of fuel tanker vehicles. It may be necessary to establish fuel stations to ensure fuel supplies.

Spare parts and workshops

Consumable items (filters, shock absorbers, brake linings etc.) and spare parts must be available, especially tyres: tyre life may be no more than 10,000 km in rough desert or mountain conditions. Arrangements for maintenance and repair include:

- i. Making use of or strengthening existing facilities:
Existing commercial, government or UN facilities (e.g. WFP or DPKO) may be able to service additional UNHCR vehicles or could be strengthened in order to do so.
- ii. Establishing dedicated workshops:
Workshops may have to be established by UNHCR solely for the operation – for example a central, fully equipped workshop, including personnel, tools, soldering capacity, spare parts store, and transport administration office. In addition, depending on the size and area of the operation, consider also having smaller workshops and transport administration offices closer to isolated destinations.
- iii. Mobile workshops and heavy recovery vehicles may also be necessary:
Always ensure there is recovery capacity for trucks, such as mobile workshops, recovery trucks, winches, etc.

Annex 3 – Stock management systems

This annex gives an indication of the basic components of a stock management system. The minimum level of controls necessary will vary with each operation. Simple controls and accounting established from the start will be much more effective than a sophisticated system later. No system will be effective unless it is understood by those required to operate it. Training will be required for all staff involved. All these documents are UNHCR forms apart from waybills. The compu-

terized UNHCR Commodity Tracking System (CTS) relies on the information contained in this paper system.

1. Stock control

- i. Pipeline report: Each order or consignment (including contributions in-kind), should be tracked using a pipeline report. This records all stages of stock movement from the initial request for goods through, as applicable, requests for tenders, placing of order, notification of shipment, planned delivery time and place, actual time of arrival, and distribution details.
- ii. A simple board where progress can be monitored visually is likely to be very useful and can be set up at once.

2. Source documents

Source documents identify the quantity of the commodity, specifications, packaging, value and origin.

- i. Purchase order. This defines the order: specifications, number of units ordered, price/unit, total price, packaging, date of purchase, supplier, destination etc. It should make reference to the legally enforceable standard conditions of contract.
- ii. Contribution Advice Form (CAF)/ Donation Advice Form (DAF). When contributions in-kind are pledged, Fund-raising and Donor Relations Services in Headquarters issues a CAF or DAF. This gives similar information to a purchase order and the information should be used to track the goods until final distribution in order to account to the donor as stipulated in the CAF/DAF.

3. Authorization documents

- i. Release request. This is a formal request for goods which authorizes warehouse staff to release goods from stock.

- ii. Transporting/warehouse request.
This gives formal approval for NGOs to use UNHCR transport or warehouse facilities for their goods.

4. Certification documents

There are a number of documents which are used to certify that goods have been received, delivered, and/or sent in good order.

- i. Waybill/air waybill/bill of lading.
This is the shipping document and contract with the transporter showing the destination and accompanies the goods from the port of loading to the contracted destination in duplicate. This document is the basis for customs clearance and enables staff to check goods actually received against those loaded. Duplicate copies are also used by procurement staff to verify goods dispatched against those ordered (i.e. against the purchase order form). Where the movement is between UNHCR warehouses, use the delivery note (attached as Annex 4).
- ii. Release note. This is used when goods are collected at the warehouse and the goods leave UNHCR's stock control system – the person (driver or consignor, for example an NGO) who collects the goods certifies that goods have been received in good order.
- iii. Delivery note (see Annex 4). The delivery note is sent with the goods when they are transported (under UNHCR's control) to another location (for example another UNHCR warehouse). The receiver of goods signs the delivery note to certify that the goods have been received in good order, and a signed copy is returned to the sender. It is used when the goods have been sent by rail, road or barge (an "Aircargo Manifest" is used where the goods have been transported by air).

- iv. Receipt note: Where goods have been received without a delivery note or waybill/bill of lading, a receipt note is signed by the receiver of the goods and sent to the sender for certification.

5. Warehouse documents

Whatever the size of the warehouse or store and wherever it may be located, the minimum recommended book-keeping controls are those outlined below. They must be complemented by routine inspection to ensure goods are properly stored and protected, and by a periodic audit.

- i. Daily incoming shipment log sheet.
This is used to record basic details of all inward consignments – description of goods, quantity, supplier, name of person receiving and date of receipt, with cross reference to waybills (above).
- ii. Daily outgoing shipment log sheet.
This is used to record basic details of all outward consignments – description of goods, quantity, destination, and date of dispatch, (with cross reference to waybill, delivery or receipt note).
- iii. Stock card (sometimes called a bin card). One stock card for each different commodity in the warehouse is used to record every in and out movement of that particular commodity, with cross reference to the appropriate entries in the incoming/outgoing log sheets. It gives a running balance. Where possible those actually receiving and issuing the goods should not also be responsible for maintaining the stock card.
- iv. Daily stock report (see Annex 4).
This gives basic details of goods in stock and the quantity, value, weight of these commodities for each warehouse location.
- v. Loss/damage report: to report loss or damage to stock (whether incurred during transport or storage).

Movement of goods

The easiest control to ensure that goods reach their destination may be to make (final) payment (for the goods, of the driver or transporter, as applicable) conditional on return of the certified duplicate of the delivery note or waybill. More comprehensive controls and measures (e.g. monitors) may be required later, and are

anyway needed to ensure that goods reach their destination (in the worst case, this control only indicates that they did not). But provided the signatories for both authorization and receipt are carefully chosen, and signatures controlled (combining them with a UNHCR seal is recommended), this should be an effective initial safeguard.

Voluntary repatriation, resettlement and local integration are the commonly accepted three ‘durable solutions’ to refugee crises. Nowadays regarded as the principle solution for the majority of situations, voluntary repatriation where and when feasible brings alive everyone’s human right to return home.

Situation

As political, security and other changes in a number of refugee-producing countries may unfold at an unexpectedly fast pace, it is not always possible to carefully design and plan return and reintegration operations. Voluntary repatriation operations may have to be organized at short notice, and therefore require at times “an extraordinary response and exceptional measures”.

When conditions in the country of asylum are perceived as being more dangerous and life-threatening, and all other solutions have been exhausted, repatriation may amount to emergency evacuation. Under such circumstances, life-saving return makes up for the lesser of evils.

Principles of response

The decision whether or not to return home belongs to the refugees. They should neither be forced to return, nor prevented from doing so. Repatriation should be based on a free and informed decision and take place in safety and dignity. The voluntary nature of the repatriation must be verified and safeguarded by UNHCR.

Voluntary return should only be undertaken where there has been a fundamental change in the circumstances causing displacement. Its success largely depends upon the achievement of a reintegration process relentlessly supported by all stakeholders.

Action

Collect and analyse information in the country of origin concerning the conditions for return, share this information with the refugees.

Define the nature of UNHCR’s involvement in the repatriation, communicate this to all staff, and to governments and other agencies as appropriate.

Deploy sufficient staff to collect information on the intentions of the returnees and to assess whether the repatriation is voluntary or not.

Provide assistance to returnees in every stage of the return operation, including monitoring of their treatment upon arrival in the area of final destination

Introduction

1. Voluntary repatriation is usually characterized either as:
 - i. “spontaneous”, i.e. where refugees return by their own means; or
 - ii. “organized”, i.e. where refugees return in an organized manner assisted by UNHCR.
2. Spontaneous return tends to take place amidst or in the wake of conflict situations. As and when growing numbers of people spontaneously opt to go back UNHCR usually adjusts its planning assumptions and repositions its presence to provide timely and effective protection and assistance along routes of return and in the country of origin. UNHCR needs to established first and foremost whether it will assist at all in conflict situations, which will depend entirely on the particular circumstances of the situation.
3. Early presence in the prospective areas of return should be sought to establish monitoring systems to gather information on the conditions prevailing in the country of origin and which will be provided to the refugees (e.g. concerning landmines, routes of return and overall conditions).

UNHCR's role in voluntary repatriation

4. UNHCR's role in voluntary repatriation includes the following:

- i. Verify the voluntary character of refugee repatriation.
- ii. Promote the creation of conditions that are conducive to voluntary return in safety and dignity.
- iii. Promote the voluntary repatriation of refugees once conditions are conducive to return.
- iv. Facilitate the voluntary return of refugees when it is taking place spontaneously.
- v. Organize, in cooperation with NGOs and other agencies, the transportation and reception of returnees, provided that such arrangements are necessary to protect their interests and well-being.
- vi. Monitor the conditions of returnees in their country of origin and if guarantees given by the country of origin are adhered to. Intervene on behalf of the returnees if necessary.

5. UNHCR should maintain objective and up-to-date information about the situation in the country of origin. Personnel on the ground should stay in close touch with refugees' thinking on the possibility of voluntary repatriation, and keep the refugees and concerned governments informed accordingly.

6. A distinction is to be made between "promotion" and "facilitation" of voluntary repatriation. Repatriation should only be promoted when it appears, objectively, that the refugees can return in safety and with dignity and the return has good prospects of being durable. UNHCR can promote voluntary repatriation without being in charge of organizing all aspects of the return movement. Frequently, members of a group will make their own arrangements for return, with or without assistance from UNHCR.

7. When UNHCR does not consider that, objectively, it is safe for most refugees to return, but even so refugees indicate a strong desire to return voluntarily and/or have begun to do so on their own initiative, UNHCR must be careful NOT to promote the repatriation, but may take some steps to facilitate it. UNHCR must make clear to the authorities and the refugees that support for such repatriation is based on respect for the refugees' free decision to repatriate and cannot be interpreted as an indication of adequate security.

8. Facilitating repatriation can, depending on the circumstances, include providing information to the refugees, advising on the limits of UNHCR protection and material assistance during and after their return, negotiating amnesties, establishing a presence in the country of origin and monitoring their treatment. The issue of material assistance requires careful handling, so that assistance is not interpreted as a pull factor nor as promotion of repatriation by UNHCR.

9. Where there is a mass spontaneous repatriation in conditions where UNHCR does not consider that, objectively, it is safe for most refugees to return, and in emergency conditions, Headquarter's advice should be sought to define UNHCR's role in such circumstances.

Conditions for a voluntary repatriation

10. In an organized voluntary repatriation, there must be:

- i. safeguards as to the voluntary nature of the return;
- ii. safeguards as to treatment upon return; and
- iii. continued asylum for those who do not repatriate and remain refugees.

Voluntary nature of the return

11. Ensuring the voluntary nature of the return includes ensuring

- i. the decision to repatriate is made freely;
 - ii. the refugees are making an informed decision based on an accurate country profile; and
 - iii. the decision is made expressly and individually (women on equal footing with men).
12. Voluntariness must be viewed in relation both to conditions in the country of origin (calling for an informed decision) and the situation in the country of asylum (permitting a free choice). Voluntariness means there should be no duress, compulsion or undue pressure on the refugee to repatriate. The decision is based on accurate, objective information.
13. A field office should analyse both factors, relying for the first, to a large extent, on direct interviews with all segments of the refugee community, including women. Consider refugee attitudes both towards changed circumstances in their home country and towards the situation in the country of asylum.
14. Voluntariness also means that the refugees should not be prevented from returning. In certain situations, economic and political interests in the country of asylum may lead to interest groups trying to prevent repatriation.
15. Whatever the nature of the repatriation, the refugees should be kept fully informed of the situation in the country of origin in order to guarantee the voluntary nature of the return. Though refugees are often already well informed, it may be necessary to provide additional information on the situation in their home country.
16. Information should be available about their planned reception and prospects for reintegration into their community. They will want to know if they have the right to repossess their houses and land, what the type and amount of material support they will initially receive, what they can take with them, etc.
17. Many of their questions may be best answered by:
- i. arranging for refugee representatives (including women) to make a visit to the home area to see the situation at first hand, if this is possible (go and see visits);
 - ii. assisting with the exchange of letters;
 - iii. enabling communication by radio with relatives in the country of origin;
 - iv. displays of information about home conditions; and
 - v. formal or informal discussions with recent visitors to the area of return, or through visits to the refugee camps of returnees or country of origin local authorities.
18. Whatever the method, care must be taken to ensure that the refugees are given as fair (and objective) a picture as possible of conditions in their home area.
19. The refugees must freely express their intent to repatriate. They may be unused to taking individual or family decisions of this nature, but programmes must be structured so that their rights in this regard are safeguarded.
20. In instances of organized return, the use of a voluntary repatriation form (VRF) is recommended (see Annex 1). Where there is any risk of coercion, either from outside or by factions among the refugees, the form should be signed in private in front of a UNHCR officer or other neutral witness. He or she may need to interview the refugees to ensure that their decision is truly voluntary. Where circumstances allow, more informal confirmation of voluntariness than these may be used and simple lists of names may suffice. In cases of massive spontaneous return, completion of a voluntary repatriation form will not be realistic and UNHCR must position officers along the routes of return to monitor, interview and intervene where necessary to determine if instances of coercion are taking place.

Treatment on return

21. The durability of voluntary repatriation depends, to a large extent, on the protection given to returnees during their reintegration into their home country.

22. The state of origin bears responsibility for the protection of returnees, its nationals. However, UNHCR involvement with returnees is justified by virtue of its protection role on behalf of refugees and the Office's statutory responsibility to seek voluntary repatriation as a durable solution for refugees.

23. UNHCR cannot guarantee safe treatment of the returnees, although they will often request such assurances. UNHCR's involvement with returnees is set out in more detail in the UNHCR handbook, the Voluntary Repatriation Handbook, which includes information on amnesties and monitoring.

Amnesties, assurances, guarantees

24. In any voluntary repatriation, appropriate legal safeguards are essential. UNHCR recommends that, in addition to conditions set out in a repatriation agreement, governments independently promulgate amnesties or legal guarantees for returnees. Such declarations should include the right to return, freedom of residence, and the provision of an amnesty. As a minimum, they should stipulate that returnees not be subjected to any punitive or discriminatory action on account of their having fled their country.

25. If the government consults UNHCR when drawing up an amnesty, it is particularly important to propose that the amnesty should be both:

- i. A group amnesty: The amnesty should be extended on a group basis, rather than requiring individual determination.
- ii. A blanket amnesty: The amnesty should whenever possible be a blanket one, not distinguishing between

different types of prior 'crimes'.

Such distinctions can create major problems, for example in a situation where a clear differentiation between political and criminal offenses may not be possible. Unless the amnesty is a blanket one, repatriates may not know if they are covered until they return, which may be too late. If a complete blanket amnesty is not possible, then a time limitation on the amnesty (offenses committed before or after or between given dates) should be the aim.

Monitoring

26. UNHCR must have direct and unhindered access to returnees to monitor their safety and reintegration conditions. This should include access to prisons or detention centres (liaison with ICRC and UN High Commissioner for Human Rights will be important in this regard as well as information-sharing with other NGOs working with returnees).

27. If returnees are at risk due to inadequate state protection, UNHCR should intervene on their behalf as appropriate, for example by remedial action, or formal protest at local, national or even regional level, and ensure there is good reporting. In case national or regional authorities systematically refuse to enact remedial action, UNHCR may be forced to review its role in the repatriation process.

28. UNHCR's returnee monitoring role alone will never provide a mechanism for ensuring the safety of returnees and respect for international human rights standards in the country of return. It can be a helpful influence to enhance respect for amnesties, guarantees, the rule of law and human rights but should never be seen as a substitute for state responsibility.

Continued asylum for those who remain refugees

29. Any voluntary repatriation operation and/or agreement must insist that inter-

national protection for those who choose to stay longer in the country of asylum is ensured. Some refugees may continue to harbour a well-founded fear of persecution and therefore would not wish to repatriate. Others may delay their decision, or decide against repatriation, preferring to wait and see until more persons have returned successfully.

30. This may mean the continuation of any existing operation, but for a reduced number of beneficiaries. Any voluntary repatriation operation will have to be planned and conducted in the context of a broader comprehensive strategy for durable solutions. If refugees remaining in the country of asylum are unlikely to be willing to return home, based on their particular profile and their specific needs, local integration and resettlement may need to be considered as durable solutions

31. If there is a serious problem of coercion, or intimidation, it may be necessary to move those who decide not to repatriate to another location immediately after they have reached this decision. This, too, should be foreseen and covered in any voluntary repatriation agreement.

Other protection concerns

Groups with specific needs

32. Throughout all phases of the operation particular attention has to be paid to groups with specific needs such as unaccompanied and separated children, unaccompanied older persons, the disabled and chronically ill as well as the specific needs of unaccompanied women and single heads of households. In large-scale spontaneous repatriation movements, family members may become separated during the operation and it will be necessary to establish tracing services to reunite families. During registration the identity of groups with specific needs and follow-up mechanisms in the country of asylum or country of origin, should have been recorded.

33. Unaccompanied and separated children require specific arrangements for return (please refer to Action for the right of the Children -ARC). In addition, special travel arrangements might be required for pregnant women, chronically sick persons, etc.

Being prepared for spontaneous repatriation

34. Proactive steps to ensure preparedness for spontaneous repatriation include:

- i. Being well informed about the refugee caseload, in particular its origin, history, composition, reasons for flight, and its view of developments in the country of origin.
- ii. Liaising closely with the UNHCR office in the country of origin to determine whether internally displaced people are returning home or other developments which could lead to a return movement. Such return movements are often sparked by refugee fears that they could lose their land, property or jobs if they do not return.
- iii. Being in close touch with the prevailing concerns of the refugees.

Preparing for repatriation

35. The steps below should be considered in any kind of repatriation, including in emergency circumstances. The management principles described in chapters 1 to 9 should be referred to (e.g. planning, needs assessment and implementation) and reference should also be made to chapter 21 on supplies and transport.

36. If indicators for a spontaneous repatriation are present, contingency planning should take place, including identifying protection and material assistance needs in the country of origin and en route, and establishing a capacity for monitoring in areas of return including a direct UNHCR or operational partner presence.

Agreement between the parties

37. Whenever possible, a formal voluntary repatriation agreement should be concluded between the governments of the countries of asylum and origin and UNHCR in the form of a Tripartite Agreement. A tripartite commission should in any event be established as soon as possible when organized voluntary repatriation is foreseen. However, it is important that UNHCR does not enter into tripartite repatriation arrangements without due consultation with the refugees, and that their reoccupations are always kept foremost.

38. UNHCR's role in developing repatriation agreements is to:

- i. Work with the two governments to ensure that any such agreement respects the basic protection considerations already outlined.
- ii. Help provide material assistance, where necessary, to enable the agreement to be implemented.
- iii. Monitor the return programme, with particular attention to protection, and to ensure free and unhindered access will be given to returnees. UNHCR should also be present in the country of origin to monitor returnee reintegration.

39. The actual content and scope of the formal agreement will depend on the circumstances. An example can be found in Annex 5 in the Voluntary Repatriation: International Protection Handbook.

40. The question of whether those wishing to repatriate are in fact nationals of their claimed country of origin may arise. Responsibility for determining this rests with the government of the country of origin. However, if particular issues arise over nationality claims or problems related to statelessness that cannot be resolved at field level, contact HQ for advice on how to proceed.

Coordination

41. UNHCR is likely to be responsible for the practical coordination of an operation which by definition will involve more than one country.

42. Cross border communication and coordination between UNHCR offices on both sides of the border can make or break an operation. The underlying principle of cross border coordination should be that voluntary repatriation operations have to be determined by the conditions, absorption capacity and preparedness in the country of origin.

43. One UNHCR officer should be designated with overall responsibility for the repatriation operation in countries of asylum and origin, and for the actual movement, for example the Representative in the country of origin. The need for a coordinator is even greater when substantial repatriation will take place from more than one country

of asylum. The designation of a focal point officer at Headquarters is equally important.

Staff

44. Because of UNHCR's protection responsibilities, such operations are often staff-intensive in the field. UNHCR staff may be needed to:

- witness the refugees' voluntary declaration of a wish to repatriate;
- maintain a presence, sometimes a continuous one, in the settlements, along routes of return, at border crossing points and in the transit and arrival centres;
- accompany the returnees during the journey;
- monitor treatment of the returnees on return; and
- mount those parts of the logistical operation not contracted out to operational partners and monitor those that are.

Estimation of numbers

45. An important element for planning is the number of refugees likely to repatriate, which will rarely be known accurately for a variety of reasons. Nevertheless, a best estimate will be required, and assumptions will need to be made. Plans must be flexible, taking into account the fact that a common pattern is a slow start as refugees wait to see how the initial movements go and how the first repatriates are received.

46. Information should be obtained on:

- i. The numbers of refugees intending to repatriate. Estimates should be obtained by random sampling of intentions, discussions with refugee elders, leaders, women, teachers and others in touch with the community and who are aware of likely intentions. Assumptions can also be drawn from observing current spontaneous return and identifying obstacles being faced by the returnees. A survey related to spontaneous return must be prepared with refugees as questions often arise concerning issues of forced return or false expectations.
- ii. The number of refugees for whom repatriation is unlikely to be an option at this stage.
- iii. Current location and numbers of refugees in the country of asylum.
- iv. Province and district of origin (intended destination) in the country of origin. Determination of priority provinces and districts of return will be based on the number of potential returnees.
- v. Lists of those with special needs.

47. Information for a repatriation operation, including iii – v above, should be processed using *proGres* (UNHCR standard registration software). *ProGres* is a holistic registration and case management tool which can be used during an emergency phase to record personal bio-data, to capture individual photos, and to create beneficiary lists (see chapter 11 on registration and population estimation).

Likely routes of return

48. Identify principal routes of return from the refugee camp to the destination in the country of origin based on the likely methods of return (roads, trains, airports, etc.). Identify border crossing points (primary, secondary, tertiary and minor foot paths). Consider which routes are safer, and where there may be danger of mines.

49. A range of maps with varying degrees of detail should be compiled with the support of the Field Information and Coordination Support Section in HQ as regards FICSS. Data should be imported into maps, charts and graphs. Use standard names and spelling for all locations since in many cases these may have changed.

Mass information campaign

50. In addition to ensuring the refugees have access to accurate information on conditions in the country of origin, they should also have direct access to information about the voluntary repatriation operation itself. Posters, leaflets, verbal presentations, radio and TV programmes, etc. in the refugees' language(s) should be used to explain as thoroughly as possible the envisaged voluntary repatriation operation. A simple leaflet, setting out the formalities to expect on arrival and arrangements made, can do much to help the repatriates and facilitate the reception process. It is important that at each stage of this information campaign care is taken to ensure it is as objective as possible and that no false expectations are raised. Do not hesitate to tell a refugee that the answer to some questions about specific conditions in the country of origin are not known. It should also be made clear to the refugees that on return he or she is outside the scope of UNHCR's protection responsibilities and once more subject to national laws.

Departure

51. Registration: Annex 1 contains a sample registration form – the Voluntary Repa-

triation Form (VRF), including a declaration of intent to repatriate. Where *ProGres* for the computerization of the registration data has been used, pre-completed VRF forms can be produced. These computer printed forms contain the required data on those individuals and families wishing to repatriate and the print-outs can be signed by those concerned.

52. Deregistration: Upon departure to their country of origin, repatriates have to be de-registered from any camp or assistance related records to ensure a proper scaling down and adjustment of assistance in the country of asylum.

53. Assembly prior to departure: Unless repatriation can take place directly from the settlements, special arrangements will be required for transit centres prior to the actual move, including transport, accommodation, food and basic health care as well as the orderly completion of the necessary administrative formalities. In some circumstances, registration may conveniently take place at the transit centres.

54. If repatriation takes place by means of organized transport, computerized passenger manifests, allocating passengers to convoys, could be prepared using the *ProGres* repatriation module. This will also allow the system to deregister refugees who are repatriating and exclude them from assistance in the camps.

On route

Organized repatriations

55. Identify sources of emergency assistance already available along the routes of return (medical facilities and potable water sources). Where sufficient assistance is not already available there will be a need to establish temporary “way stations” for rest and overnight accommodation, food distribution (prepared food or cooking facilities), first aid stations, water points, etc. The form and degree of assistance required will, in part, depend on the means

of transportation used by the returnees.

Other issues for consideration include availability of fuel and facilities for vehicle repair.

56. A considerable UNHCR presence will be required to monitor and verify the voluntary nature of return, to assess needs and to coordinate with offices in the country of origin and asylum. They should provide up to date information on numbers, needs and likely routes to be used.

Mass spontaneous repatriations

57. Where UNHCR is providing assistance in mass spontaneous repatriation, the same issues need to be considered as above. However, providing the assistance to a large unorganized mobile population will present challenges, and there will be additional protection concerns. The following steps should be taken:

General arrangements

- Establish or strengthen positions on the routes (way stations) for the provision of protection and assistance for the mobile population. Factors determining location of way stations include, availability of water and mode of transportation of the refugees. If the refugees are traveling mainly on foot, the distance between the way stations en route should be closer to one another than if the refugees are traveling mainly in vehicles.
- Establish a visible UNHCR presence at way-stations using flags, UNHCR stickers and other visibility material. Ensure that UNHCR staff can be clearly identified, particularly those in mobile teams.
- Designate which UNHCR office will have responsibility for which sections of the route.
- Make arrangements to support UNHCR staff living temporarily at way stations by providing tents or

other accommodation, drinking water, cooked meals, etc.

- Establish mobile assistance along the routes, between way stations.
- Install voice and data telecommunication at UNHCR temporary offices along the route.
- Equip all UNHCR vehicles with communication equipment.
- Arrange for a common radio channel through which all organizations involved can communicate.
- Put one experienced radio operator and/or technician in charge of coordinating the telecommunications along the whole route.
- Have debriefing meetings in the evening and allocate tasks for the following day;
- Introduce a single common numbering system for all vehicles.
- Communicate the daily movement plan through staff meetings, bulletin boards and daily sitreps.
- Provide information to the refugees on the location of way stations, etc. through the placement of signs along the route in languages that the refugees understand, through announcements on local radio stations and announcements using megaphones.
- Make preparations for reception in the country of origin – at the border transit centres, and in likely districts of return, e.g. prepare the local population, as well as local government, and negotiate reception and treatment at the border.
- Establish or strengthen a presence in the country of origin to facilitate integration and monitor treatment of returnees.
- Fill water tanks by pumping from local sources or tankering, ensuring adequate treatment of the water.
- Preposition sufficient quantities of water treatment chemicals at way stations and/or water collection points.
- Establish mobile water maintenance teams.
- Arrange for water tankering and refilling of water tanks at night if necessary.
- Fit water tankers with distribution taps for mobile water distribution.
- Provide refugees with small jerrycans (2-5 liters) which can be carried easily.
- Demarcate defecation areas (or trench or other latrines) at way stations, designate people to encourage and control their use.
- Identify teams for clean-up of defecation (or latrine) areas, during their use and to restore the area following the end of the population movement.
- Preposition lime for clean-up of defecation areas.
- Reinforce existing hospitals and health centres which are on the routes with staff and supplies. Establish health facilities at way stations and mobile health teams in between the way stations. Ensure that there are adequate supplies of Oral Rehydration Salts with health centres and mobile health teams.
- Try to prevent refugees concentrating in one area to avoid transmission of epidemics.
- Preposition high energy biscuits or other convenient food (preferably types requiring little or no cooking) and distribute them at way stations.
- Position staff with responsibility for unaccompanied minors at all way stations.
- Establish mobile teams to identify and collect unaccompanied minors.

Protection and material assistance

- Set up temporary water tanks with tapstands at way stations (e.g. using bladder tanks).

- Ensure that staff responsible for the care of unaccompanied minors are highly visible.
- Clearly define which types of people are to be considered “vulnerable” for the purposes of the population movement and ensure that all the organizations involved are using the same criteria for identification and care.
- Arrange separate transport to collect vulnerable persons, and their families.

Travel formalities

58. Immigration formalities: Every effort must be made to avoid the need for individual or family clearance to repatriate by the country of origin before movement. Not only would this create major practical problems and delays, it would also be contrary to the spirit of any properly comprehensive general amnesty. If individual travel documentation is required at all, the registration form should suffice.

59. Customs formalities: Customs formalities are generally waived or simplified in repatriation operations but this should be checked well in advance. Special arrangements may be needed where the refugees wish to repatriate with personal possessions such as vehicles or livestock.

60. Health formalities: Health requirements (vaccination certificates, etc.) should not exceed those required for normal travelers. Extra vaccinations, e.g. cholera, typhoid, are sometimes requested on the grounds that the refugees would pose special health hazards. Where vaccinations are required, WHO’s advice should be sought and if necessary they can be conveniently recorded on the registration form if the refugees are not already in possession of individual vaccination cards.

On arrival in country of origin

61. The principle of return in safety and dignity does not cease to apply once the

return movement is completed, but applies and should be monitored until such time as the situation in the country of origin can be considered stable, national protection is again available and the returnees are reintegrated into their community.

Registration on arrival in Country of Origin

62. In certain situations, in particular in an emergency EVACUATION, it may be the case that no repatriation registration was undertaken in the country of asylum. In this case a system should be set up to register the returnee population to facilitate UNHCR access to all returnees in the different areas of return. In some circumstances, a returnee card may be appropriate.

Monitoring and UNHCR presence

63. A UNHCR presence is vital for returnee monitoring. The presence of other appropriate organizations, and liaison with them, is also important. The purpose of monitoring is to assess whether national protection has been effectively restored and extended to all returnees. The basic principle is non-discrimination – that returnees are treated the same as the resident population and are not targeted or discriminated against in any way. Monitoring should cover general conditions (human rights violations, and security, food security, access to basic facilities and property, freedom of movement, honouring of any guarantees), as well as random individual monitoring.

Reception by resident population

64. Where the return is spontaneous there may be less time to make preparations in the country of origin. Steps should be taken as soon as possible to prepare the resident local population for the arrival of the returnees to promote acceptance and integration if necessary.

Material assistance

65. Material assistance and protection are interlinked and should usually be reinforcing. The provision of material assistance to returnees enhances the possibilities to monitor this population and is important in making return a lasting solution. Where assistance is given without discrimination on a community basis it can also help with acceptance of the returnees and integration. The question of the nature and degree of assistance programmes in the country of origin, as well as the length of time UNHCR should remain involved in the country of origin, are covered in more detail in the references listed below.

Access to land and property

66. Property is a key resource for returning refugees – either in terms of access to accommodation and return to one’s home, or as a means of livelihood. Resolving this can be very complex, particularly in relation to women’s rights, but must be addressed if the repatriation is to be successful and durable. UNHCR can play a role through negotiating with the authorities to protect the legitimate rights of returnees.

Landmines (Please refer to chapter 26 on staff safety for safety advice on mines and ExCom Conclusion 74 (XLV) 1994 .)

67. The presence of landmines on main routes of return and in returnee settlement areas poses tremendous danger for repatriating refugees and is therefore a major protection concern to UNHCR. The need for return “in safety and dignity” means that UNHCR cannot promote or facilitate the voluntary repatriation of refugees in patently dangerous situations with the risk of injury or death.

68. Within the UN system, issues relating to mine clearance are primarily the responsibility of the Department of Peace Keeping Operations (DPKO). Where necessary UNHCR may help fund minefield

surveys and demarcation, but involvement in actual mine clearance is exceptional and requires approval from Headquarters. The focus is therefore on less costly measures that lead to immediate risk reduction for the refugees like mine awareness campaigns. The danger of mines should be considered from the earliest stages of planning a repatriation.

69. The following activities should be considered:

Identification of return routes and potentially dangerous areas of return and landmine survey: UNHCR should obtain reliable information on areas seriously affected by the presence of landmines and discourage refugees from traveling to or through such areas. While a landmine survey is a national responsibility, UNHCR may also be able to contribute information obtained through its presence in the country of origin as well as through interviews with refugees in the country of asylum. DPKO have a database on mines which includes country specific information on estimated numbers and types, and progress in clearance.

Repatriation method: The presence of mines may have an impact on the proposed repatriation method – for example it may be necessary to encourage refugees to repatriate by means of UNHCR organized transport rather than returning spontaneously.

Mine awareness campaign: If landmines are a factor, then a mine awareness campaign should be part of the mass information campaign prior to departure in the country of asylum, and continue in the country of origin. Ensure that the campaign reaches all sectors of the population – both men and women should be involved with the planning and training activities of the awareness campaign. The campaign must be sensitive to levels of literacy, roles in society, and culture. It should cover: existence, appearance and

danger of landmines, how to avoid injury, safe rescue procedures, and recognizing warning signs.

Demarcation (marking mined areas) and mine clearance: UNHCR should ensure that returnee areas and routes of return are included as priorities in national demining and demarcation plans. Returnees and local population must be taught about the demarcation signs used.

Annex 2: Types of transport

General considerations

Below are some advantages and disadvantages of the common means of transport. Whichever form of transport is used, the plan should also take into consideration:

1. Food, accommodation and minimum emergency health care during the journey. Where distances are short, it is recommended that only material assistance needed for the duration of the journey, plus, if essential, for the first few days after arrival, be distributed prior to departure. This will help reduce any incentive to “repatriate” several times.
2. Capacity to move all reasonable private possessions of the refugees, if at all possible at the same time as their owners. Remember that what refugees carry with them on return will be used to ensure more successful reinstallation and move more quickly towards self-sufficiency (i.e. roofing material, livestock, etc.).
3. Appropriate security and the maintenance of public order during all stages of the journey.
4. Arrangements for the safe transfer of the required documentation, passenger lists, registration forms, etc., and for keeping statistical records of the progress of the operation.
5. Escort or monitoring of the actual repatriation by or on behalf of UNHCR. At least for the first movements, a UNHCR staff member should accompany the returnees. Ensure voluntariness even during the movement stage.

Annexes

Annex 1: Preface and extract from “The Checklist for the Emergency Administrator”

Annex 2: Suggested field filing system

Introduction

1. The purpose of this chapter is to provide general guidance on UNHCR's basic administrative procedures and actions in an emergency. Nothing in this chapter should be read as altering any existing rules, regulations and instructions, in particular the UNHCR Manual. The latest edition of The Checklist for the Emergency Administrator (hereinafter referred to as the Checklist) is an essential reference for administration in emergencies. The Checklist comes in 3 parts:

- i. The actual Checklist (a few pages). This is reproduced as Annex 1.
- ii. Annexes to the Checklist (on the CD Rom) which are primarily samples of the most frequently used administrative forms and extracts from the UNHCR Manual.
- iii. A CD Rom containing many of the forms.

Throughout this chapter references are given to the relevant item in the Checklist.

2. The chapter considers particularly the opening of a new office in an emergency, but may also be helpful when expanding an existing office or establishing Sub or Field Offices.

3. The status of an established UNHCR office is governed by an agreement between the host government and UNHCR, called a Cooperation Agreement, also referred to as a "Branch Office Agreement" or an "Accord de Siège". (See Checklist Section on Premises). Until such an agreement is concluded, UNHCR will be covered by the United Nations Development Programme's (UNDP) agreement with the host government. In addition, the Convention on the Privileges and Immunities of the United Nations, 1946,¹ is applicable to UNHCR and covers such matters as the inviolability of United Na-

tions premises, the right to operate foreign currency accounts, exemption from direct taxes and customs duties on articles for official use, and facilities and immunities for communications. Specific considerations in respect of the emergency operation, e.g. regarding the handling of relief supplies, would be set out in the exchange of communications concerning the government's request for material assistance and in the project agreement (see Chapter 8 on Implementing Arrangements).

Emergency staffing

(See the Checklist section on Personnel, Staff Conditions & Security. See also the Staff Rules and the Staff Administration and Management Manual, also the In-Site database available on CD Rom.)

Introduction

4. As soon as possible the Head of Office should communicate to Headquarters the projected staff requirements at both general service and professional levels with the necessary detail to enable Headquarters to review these in accordance with established personnel procedures and to approve the staffing table for the emergency. Emergency staffing resources should be used for the initial emergency period only. In the initial period, prior to the creation of posts, national staff could be recruited and paid for under Temporary Assistance.

5. There should be no delay in committing necessary personnel. However, solely adding personnel will not meet the organizational needs of an emergency: the operations plan and definition of responsibilities must determine personnel needs, not vice versa. Experience shows that for a given operation, smaller teams with clear allocation of responsibilities are usually more successful than larger teams whose members have less clearly defined roles.

Additional staff, who are unclear as to their role, will add to the management burden in an emergency

¹ Contained in UNHCR, *Refworld CD-ROM*.

Staffing must be flexible. Numbers are likely to vary over time.

Recruitment

6. It is important that the different advantages of national (also referred to as local) and international staff are understood, and that these different strengths are properly incorporated into a staffing plan. National staff members understand the local situation and are sensitive to issues that often escape the notice of the international staff member. They often enjoy a wide range of contacts that enable them to “get things done”. Very significantly, national staff may speak the refugees’ language.

7. Correspondingly, international staff members bring to the operation impartiality and an embodiment of the international character of UNHCR, which is essential. They will also have experience from elsewhere to contribute to the management of the emergency.

8. Headquarters is responsible for international staff identification, recruitment and deployment. The need for international staff will depend on the scale of the emergency and implementing arrangements.

UNHCR has developed a number of standby arrangements whereby suitable international staff can be deployed rapidly to an emergency operation.

9. The following table shows staff functions which may be needed in a large emergency.

Type of function
Overall management and leadership
Core UNHCR functions in an Emergency Team: Field, Protection, Programme
Administrative and finance functions for an Emergency Team, to set up new offices and train staff
Community services functions
Supply and transport functions
Technical functions – technical coordinators (e.g. for health, water, nutrition); and – other technical support (e.g. health assessment, epidemic preparedness and response, health monitoring systems, engineering (physical planning, water, sanitation, roads)
Support functions (e.g. base camp management, telecommunications and staff safety)

10. The need for at least the following international staff (comprising an emergency team with an appropriate gender balance) should therefore be considered in a large scale emergency.

- Emergency Team Leader (with one of the senior officers also possibly acting as Deputy to Team Leader)
- International Secretary or Assistant for the Team Leader
- Senior Protection Officer
- Protection Officer(s)
- Senior Programme Officer
- Programme Officer(s)
- Sector Coordinators, e.g. community services, water, health, nutrition
- Field Officers deployed at the refugee sites
- Senior Administrative Officer
- Finance Officer/Human Resources Officer
- Field Safety Adviser
- Public Information Officer
- Logistics Officer
- Telecoms Officer

11. The emergency team could be composed of staff deployed from emergency standby arrangements only, or a mix of the latter plus UNHCR staff already posted to the area. Emergency standby and staffing arrangements include an internal roster of UNHCR staff and emergency standby arrangements with other organizations. Details of these arrangements can be found in the Catalogue of Emergency Response Resources, Section A.

12. For all staff, prior experience of an emergency operation is of course, a great advantage.

The overriding staffing priority is to fill key managerial posts with experienced UNHCR staff of the right calibre.

13. In a country where a major emergency is added to a previous small-scale programme it may be necessary to replace the existing Head of Office with a more experienced Head of Office at least for the duration of the emergency.

14. Administrative staff is another priority. An experienced administrative assistant will be an essential member of the team if a new office is being opened. In large emergencies experienced Finance and Human Resources Officers are likely to be necessary. Without persons with these skills, other staff will have to devote a disproportionate amount of time to UNHCR internal administration. National administrative staff must be identified and trained, but this in itself requires experienced supervision.

15. Each refugee emergency will require a certain number of specialist skills even at the assessment and initial phases of the emergency. Where these are not available in-country, the assistance of Headquarters for recruitment of specialists through standby arrangements should be sought without delay. See Section A, Catalogue of Emergency Response Resources for more details of these standby arrangements.

16. Informal volunteers, both nationals and members of the diplomatic and expatriate communities may come forward to help. The value of these outside volunteers will vary considerably with the situation. It will be important to assess the skills of the volunteers, the time they can devote and the availability of management personnel needed to coordinate and support them.

Lack of proper supervisory support may lead to the volunteer taxing already over-extended staff as much as, or more than, the value added.

Reporting lines

17. In situations where an emergency team is deployed to an area of the country where there is no UNHCR office, the emergency Team Leader will normally report to the UNHCR Representative in that country or the Regional Representative or Special Envoy as appropriate in the individual circumstances.

18. When an emergency team is deployed into an area where a UNHCR office already exists and has responsibility for the operation, then the emergency team should integrate into the staffing structure of the existing office. The decision as to who should head the operation, the existing Head of Office or the Emergency Team Leader, will depend on the circumstances and the relative experience and seniority of the individuals. The decision as to who will head the operation must be clearly communicated to all staff at the outset to avoid any ambiguity in responsibilities and reporting lines.

Management

19. Sound human resources management, supervision and leadership are very important to the success of an emergency operation, but can easily be overlooked. The initial motivation of those involved is a major asset, but for persons at levels that do not allow an overview of the operation,

this can be replaced by disappointment and frustration if supervisors are too busy to plan, organize, direct, control and continue to motivate their staff.

20. Responsibilities, roles and tasks must be clearly defined and understood.

Job descriptions are the most common management tool for defining individual responsibilities, even if the imperatives of an emergency mean their frequent revision. They are important for UNHCR staff, and even more so for seconded staff (such as United Nations Volunteers (UNVs), consultants and staff deployed through the emergency standby arrangements), and informal volunteers. Responsibility should be delegated to the lowest possible level, and with it must go the necessary authority. Responsibility without authority is useless.

21. Staff meetings should be convened regularly from the start. Team welfare will have an important bearing on the success of the emergency operation.

Everyone must be made to feel part of the UNHCR team. This includes consultants, seconded staff, and volunteers.

22. Very long hours will often be necessary, but supervisors must ensure that staff have time off, away from the refugee site, and do not get so tired that their efficiency and the professionalism of their approach suffers.

23. All field staff have a particular responsibility to safeguard their own health, but also have a role to play in ensuring that their colleagues remain in good mental and physical health (see chapter 25 on coping with stress). Early corrective action can avert the need to hospitalize or evacuate key staff.

24. In an emergency, there may be many occasions when staff can clearly see that they could alleviate suffering directly by

devoting time in helping individual refugees or families in distress. To seek to do so is very understandable. However, it can lead to a personal emotional involvement at the expense of the staff member's wider responsibilities towards the refugees as a whole, and to resentment among other refugees. Direct responsibility for individual care is usually best assured by the refugee community. For all staff, compassion must be tempered by a professional approach. Guidance by supervisors is often needed on this point.

25. Particular attention must be paid to proper supervision and encouragement of newly recruited national staff. Often the Head of Office and other international staff are extremely busy, out at meetings or in the field, and the other staff, who may know little about UNHCR and less about the operation, lack guidance and a sense of involvement. Some of the general information in the emergency office kit may be useful for briefing newly recruited national staff. In all cases, the new staff should receive a briefing from their direct supervisor covering, at a minimum, general information on the operation and the role of the new staff member.

Human resource management

26. UNDP may be able to help in determining conditions of service and even in identifying national field staff.

27. Careful attention must be paid to the administration of out-posted field staff. A convenient way of administering Field Officers, at least initially, is to ensure that the Travel Authorization (PT8) issued authorizing the mission to the country of operation also covers internal travel and daily subsistence allowance (DSA). If the latter is not covered, an addendum to the original PT8 is issued. Normally in emergency situations, and to avoid staff carrying too much cash, a DSA advance is given on a monthly basis. This advance is charged to the suspense account code as indicated

on the UNHCR account codes listing (VF 369 in FMIS and 240020 in MSRP) and recorded on the reverse side of the original PT8. Upon completion of the mission, the office settling the travel claim, must ensure that the travel advances are deducted from the entitlements.

28. Particular care must also be taken to ensure the proper administration of out-posted national staff, for example, Field Officers' drivers. It should be noted here that while Heads of Office can authorize out-posted staff to drive official vehicles on official travel, as in an emergency this is likely to be necessary, every effort should be made to provide Field Officers with drivers from the start. They can be of great help to Field Officers in a variety of ways.

29. All out-posted national staff must have contracts, understand their terms of employment and benefits, including the cost and benefits of the UN health insurance scheme, receive their salary regularly, work reasonable hours and take leave due.

All staff should have job descriptions and understand them.

Obvious as these requirements are, they can be difficult to meet in an emergency. There may be important extra demands on UNHCR drivers, both beyond simple driving and also as a result of their working for itinerant Field Officers and thus spending considerable time away from home. These factors must be taken into account.

Staff visibility

30. A means for visual identification of UNHCR staff may be necessary, particularly outside the capital. Visibility materials, available from Headquarters, include flags, stickers (including magnetic stickers), vests, armbands, T-shirts and caps (see the Catalogue of Emergency Response Resources Section B).

31. Consideration should also be given to adopting a UNHCR identity card with a visible photograph that can be worn as a pocket badge. Arrangements should be made as soon as possible for UNHCR staff to receive diplomatic identity cards issued by the government. Pending that, an official attestation in the local language could probably be quickly obtained for each out-posted Field Officer from UNHCR's government counterpart and might be very useful.

Staff accommodation

32. At the start of an emergency, international staff will be on mission status and will generally be accommodated in hotels. Should the daily subsistence allowance (DSA) not cover the basic cost of adequate hotel accommodation, Headquarters should be informed at once and all hotel receipts retained. Conversely, DSA is reduced if official accommodation and/or meals are provided. If it is clear that special arrangements will be required for personal accommodation for staff who are assigned to that duty station, Headquarters should be informed, with details of local UN practice.

33. In extreme hardship areas, where there is no suitable staff or office accommodation, a standard staff and office accommodation package is available. This consists of prefabricated units which are stockpiled and which can be airlifted to the operation. Further information is provided in the Catalogue of Emergency Response Resources (Section C).

34. Standard travel kits and field kits are also available from the emergency stockpile, and details of their contents are provided in the Catalogue of Emergency Response Resources (Section C). The kits have been developed to provide staff with some basic personal items likely to be of use in the first days at such places, pending more appropriate local arrangements. The kits will normally only be issued to

staff proceeding to isolated locations from or via Geneva, and when it is clear that there may not be time to obtain what is actually needed on arrival in the country of operation. If UNHCR is already represented in that country, the Field Office should have a good idea of conditions to be expected and thus of what specific personal equipment may be needed, and this is probably best purchased locally.

35. Responsibility for the provision of the necessary personal items rests with staff members. Even when issued with kits, staff should check carefully what other items may be required; it is unlikely that a standard kit will meet all needs. Staff receiving kits will be required to account for them at the end of their mission, and will be expected to at least return the non-consumable items.

36. In difficult conditions it may be necessary to hire a base camp manager who will be responsible for organizing living arrangements for UNHCR staff. A description of the tasks of a base camp manager is provided in the Checklist for the Emergency Administrator.

Budget and finance

(See Annex 1: Checklist for the Emergency Administrator: Section on Finance, Equipment & Supplies)

Authority to incur expenditure

37. Currently UNHCR classifies expenditure into two types:

- i project expenditure; and
- ii administrative support expenditure.

This classification of expenditure may change in the future.

38. Authority to enter into obligations for project expenditure is given by a letter of instruction (LOI). Further details can be found in chapter 8 on implementing arrangements.

39. Authority to enter into obligations for administrative support expenditure is given by an Administrative Budget and Obligation Document (ABOD). This is issued by Headquarters and is addressed to Heads of Offices. It covers all non-staff costs including temporary assistance and overtime.

40. Authority for additional administrative support expenditure in an emergency is given to an existing Field Office by amending the existing ABOD. When an emergency occurs in a country where UNHCR is not already represented, an initial ABOD will be issued immediately. This can then be amended when more details of administrative requirements are known. For offices that are using the Financial Management Information System (FMIS), the Administrative Budget Control Sheet (ABCS) provides information on expenditures against funds allocated. For offices that use the Management Systems Renewal Project (MSRP), the ABOD Expenditure Report (HCR113) provides the same information.

Transfer of funds

41. It is essential to have funds immediately available. Funds will normally be made available by bank transfer. However, such transfers, especially to out-posted Field Office bank accounts, sometimes suffer undue delays because of complicated banking channels. It is very important to select a local bank with a direct international correspondent relationship, if possible with Citibank N.A. New York, Deutschebank GMBH, Standard Chartered Bank, or the UBS Bank in Switzerland. Further information can be provided by the Treasury Section at Headquarters.

42. At the start of an emergency it may be possible to hand carry a banker's cheque from Geneva to be credited directly to the Field Office bank account. If this is done, proper precautions must of course be taken to ensure the security of the cheque.

43. In very extreme cases, when no banking services are available, cash may be acquired locally (e.g. through local companies and traders) upon specific authorization from Treasury. Funds would be transferred to an account indicated by the trader after receipt of the cash by UNHCR. Cash may also be provided to Field Offices through professional courier services. Information about cash transfers, past, present and future, must be treated with absolute discretion.

44. Subsequently funds will be transferred by Treasury upon cash replenishment requests in the standard format shown in the box below. Care should be exercised that funds are called forward as close as possible to the date of their utilization to avoid unnecessary high bank balances over prolonged periods.

To: UNHCR Treasury (HQTY00)
From: Requesting Officer/Field Office Location
Subject: Cash Replenishment Request

Please effect an immediate transfer of funds based on the following information:

Balances on hand (all bank accounts and petty cash) at (dd/mm/yy): (provide details of amounts and currencies)

Total disbursement needs for the next x (maximum 4) weeks: (provide details of administrative and programme needs, amounts and currencies)

Replenishment amount requested: (indicate amount and currency)

Complete bank name and address, including UNHCR bank account number, and the Field Office's accounting system receiving bank code.

45. Disbursements for both administrative and project expenses are made in the Field either from a local UNHCR bank account or, pending the opening of such an account, through UNDP. In the latter case, UNHCR Headquarters will arrange with UNDP Headquarters for the local UNDP office to receive the necessary authority to incur expenditure on behalf of UNHCR. Settlement is made between UNHCR Headquarters and UNDP New York for these transactions. As a rule, disbursements exceeding the equivalent

of US\$100 should be made by cheque. Whenever local circumstances require regular cash payments in excess of this limit, Headquarters' approval must be obtained.

Bank accounts

46. All local UNHCR bank accounts are opened by Treasury upon recommendation from the Field Office. The choice of a bank will be determined by its reputation, ease of access, services offered and charges. Other UN agencies, diplomatic missions and NGOs should be consulted. The following information is required:

- i. full name of the bank;
- ii. address, phone, telex and fax numbers;
- iii. type and currency of account;
- iv. full details of the Bank's international correspondent bank, (including SWIFT code, ABA, IBAN, etc.);
- v. maximum amount of any one cheque;
- vi. suggested panel of bank signatories; and
- vii. Amount of initial transfer.

47. Treasury will designate the authorized bank signatories. Two joint signatories are normally required to operate UNHCR bank accounts. In exceptional circumstances, signature by one Officer may be authorized.

Particular care must be taken to ensure cheque book security.

Cheques must bear UNHCR in words, be consecutively numbered, verified on receipt, and kept in a safe by a staff member designated by the Head of Office. Cheques should always bear the name of the payee and should be crossed unless there is an overriding reason why this is not practicable. Under no circumstances should a bank signatory pre-sign either a blank cheque or one which is only partially completed.

48. Field Offices will normally maintain one non-resident local currency bank account; circumstances may however also require the opening of a non-resident US dollar account and perhaps even a resident local currency account. Where problems of exchange control regulations are encountered, the Treasury at Headquarters should be informed immediately. Field Offices should ensure that the most favourable conditions are obtained for the transfer and conversion of UNHCR funds.

Exchange rates

49. If there is a significant discrepancy, i.e. more than 3%, between the actual market rate and the prevailing UN rate of exchange, a request for a revision of the latter should be made. This request should be coordinated with UNDP and other UN organizations locally and addressed to UNDP New York. The communication should contain a summary of the fluctuations over the previous 60 days. If necessary, UNHCR Headquarters should be requested to intervene with UNDP New York.

Accounting procedures

50. UNHCR accounting procedures are in the process of being changed with the introduction of the Finance & Supply Chain modules of the Management Systems Renewal Project (MSRP) which is replacing the Financial Management Information System (FMIS). MSRP is now being used in more than 100 offices worldwide. It is expected that, apart from locations where Internet connections cannot support the system, almost all UNHCR Offices in the Field will be using the MSRP by the end of 2007. Whatever system is in use, a Field Office that operates its own bank account(s) must report to Headquarters monthly on all transactions for each account. The procedure is the same for both administrative and project expenditure. Most importantly, a properly supported payment voucher must be completed and

immediately entered into the electronic accounting system. In locations where neither FMIS nor MSRP have been installed, a manual payment voucher (F.10) should be completed and immediately entered on a bank journal (HCR/ADM/800) for each transaction. It is essential that the voucher quotes the authority for payment (LOI, ABOD, PT8 (Travel Authorization)). A "Mini Payment Voucher" book (F.11), designed especially for emergencies, may be used by out-posted Field Officers. An official UNHCR receipt voucher should be issued and entered on the bank journal for any receipts other than replenishments from Headquarters. Similarly, payments from petty cash have to be accounted for in the petty cash journal (HCR/ADM/800). It is imperative that all vouchers and journal entries list the correct account code, as indicated in the UNHCR account codes listing and on the PT8, or the project symbol marked on the LOI against which the transaction is to be debited/credited.

51. Whatever the pressures of the emergency, accounts must be kept up-to-date and the monthly closure done on time.

Experience has shown that failure to do so will not only delay the replenishment of the bank account but will also result in far more work than would originally have been required.

Non-expendable property and office supplies

(See Annex 1: Checklist for the Emergency Administrator: Section on Finance, Equipment & Supplies)

Non-expendable property

52. Authority to purchase office furniture and equipment is given in the ABOD. Field Offices may purchase locally or regionally if the cost of the item is less than 15% above that available through

the Supply Management Service at Headquarters.²

53. The purchase of computer equipment, vehicles, telecommunications equipment and security equipment should be coordinated with Headquarters in order to ensure conformity with the organization's specifications. Local purchase should be considered and if the cost is within the 15% limit referred to above, the Field Office should forward three pro forma invoices, together with the item's specifications, to the Supply Management Service at Headquarters for approval.

Asset management system

54. The asset management system is an electronic system to track and manage all non-consumable assets owned by UNHCR (with a lifespan of over a year), regardless of funding source or user (including for example all vehicles, telecommunications and computer equipment, furniture and office equipment, buildings such as clinics, office, hospitals, and water purification and construction equipment). The system should be installed into at least one computer at the country office level. A decision should be made at the beginning if the extent of the operation requires that the system be installed in other offices within the country. The office must also have the system user manuals, bar-code labels and data entry forms (obtained from the Asset Management Unit at Headquarters).

55. Whenever an asset is purchased, whether locally, regionally, through Headquarters, or by implementing partners with UNHCR funding, it must be bar-coded and recorded in the asset management system.

56. Where items are acquired from stockpiles maintained at Headquarters, such as

² *Costs of items available through Headquarters are quoted in UNHCR's Catalogue of Most Frequently Purchased Items, UNHCR, Geneva, (updated regularly) and in IAPSO's catalogue of Office Equipment, IAPSO (updated regularly).*

computer and telecommunications equipment, relevant data about the item will be sent to the Field on diskette so that the office can import the details into the asset management system.

57. Where an asset is re-deployed to another location, data about it should be sent on diskette to the receiving office for importation into the asset management system.

58. It is important that all assets are bar-coded and recorded in the asset management system from the beginning of the operation. Failure to do so will result in "lost" assets and in far more work than would originally have been required.

59. Offices maintaining their own asset management database should regularly send their databases to the country office for consolidation.

The consolidated database should be sent to Headquarters every three months.

Office supplies

60. An emergency office kit (see Catalogue of Emergency Response Resources, Section C) can be used to supply a new office with stationery and small office equipment. The stockpiled kits weigh approximately 120 kg and are packed in two cardboard boxes. Each kit is designed for an office with five international staff and 10 national staff.³

61. Office supplies, as well as printed stationery and forms, can be purchased locally, regionally, or if this is too expensive, ordered from Headquarters. Office supplies and printed forms listed in the UN catalogue may be ordered on a stationery request form (GEN-236/1) directly from Headquarters. The emergency kits are not intended for re-supply, even in emergencies.

³ *Further information is also contained in the Catalogue of Emergency Response Resources (Section C).*

62. Orders for items not listed in the UN catalogue⁴ and which are not locally available should be requested from Headquarters, giving all necessary details and specifications.

Office premises

(See Annex 1 Checklist: Section on Premises)

63. The order of priority for obtaining offices is:

- i. rent-free from the government;
- ii. in common UN premises;
- iii. government-provided offices against reimbursement by UNHCR; and
- iv. commercial rent.

64. Interim arrangements may be necessary, but the early establishment of the UNHCR presence in a convenient location will be of obvious importance to the success of the operation.

65. Office space per person should not exceed about 14m², but an approximate addition of 30% is needed to allow for a reception area, interviewing room, meeting room, and services area (filing, copier, etc.) as appropriate to the scale of the operation.

66. Considerations in selecting office premises include:

- location (distances from local authorities/ministries, implementing partners, bank, post office, airport, etc.);
- security (for authorized access to individual refugees and UNHCR staff, to prevent unauthorized access, and for the physical security of offices, files, etc.) and compliance with the Minimum Operating Security Standards (MOSS);
- parking facilities;

- utilities (electricity, water, heating, air-conditioning, wires for telephone, toilets, simple kitchen facilities, storage room, etc.);
- physical layout and orientation of the building: ensure that the building and grounds are suitable for radio and satcom antennas and that there is no interference from neighbouring installations e.g. pylons;
- provision for a large enough meeting ;
- space for UNHCR to discharge its coordination responsibilities through coordination meetings;
- room for expansion: in emergencies the numbers of staff can fluctuate considerably; and
- the condition of the office.

67. The use of residential accommodation (e.g. a villa) as an office may be an option.

68. Once office premises have been selected, the government, diplomatic community, other UN agencies and NGOs should be informed accordingly, and the relevant information provided to neighbouring UNHCR offices and to Headquarters.

Official transport

(See Annex 1 Checklist: Section on Communications & Transport. In addition, chapter 21 on supplies and transport deals with all transport issues, focusing on transport for operational needs).

Vehicles

69. It is essential for UNHCR staff to be mobile. Action to ensure enough of the right type of official vehicles will be a high priority. Consult the Supply Management Service at Headquarters regarding the purchase of vehicles (see chapter 21 on supplies and transport for more information about the purchase or acquisition of vehicles). Once the vehicle is sold or

⁴ *Office Supplies, Forms and Materials, UN, Geneva, 1990.*

passes from UNHCR's control (e.g. at the end of a lease agreement), ensure that any official UN or UNHCR logos and stickers are removed. Magnetic stickers (available from Headquarters) can be quickly attached and removed from vehicles and re-used.

70. Requests to Headquarters for vehicle purchase should give full details (make, type of body, number of doors, long or short wheelbase, left or right hand drive, petrol/diesel, special options: sand tires, extra fuel tanks, air-conditioning, heater, mine protection, anti-theft device, etc.). The duty-free on-the-road price and delivery time must be given if local purchase is requested.

71. In many countries duty-free fuel may be available for official UN vehicles. Details of procedures should be obtained from the government and other UN organizations. Follow them from the start; retroactive reimbursement is often impossible.

72. Vehicle daily log sheets should be introduced from the day the official vehicle becomes operational and these should be designed in such a way as to show the daily mileage of each vehicle and the purpose of each trip. The daily log should also include the names of the driver and of the passenger(s). Mileage should be regularly checked against the purchase of fuel for that vehicle.

73. It is important that vehicles are insured and registered upon arrival. In respect of each official vehicle assigned to a Field Office, adequate insurance covering third party risks should be arranged locally with a reputable insurance company.

Light aircraft

74. There may be situations when a light aircraft is the only way to ensure satisfactory communications between the various UNHCR locations. The need may be temporary, for example to expedite needs

assessment and the initial response, or longer-term when the existing communications infrastructure does not adequately cover the location of the refugees and the journey by road is long and uncertain. In some circumstances, security is also a consideration.

75. Immediate action to provide the necessary flights is essential. Initially, or where the need is short-term, this is likely to be by commercial charter unless the UN system already has a light aircraft and spare capacity. If locally based charter companies exist, seek impartial local advice on their reliability, obtain as many offers as possible and send these to Headquarters with a recommendation. Include details of passenger insurance coverage. This information should be complemented by an indication of the required weekly flight plan (e.g. per week: 3 return flights capital/location X; 1 return flight capital/location Y; 1 round trip flight capital/X/Y/capital), and the estimated cost for the necessary flights (total or per month).

76. Where local charter is not possible or a long-term need is foreseen, inform Headquarters with as much detail of the requirement as possible and ways it might be met (for example, of charter companies from neighbouring countries known to operate in the country of operation). Some government disaster corps and a number of NGOs operate light aircraft. Some are specialized in this field like Aviation Sans Frontieres (ASF), and the Missionary Aviation Fellowship (MAF). If there is already such an operation in the country their advice should be sought.

Office organization

(See Annex 1 Checklist: section on Filing & Documentation and Communications & Transport).

Filing and documentation

77. A simple office communication system should be put in place immediately.

This can be implemented by, for example, pigeon holes (ideally one for each staff-member and one for each collaborating organization), white-boards and notice-boards. This will help to ease communication problems in the confusing early days of an emergency.

78. A suitable filing system and registry controls should be set up immediately on the opening of a new office. Annex 2 gives some guidance as to what might be required and how filing could be organized.

79. A rubber stamp to show date of receipt, file, action officer and remarks will be very useful. The practice of putting a chronological number on every outgoing communication is strongly recommended and will be particularly helpful in the confused early days. Everything should have copies on the chronological file in addition to a subject file.

80. As a precautionary measure, offices should have a shredder to destroy any unwanted documents or correspondence. In some countries waste paper is sold and used in markets for packaging, so care should be taken that discarded UNHCR documents are not used in this manner.

Communications

81. Communications needs are discussed in the communications chapter. A simple check-list for a new office is given below; the order will not necessarily be the priority.

- Identify the need for a telecommunications network as soon as possible (radio, e-mail, satellite, etc.).
- Obtain necessary permission from the authorities to operate the equipment with the assistance of the RTO (Retail Tagging Organization) or HQ Telecoms if necessary.

- Obtain immediate access to a telephone and fax and tell Headquarters (and neighbouring UNHCR offices as appropriate) the numbers and where they are located.
- Set up controls and registers for incoming and outgoing communications from the start.
- Establish a pouch system between the offices within the country of operation and Headquarters.
- Consider communications needs in selecting office premises.
- Obtain a PO box number and tell Headquarters (and local authorities, etc.) the number.
- Once the UNHCR telecommunications network is installed, inform government, UNHCR Headquarters, neighbouring UNHCR offices, diplomatic corps and others, and ensure correct listing in national telephone directories, in the local UN and diplomatic lists, and in the UNHCR directory.

Annex 1: Checklist for the Emergency Administrator

(Note: This checklist is regularly updated, the latest version is dated November 2006)

PREFACE

This checklist is intended as a practical tool for UNHCR staff when responding to emergencies and assigned to duty stations where there is no established UNHCR presence, or where the existing office needs to be strengthened as a result of new events.

There are 3 components:

- The **Checklist** itself which lists most activities requiring consideration when establishing a Branch, Sub or Field Office. Not all items will be relevant. The Administrative Officer together with the Head of Office will need to determine what action is to be taken. The list is not presented in an order of priority and it is therefore important to set your own priorities depending on the local circumstances. The list does not cover administrative procedures and actions required for the ongoing needs of the office, but concentrates on those related specifically to the establishment of an office. Each item is preceded by a box which you may tick off as action is taken.
- **Annexes**, which are primarily extracts from existing documentation. These have been included for ease of reference and are not substitutes for existing manuals and instructions of which the most important is the UNHCR Manual to which frequent reference should be made. Not all relevant UNHCR forms are included, as these are available in the Emergency Office Kit, or directly on request from Headquarters.
- A **computer disc (CD)** which contains the documents mentioned in the table of contents and formats for all forms or documents which are indicated by an (*) in the Checklist. These forms or documents can be copied and amended to suit local needs. (It is recommended that the original format is not amended directly.)

The importance of setting up effective administrative procedures from the outset cannot be over-stressed. They will have important consequences for effective administration throughout the operation.

ESTABLISHING AN OFFICE CHECK-LIST FOR THE EMERGENCY ADMINISTRATOR

	ACTION	ANNEXES
PREMISES		
<input type="checkbox"/>	1. Establish a UNHCR Cooperation Agreement if not already in place or consider its amendment if one already exists but circumstances have changed.	a. Model Agreement(*) b. Example Agreement c. UN Convention on Privileges & Immunities
<input type="checkbox"/>	2. Identify need for Sub/Field Office Operations	a. UNHCR Manual Chapter 2. Section 7.1-7.5.12-Field Office
<input type="checkbox"/>	3. Establishing an Office, Procedure. Identify Office Premises, negotiate lease and seek approval from Geneva. Closing an office, Procedure.	a. UNHCR Manual, Chapter 6 Section 9.1- 4 b. Standard lease (*) c. Note on Selecting Premises
<input type="checkbox"/>	4. Consider the use of UNHCR stickers and UN flags, posters and visibility material . Request more from HQ (PI section) if necessary.	a. UNHCR Logo/Flag, revision & guidelines, IOM/59/05-FOM/58/05, October 2005 b. List of stockpiled visibility material
<input type="checkbox"/>	5. Consider " Base Camp " requirements and need for Base Camp Manager, in situations where this is applicable.	a. Base camp manager profile
COMMUNICATIONS AND TRANSPORT		
<input type="checkbox"/>	6. Determine immediate needs for and set up communications : Telephone, E-Mail, fax, telex and/or radio and pouch. Complete communications questionnaire and send to HQs Attn. Telecommunications Unit.	a. Communications Info Kit including Communications Questionnaire b. Telecommunications inventory forms (*) c. Pouch Service Instructions
<input type="checkbox"/>	7. Establish telecommunications procedures . Train staff and advise of procedures.	a. IOM/97-FOM102/97-December 1997-Procedures for Requesting EDP and Telecom Equipment. - IOM/15-FOM/14/2004-March 2004, 2005 Budgeting Guidelines for IT & Telecom, Computer, Equipment. - Sitor/Pactor/Manual b. Voice procedures c. Codan user instructions (*) d. Handover letter for handsets(*) e. Handset user instructions (*) f. Radio room discipline (*) g. Communications procedures
<input type="checkbox"/>	8. Establish log for recording long distance phone calls giving particular attention to private phone calls.	a. FOM/008/91, Telephone communications and the keeping of a log/private use/official b. FOM 01/93(*), Private use of official telecom facilities c. Telephone log form (*)
<input type="checkbox"/>	9. Prepare forms for telex/fax messages.	a. Model format (*)
<input type="checkbox"/>	10. Establish communications log and chron files. Advise staff on addressing all communications procedures.	a. Radio message chron forms(*) b. IOM/009-FOM/009/2005—Budgeting guidelines for IT & Telecommunications(*)
<input type="checkbox"/>	11. Establish a regular system (shuttle) for transport of mail and personnel between sub office and branch office (if necessary).	a. Shuttle Passenger Manifest (*)
<input type="checkbox"/>	12. Determine Admin Vehicle needs : Landcruisers, Pick-ups, saloons and/or minibus.	a. Excerpts SFAS Handbook b. Excerpts IAPSU Catalogue

□	44. Set up distribution system with central location of trays. Consider local construction of pigeon holes. Establish document circulation system.	<ul style="list-style-type: none"> a. Example Action Sheet (*) b. Example Circulation Slip(*)

Annex 2: Suggested field filing system

1. A file list should be established immediately on the opening of a new office. It should be done in such a way that it can expand and contract to take account of new situations. One must achieve the correct balance between being too specific and too general.

2. Three types of files should always bear a standard format reference or symbol whether maintained at Headquarters or in the Field: personnel (PER/IND) files, individual case (IC) files and project files. The latter symbol is always allocated by Headquarters. A personnel file bears the file reference PER/IND FAMILY NAME, given names, e.g. PER/IND SMITH, Ms Jane Marie. An individual case file bears IC FAMILY NAME, given names RUR (country of residence)/RUR (country of origin) e.g. IC SMITH, Ms Jane Marie RUR/RUR. A project file bears year/source of fund/country of operation/assistance type/project number, e.g. 98/EF/RUR/EM/140.

3. An indication of subject files which might be required is given below. The number designates a subject not a file. Accordingly, files may comprise two or more file numbers.

Do not make subsequent perusal difficult by filing items out of sequence.

4. Security should be considered when filing documents, in paper and/or electronic form. Files which should be destroyed in the event of evacuation of the office should be marked in advance. These should include individual case files and personnel files.

Suggested file list

1. General & external affairs

100 UNHCR structure/mandate & gen. info.
101 Executive Committee
102 IOM/FOMs

110 Relations with (host) Government
111 Relations with local Consulates
112 Inter-Agency meetings
113 NGOs (general & alphabetical by agency)
114 UN Agencies (general & alphabetical by agency)
115 Inter-Governmental Organizations (general & alphabetical by agency)

120 Reports from the field
121 Situation Reports (SITREPS)
122 Camp profiles

130 Missions to the office (UNHCR & alphabetical)
131 Missions by office staff (alphabetical)
132 Visitors to the office (non-UNHCR & chronological)

133 Public information activities & media relations
134 Press releases & press clippings
135 Conferences and special events

140 Training/seminars/workshops

150 Fund raising/contributions

2. Protection

200 Protection general – UNHCR
201 Human rights/country of origin info. (RUR – alphabetical)

210 Protection (host country)
211 Detention
212 Determination

Introduction

1. In emergency operations, proper telecommunications will greatly increase the overall control, coordination, and effectiveness. The establishment of information systems and telecommunications links between field offices, emergency managers, implementing partners, logistics/transport staff, and technical experts will significantly enhance the capacity of the international relief system response. Effective communications require appropriate equipment, infrastructure, and good management.

Communications management

2. With improved means of communications, even from very remote locations, the proper management of communications has assumed great importance. The structure and flow of communications should reflect that of the management of the operation, with communications being channelled in a properly structured manner.

At each level reports and information received should be analysed and consolidated before being passed to the next level.

Raw information should not be routinely transmitted simultaneously through several levels of the management structure by copying reports widely, in addition to directing them to the person responsible for action. Distribution of information should be restricted to those who need it for the exercise of their functions and communications traffic in general should be restricted to that which is necessary.

3. Originators of communications should always ask themselves what the purpose of the message is, who will be receiving it, and whether the information contained is sufficient and appropriate for the purpose.

4. Under the pressures of an emergency there is sometimes a tendency to exchange incomplete information. If the information is insufficient for the purpose of the message, and if the matter cannot wait, then acknowledgement of gaps may save time and trouble. For example, “further information being obtained but meanwhile please react on points...”

5. The most appropriate means of transmission for the message should be considered in view of cost, urgency and bulk. For example, avoid using the telephone or fax when the message could be passed by electronic mail (email). Similarly, large amounts of data, unless very urgent, should be sent via pouch or mail rather than by email.

6. Using or developing standard forms can assist communications management, as they can act as a checklist for information usually transmitted in that form of communication (sitreps are an obvious example – see the annex to chapter 8 on implementing arrangements.)

7. An effective referencing system must be used – this is a major factor in ensuring good communications. Correct numbering and/or referencing will greatly help identify earlier communications. It will also provide a means to systematically track actions required and help maintain orderly and disciplined communication. See chapter 20 on administration for more information on a filing system. Annex 2 describes the official UNHCR message identification system which is used by the Telecommunications Unit.

Use separate messages for clearly separate subjects.

8. The immediate requirement for communications may be satisfied by telephone, email and fax. However, regular pouch, courier or mail services should be established as soon as possible. A checklist for communication needs, which should be considered when setting up an office, is

contained in chapter 20 on administration. In addition, the Checklist for the Emergency Administrator contains guidance, forms and information for setting up different types of communications.

Telecommunications

Telecommunications staffing

9. Effective telecommunications requires staff and equipment dedicated to that task. When planning telecommunications requirements, Emergency Preparedness and Response Section (EPRS), the Regional Telecommunications Officer and the Telecommunications Unit at Headquarters should be involved as early as possible. These can help to identify experienced UNHCR telecommunications staff that could be deployed to the operation. Emergency staff can include telecoms technicians, operators and officers from UNHCR's standby arrangements. If necessary these resources can be used to supplement UNHCR Telecom staff.

Telecommunications infrastructure

10. The existing telecommunications infrastructure of the country may not support UNHCR's requirements, because the infrastructure may be either inadequate or damaged. Certain security situations can also result in the telecommunications facilities being closed down or drastically reduced (in which case cellular telephone networks would also be unavailable).

Types of telecommunications

11. The following are the principal means of telecommunication currently available for use by UNHCR:

- i. **Telephone.** Telephones can be connected through standard landlines or cellular networks for communications within the country, and through international or satellite connections (VSAT, INMARSAT, Thuraya, Iridium, etc.) for communications with other countries.
- ii. **Fax.** Facsimile (fax) operates over standard telephone lines, or satellite (VSAT, INMARSAT) connections. Fax facilities are available to and from most countries, however it is more expensive and less easily relayed than email.
- iii. **Email.** Email also operates over standard telephone lines or satellite connections. In the initial phase of an operation, email can be obtained through portable satellite data terminals, or using local phone lines if available, and later the SITA network or VSAT satellite system can be used if there is a suitable connection point.
- iv. **Radio.** Radio is mostly used for voice communication. Installation by qualified technicians is required. In an emergency it is almost always necessary to set up radio networks to ensure communications between UNHCR offices and between UNHCR and other agencies. The radio network will also provide an emergency back-up for communications with Headquarters in the event of landline communications being cut. Mobile radios (handheld or installed in vehicles) enable staff in the immediate region to maintain contact with one another and with the office.
- v. **Transportable satellite services terminals.** From Thuraya to Iridium, Inmarsat mini M or Bgan, a wide variety of transportable satellite services terminals can be deployed in emergencies depending on the coverage area and the service required to fulfill the operation needs.
- vi. **VSAT (or Very Small Aperture Terminal – a slight misnomer as the smallest dish size is 1.8-2.4 metres in diameter).** VSAT provide a wide range of services in a private dedicated network. Telephone, fax, electronic data services the Internet and email communication services can all be provided using this type

of equipment. Installing VSAT is a substantial technical and financial undertaking and an analysis of the site and network required to support the operation must be carried out by qualified technicians.

UNHCR telecommunications network

Field preparations

12. The need for a UNHCR telecommunications network should be discussed at the highest appropriate level in the concerned ministry dealing with UNHCR matters (for example, the Ministry of Home Affairs). The advice of the technically competent authorities should be sought (for example the Ministry of Communications or post and telecommunications service). Note that Section IX of the Convention on the Privileges and Immunities of the United Nations provides that “the UN should enjoy for its official communications, treatment not less favourable than that accorded to diplomatic missions in the country”.

13. Contact EPRS, the Telecommunications Unit at Headquarters or the Regional Telecommunications Officer as soon as the need for a telecommunications network is known. Give the proposed number and location of offices, and distances between them, so they can advise on the type of equipment needed. Permission to operate a radio station and frequency clearance must be obtained – in most countries there is a standard government application form.

14. In most cases HF and VHF frequency licences or permissions to operate have already been granted to the United Nations Development Programme (UNDP) and/or other UN organizations. The Telecommunications Unit or the Regional Telecommunications Officer will assist you in completing the government application form.

15. It is also necessary to obtain permission to operate satellite communications

installations. The competent authority will need to know specific information about operating frequencies and characteristics of the equipment. This information can again be obtained through the Regional Telecommunications Officer or the Telecommunications Unit at Headquarters.

16. As telecommunications are often regarded with suspicion, especially with systems outside the control of the state such as satellite phones and VSAT, contact your Regional Telecoms Officer to seek for advice on licensing before negotiating any specific agreement with the host country which could have technical or financial implications to UNHCR or our implementing partners in the operation.

Office accommodation

17. The physical requirements for telecommunications equipment should be kept in mind when choosing office accommodation (see chapter 23 on administration). For example, a radio antenna will require space either on the roof of the building or in an open area at ground level, and a room for the operating equipment very close to the antenna. For optimum results, the cable connecting the radio equipment with its antenna should be as short as possible, and not more than 50 metres.

18. Satellite equipment installations and VSAT in particular, require a clear and uninterrupted view towards the horizon in the direction of the equator (i.e. towards the southern horizon in the northern hemisphere, and towards the northern horizon in the southern hemisphere). The angle of elevation of the satellite terminal antenna above the horizon will depend on the latitude of the office; the highest angle to aim to a geo stationary satellite would be on the equator.

19. In the case of a VSAT installed on a building (on a flat roof for example), the building must be strong enough to bear the weight. If it is installed at ground

floor level, there should be enough space around it for a safety margin (4 m radius) to avoid the possibility of anyone coming too close to the transmitting antenna.

Radio equipment

20. There are two types of radio equipment generally used by UNHCR in field operations for voice and data transmission: high frequency (HF) and very high frequency (VHF) radio. Generally, HF communications are used for longer distances than VHF. The distance over which VHF is effective can be greatly extended by the installation of repeaters. VHF and HF radio would therefore be installed in the offices and in vehicles as appropriate; depending on the distance from base the vehicle is expected to travel.

High frequency (HF) radio networks

21. It is essential in remote areas to place a high priority on reliable long-distance communications. As well as helping to avert personal disaster, effective communications can save you time where breakdowns might occur.

22. HF communications are free of charge. The units can be used for medium and long range voice communication and are easy to operate when using radios with selective calling such as the units used by UNHCR. These equipments are fairly expensive to purchase and require a proper antenna system, a technician to install them and some training to operate properly but a contact with another station within in UNHCR network is virtually assured.

HF frequencies and propagation

23. When HF radio waves are generated by the transceiver there are two components:

The ground wave, which travels directly from the transmitting antenna to the receiving antenna following the contours of the earth and the sky wave, which travels

upward and at an angle from the antenna, until it reaches the ionosphere and is refracted back down to earth, to the receiving antenna.

- Ground wave is used to communicate over shorter distances usually less than 50 km. Because ground wave follows the contours of the earth, it is affected by the type of terrain it passes over. Ground wave is rapidly reduced in level when it passes over heavily forested areas or mountainous terrain.
- Sky wave is used to communicate reliably over medium to long distances up to 3,000 km. Whilst the nature of sky wave propagation means it is not affected by the type of terrain as in ground waves it is affected by factors involving the ionosphere.

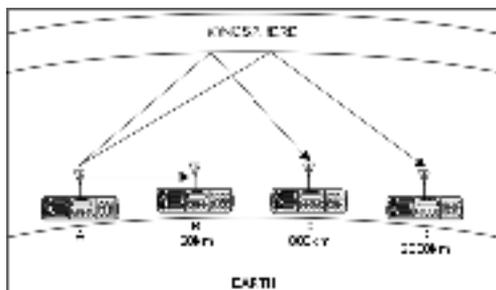

24. During the course of the day, the sky wave is significantly affected by the height of the ionosphere above the ground. When the sun is higher the ionosphere will be higher and the best frequency to use for long distance communication will be higher. At night, the sun being lower on the horizon, the best frequency to use for the same distance will be lower.

25. The following illustrations show the characteristics of ground wave and sky wave propagation during day and night time. In each illustration the height of the ionosphere above the ground is shown. In both illustrations Station A communicates with Stations B, C and D. Propagation from Station A to B is by ground wave. The diagrams illustrate that the ground wave is not affected by the time of day and the height of the ionosphere above the ground. Propagation from Station A to C and D, is by sky wave and the diagrams illustrate the sky wave is significantly affected by the time of day and the height of the ionosphere above the ground.

26. Under each diagram there are recommended working frequencies listed which will also vary according to the time of year

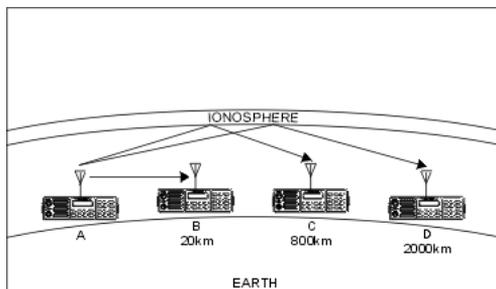

and other factors and are intended only as a guide.

Day:

The sun is higher, the best frequency to use is higher
 A to B - Possible optimum working frequency is 3 MHz
 A to C - Possible optimum working frequency is between 7 - 9 MHz
 A to D - Possible optimum working frequency is between 13-16 MHz

Night:

The sun is lower, best frequency to use is lower
 A to B - Possible optimum working frequency is 3 MHz
 A to C - Possible optimum working frequency is between 5 - 7 MHz
 A to D - Possible optimum working frequency is between 9 -12 MHz

Certain weather conditions and man-made electrical interference may cause a continuous or intermittent increase in the level of background noise and may affect the success of your communications via HF.

HF systems configuration and installation:

27. The way your system is configured, the choice of antenna system, the power supply used and the quality of the installation are extremely important and will affect the success of your HF communications.

28. In order to allow interconnection with implementing partners and sister agencies, the UNHCR HF radio network is in most operations, integrated in a UN common system HF network. A standardized selective call system defines 2 digits of the SelCall for the alphabetical sequence for the letter of the agency followed by a sequential number for the bases within the same radio network.

The SelCall (selective calling) system is a digital means of calling and station identification. This feature is installed as standard on all UNHCR HF radios. SelCall enables direct and positive contact on calling frequencies with any station maintaining a SelCall watch.

29. Regional Telecoms Officers and their technicians performing UNHCR HF systems installations have already established a frequency plan and a channel selection guide for the area of operation. Please contact them for advice.

Very high frequency (VHF) radio networks

30. VHF covers the spectrum ranging from between 30 to 300 MHz. Equipments in this band of frequency are used to ensure local/regional communications in our operations. An efficient coordination tool with our implementing partners and sister agencies, VHF is also an essential component of UNHCR staff security

VHF communications operation

31. There are two possibilities for VHF networks. The simplest, called “simplex network” uses a single frequency and has a limited range based on direct wave

transmission. The more complex called alternate semi duplex system involves the use of a repeater. In difficult areas like cities, mountainous areas or deep forest, but also for handheld to handheld, in order to increase the coverage the use of a repeater is essential.

32. Repeaters are automatic transmitters/receivers that provide a greater transmission and reception range. In effect, the two parties talking are not receiving direct signals, but signals linked through the repeater. Generally these units will be installed as high as possible, for example on a high building, on a mast or tower, or mountain to give the best coverage.

33. A unified VHF system such as our usual operations radio networks will contain both simplex and repeater channels. A user is then able to determine which channel was most applicable to use based on the distance they were from the other party.

VHF frequencies and propagation

34. VHF waves travel in what is known as direct wave. Direct waves propagate the distance that one can see (line of sight), typically with a range of up to 20 Km, depending on the topography of the area.

35. The range of a VHF network is heavily dependent on the height of the antennas. Variations in elevation and geographical features will affect the range. In planning a VHF network to have good coverage close attention must be paid to the geographical features of the area required to be covered.

36. Once again, Regional Telecoms Officers and their technicians performing UNHCR VHF systems installations have probably already established a frequency plan for the area of operation. Do not hesitate to contact them for advice.

Radio call-signs

37. Each radio installation will have its own unique call-sign. The office installation is known as the “Base” station, the vehicle installations are “Mobiles”. It is useful to have a formal naming convention for the call-signs, in order to provide a logical reference. For example, one letter can be used to signify the country of operation, one letter to signify the location, followed by one letter for the agency concerned. Remaining letters and figures may be added to provide additional clarity, if the number of users on the network is particularly high. (The country letter is normally omitted, unless cross-border operations are taking place).

38. For example, a UNHCR office installation in Ruritania, Townville would be **(R) T R Base**, shortened to T R Base. A vehicle installation for the same office would be **(R) T R Mobile 1** (T R Mobile 2, etc.).

39. The phonetic alphabet (see Annex 3) is used so that the call signs can be more readily understood over the radio, thus the above example becomes Romeo Tango Romeo Base (shortened to Tango Romeo Base), or Romeo Tango Romeo Mobile One. Call-signs for individuals using handheld radios will normally follow the struc-

Maximum indicative distances using VHF:

	Hand held 5W, 20 cm antenna	Hand held 5W, Car antenna	Mobile 40W, Car antenna	Base 40W, Base antenna
Hand held 5W, 20 cm antenna	3 Km	5 Km	10 Km	20 Km
Hand held 5W, Car antenna		15 Km	15 Km	30 Km
Mobile 40W, Car antenna			40 Km	60 Km
Base 40W, Base antenna				100 Km

ture, for example (for UNHCR Townville, Ruritania):

- T R 1 Representative
("Tango Romeo One")
- T R 1 1 Deputy Representative
- T R 1 2 other staff member in
Representative's office

- T R 2 Senior Administrative Officer
- T R 2 1 Administrative Assistant
- T R 2 2 other administrative staff
member

- T R 3 Senior Logistics Officer
- T R 3 1 Logistics Assistant

Standard 1st digit call number system:

Fixed:

- 1 = Management and miscellaneous
senior staff
- 2 = Finance and administration
- 5 = Security
- 8 = ICT / Technical Services

Recommended:

- 3 = Logistics
- 4 = Programme
- 6 = Agency defined
- 7 = Drivers / Transport
- 9 = Visitors

40. Dedicated numbering prefixes should only be used for departments or user groups large enough to justify a dedicated prefix. For further information regarding call-signs, refer to the Regional Telecoms Officer in charge of the operation area.

Field-Headquarters telecommunications

41. Email allows the field to communicate directly with individuals at Headquarters and at field offices where a Local Area Network (LAN) Email Post Office is installed. However, email messages sent directly to individual staff email addresses may not be read and acted upon immediately if the staff member is unexpectedly

absent. It is better, therefore, to address messages that require immediate attention to a generic email address, these are addresses with the form HQxxnn, where xx are letters indicating the organizational unit and nn are digits denoting a subunit, e.g. HQAF04 is the generic email address of Desk 4 of the Africa Bureau. Urgent messages may be copied to the Telecommunications Service Desk at Headquarters, who will alert the relevant Desk Officer, or Duty Officer, as appropriate.

Data security in UNHCR operations

42. Virus and hacker attacks, identity theft, destruction of data, leak of information or simply lost data on your workstation... Data security is essential within an office. Simple practices will help you to protect the refugees, your colleagues and the organization:

- As much as possible close your lockers, cabinets, drawers and door when leaving the office.
- Ensure that computers are switched off when unused.
- Make regular backups and store them in a separate and safe location. If the area is unsafe think about which documents or files will be needed in case of evacuation.
- Ensure your workstation has an updated anti-virus software.

43. The Internet creates many threats to our personal privacy. Your cyberspace online activity may lead to significant privacy risks.

- Expect little to no privacy unless explicit protection measures are employed.
- Assume that your online communications are not private.
- Be aware that applications may retain passwords for subsequent reuse. (This is important to remember for libraries, Internet cafes, etc.).

Privacy and security for email

44. Drafting a document on a sensitive refugee case? Need to share it with colleagues away from the office? Unless action is taken, documents transmitted over the Internet are in “clear text,” meaning readily readable.

- Messages sent using and within the UNHCR email system, including correspondence with Field Offices whose addresses appear in the Address Book, may be assumed to be secure.
- Under no circumstances use free web based mail services for UNHCR official correspondence. If you can get access to a web based service you can get access to the official and secured UNHCR GroupWise internal email service.
- Do not include in a message transmitted via the Internet any information you would not put on a postcard.

Photocopying and printing

45. Email and document security within UNHCR offices is often jeopardized by printing and photocopies.

- Restrict the number of copies to the strict minimum
- Collect immediately your documents at the printer
- Use a document shredder to destroy restricted documents

Security and passwords

46. Deciphering passwords is one of the most commonly used methods for hackers

to gain unauthorized access to information systems. With a user name and password in hand, intruders can masquerade as you. Carefully follow UNHCR official guidelines in protecting your security passwords.

Emergency response kits

47. UNHCR EPRS unit maintains a stockpile of IT and telecommunications equipment for rapid deployment to emergencies. The equipment will provide emergency response staff with immediate communication links from even the most remote locations.

For detailed information on these kits please refer to the Emergency Catalogue.

Global Service Desk – operating hours

48. Should you need technical assistance for IT or telecommunications related questions, the Global Service Desk at Headquarters is staffed between the following local Geneva times:

Operating hours: Monday - Friday,
0800 - 1800 Geneva local time, except
UN official holidays in Switzerland
(subject to modification)

Global Service Desk email address:
GlobalSD@unhcr.org

Global Service Desk telephone number:
+41 22 739-8888

49. Swiss time is one hour ahead of GMT in winter and two hours ahead in summer. Arrangements can be made to extend these working hours, as necessary, in emergencies.

Annex 1: Common communications equipment and terminology

Common name or acronym	Full name	Description and use
SATCOM	Satellite Communications	Generic term for any satellite communications system.
INMARSAT	International Maritime Satellite Organization	Inmarsat is a Global satellite service provider offering a wide range of services from mobile beacons to high speed data services.
Mini-M	Refers specifically to INMARSAT Mini M service voice terminal.	Small laptop sized satellite telephone terminal mostly used for voice communication. These units are widely used in UNHCR.
BGan / RBgan	Refers to specific INMARSAT BGan /RBGan services data modem terminals.	Small laptop sized satellite Telephone terminal mostly used for data /high speed data communication. These units are widely used in UNHCR.
Thuraya	Satellite system	Combined Satellite/GSM phone with regional coverage using one geo stationary satellite service provider.
VSAT	Very Small Aperture Terminal	Satellite system which allows multiple lines of telephone, fax and data to be transmitted via a selected geo stationary satellite.
GroupWise	Novell GroupWise Mail	Standard UNHCR email application.
SITA	Société Internationale des Télécommunications Aéronautiques	An organization providing a global data communications network, mainly airlines but also non-airline customers like UNHCR.
HF	High Frequency	Range of frequency (HF : 3 to 30 MHz) used for long distance radio communication.
VHF	Very High Frequency	Range of frequencies (VHF : 30 to 300 MHz) used for short distance radio communications. VHF is used in most of UNHCR operations.
UHF	Ultra High Frequency (Higher than VHF)	Range of frequencies (UHF : 300 to 900 MHz) used for short distance radio communications.
Repeater	Repeater	Equipment used to extend the range of VHF short distance radio communications devices to a range of 20 to 80 km, depending on the topography.
Handset	Radio Handset Terminal	Handheld VHF or UHF radio transceiver.

Annex 2: Message identification

The following instructions are for telecommunications operators who need to keep a formal log of all messages received and transmitted (including email, fax and PACTOR). The principles are that in each case “HCR” must appear in the prefix and whatever the type and means of communication, each message must bear one number unique to that transmission for each addressee.

Components of the message identity are:

- Message from Headquarters to the Field: HCR/aaaaa/9999
- Message from the Field to Headquarters: aaaaa/HCR/9999 where aaaaa is the official UNHCR location (Duty Station) code of the Field Office concerned and 9999 is a four figure sequential number starting at 0001 on the 1st of January each year.
- Between field offices: aaaaa/bbbbb/HCR/9999 where aaaaa is the five letter location code for the sending field office and bbbbb is the five letter location code for the addressee, and 9999 = four figure sequential number, starting at 0001 on the 1st of January each year.
- To non-UNHCR addressees: aaaaa/MSA/HCR/9999

There are two categories of four figure sequential numbers which may be used:

Category A is used for communications between Headquarters and field offices and between field offices with a considerable message exchange. The number used would be the next in the series for communications that year between the originator and addressee.

Category B is for UNHCR addressees who do not fall into Category A and for non-UNHCR addressees. If there are many such messages, two series may be used: UNHCR and non-UNHCR. All series or sequences restart at 0001 on the 1st of January.

Examples

Category A messages:

HCR/ANGLU/0123 means the 123rd message from Headquarters to Luanda, Angola this year.

ANGLU/HCR/0210 means the 210th message from Luanda, Angola to Headquarters this year.

ANGLU/RSAPR/HCR/0097 means the 97th message from Luanda to Pretoria, South Africa this year (where Luanda and Pretoria use sequential numbering).

Category B messages:

ANGLU/SENDA/HCR/0024 means a message from Luanda to Dakar, Senegal, and which is the 24th Category B message this year from ANGLU (where Luanda and Dakar do not use sequential numbering).

If there is more than one addressee, a separate message identity must be used for each. If the message is being sent to some addressees for information only, this should be indicated in brackets after the respective message identity. For example messages from Luanda to Headquarters for action, copied to Dakar for information, would bear the following:

ANGLU/HCR/0124

ANGLU/SENDA/HCR/0024

(SENDA for info)

In order that the system can work effectively any missing sequential number in Category A must be reported to the other category A addressee as soon as possible, and the last number of the year (or of a series) must be reported to each category A addressee. If a category A number is duplicated by mistake, correct this by allocating the next available number and reporting this number to the addressee by a service (SVC) message. Note that the SVC message itself should also be numbered.

Indicate the date or subject to avoid any danger of confusion.

Annex 3: Phonetic alphabet

Letter	Phonetic Equivalent		Numeral	Spoken as
A	Alpha	1	0	Zero
B	Bravo	2	1	Wun
C	Charlie	3	2	Too
D	Delta	4	3	Thur-ree
E	Echo	5	4	Fo-wer
F	Foxtrot	6	5	Fife
G	Golf	7	6	Six
H	Hotel	8	7	Seven
I	India	9	8	Ate
J	Juliet	10	9	Niner
K	Kilo	11	<p>In general, numbers are transmitted digit by digit except that exact multiples of hundreds and thousands are sent as such.</p> <p>Example:</p>	
L	Lima	12		
M	Mike	13		
N	November	14		
O	Oscar	15		
P	Papa	16		
Q	Quebec	17		
R	Romeo	18		
S	Sierra	19		
T	Tango	20		
U	Uniform	21	12	Twelve
V	Victor	22	44	Fo-wer Fow-er
W	Whiskey	23	90	Niner zero
X	X-Ray	24	136	Wun thuh-ree six
Y	Yankee	25	500	Fife hundred
Z	Zulu	26	16000	Wun six thousand

Annex 4: Radio communications procedures for UNHCR

Getting prepared and transmitting

- Check the radio is prepared for operation :
- VHF Handhelds – Always ensure that the battery is charged and have a spare available. Check that the antenna is attached correctly.
- HF Mobiles/Base – Check power supplies regularly. Check cable connections i.e. antenna, power supply, microphone.
- Decide beforehand what you are going to say, ensuring that it will be clear and concise. Make notes if necessary.
- Check that no one else is speaking on the network before you start. In the case of HF mobile or base stations do not attempt to use Recall if the network is busy.
- Avoid excessive calling. In particular with HF or VHF selective calling system. Over HF, It can take up to 30 seconds for the remote station to generate its automatic reply. Calling again too soon you will not hear an incoming reply from the called station.
- The called station may be able to hear you but be unable to reply, or you may not hear their reply. Make one last call stating “NOTHING HEARD, OUT”. The other station can then call you back when they are in a more suitable location to do so.
- If your message is long, divide it into sensible phrases, pause to allow your message to be understood (and written down if necessary) while maintaining a natural rhythm.
- Use standard pronunciation. Emphasize vowels sufficiently. Avoid extremes of pitch; do not let your voice drop at the end of a sentence. Speak in a moderately strong voice but do not shout, as this will distort the signal.
- Hold the microphone at about 5 cm from your lips while speaking. Shield the microphone from background noises.
- Be aware that everything that you say can be heard by anyone using a radio receiver on the same frequency. Depending on the situation in the country of operations, it may be wise to use simple codes (e.g. Alpha-Numeric codes for locations, call signs for names, etc.)
- Ensure that each user on the network is registered on a master list held by the Radio Room, and that any unauthorized call signs heard on the net are noted and the users (if known) are properly registered or informed that they do not have permission to use the network.
- Never transmit military or any other restricted information on UN radio network as it could have a direct impact on your own safety.

Always remember ALL field communication systems used by UNHCR can be intercepted and cannot be considered as secured.

Procedure words

Pro Word	Meaning
Acknowledge	Confirm that you have received my message and will comply (WILCO).
Affirmative	Yes/Correct
Negative	No/Incorrect
All after	Everything that you (I) transmitted after....
All before	Everything that you (I) transmitted before....
Break Break!	All stations will immediately cease transmission leaving a blank in their message for the incoming station to join the network on hearing that ProWord. The station Breaking has urgent message.
Correct	You are correct.
Correction	The correct version is... Your last transmission was incorrect; the correct version is....
Disregard transmission	This transmission is an error, disregard it.
Do not answer	Station(s) called are not to answer this call, acknowledge this message, or to transmit in connection with this transmission.
Figures	Numbers follow (in message).
Message	I have an informal message for you.
Message follows	I have a formal message which should be recorded (e.g.) written down.
Over	I have finished my turn. A response is expected. Go ahead, transmit.
OR	I have finished my transmission.
Out	(Over and Out are never used together). No reply is expected have nothing more for you, do not reply, I shall now call another station on the net.
Read back	Read back the following message to me exactly as received.
I read back	The following is my reply to your request to read back.
Relay to...	Transmit the following message to all addressees or to the address immediately following.
Relay through	Send this message by way of call sign....
Roger	I have received your last transmission satisfactorily.
Roger so far?	Have you received this part of my message satisfactorily?
Say again	Repeat all of your last transmission.
Say again all (word)	Repeat portion of message indicated.
after (before)	
I say again	I am repeating my transmission or portion indicated.
Send	Go ahead with your transmission.
Send your message	Go ahead, I am ready to copy.
Silence –	Cease all transmission immediately.
Silence –	Will be maintained until lifted.
Silence!	Only used by Network Control Operator.
Silence lifted	Silence is lifted. Net is free for traffic. Only used by Network Control Operator.

Speak slower Faster I spell	Adjust the speed of your transmission. I shall spell the next word phonetically.
Through me	I am in contact with the station you are calling, I can act as a relay station.
Message passed to...	Your message has been passed to...
Unknown station	The identity of the station calling or with whom I am attempting to establish communication is unknown.
Verify I verify	Verify entire message (or portion indicated) with the originator and send correct version. To be used only at discretion of or by the addressee to whom the questioned message was addressed. That which follows has been verified at your request and is repeated. To be used only as a reply to verify .
Wait (wait – wait) Wait out	I must pause for a few seconds. I must pause longer than some seconds, and will call you again when ready.
WILCO	I have received and understood your message and will comply (only used by the addressee).
Word after...	The word of the message to which I refer is that which follows...
Word before	The word of the message to which I refer is that which precede...
Words twice	Communication is difficult. Transmit(ing) each phrase twice. This proword can be used as an order, request or information.

Reporting

When you are moving around, you should always report your location back to the base station either via HF or VHF. The base station should keep a log of all calls, in order to know where users are, at all times and it is of vital importance that the base is aware of your whereabouts in case of an emergency.

If you have to switch off your radio, or you intend to go somewhere where it is not possible to use the radio, you should first make a call and inform the base station that communication will not be possible for a certain period of time and provide an alternative means to reach you.

Inform the base station as soon as you are in a position to communicate again.

When in a convoy, follow convoy procedures, keep contact on regular base with convoy leader, keep track of your location even if you are not leading and ensure the base is regularly informed of your position.

Example of radio conversation

The calling station is indicated by the use of **this is** or **from**:

Bravo Romeo Base this is **Bravo Romeo Three Four**— message — over.

This is **Bravo Romeo Base** — send — over.

Bravo Romeo Base this is **Bravo Romeo Three Four**— Convoy 5a has just passed Sierra 3 and will reach Sierra 14:30 hours — over.

Bravo Romeo Three Four this is **Bravo Romeo Base** Message copied over.

Bravo Romeo Three Four Roger out.

What to do in an emergency

In an emergency it may be wise to take your time...

A good and clear reporting is essential. The more accurate your message will be the less confusion it will generate and the more efficient the assistance will be.

Decide beforehand what you are going to say and take notes if necessary:

What happened?

Where are you?

What do you need?

Don't panic and speak slowly. Call for help as follows:

**EMERGENCY EMERGENCY EMERGENCY
BRAVO-ROMEO-BASE THIS IS BRAVO-ROMEO-THREE-NINER,
BRAVO-ROMEO-THREE-NINER EMERGENCY!
DO YOU READ ME OVER?**

(Wait for response and then proceed or repeat).

**BRAVO-ROMEO-THREE-NINER this is BRAVO-ROMEO-BASE
SEND
OVER**

BRAVO-ROMEO-BASE THIS IS BRAVO-ROMEO-THREE-NINER Message:

Vehicle accident Location 46° 12 North 6° 10' East – On road N1 – 6 Km after Point Bravo – 2 Vehicles involved – 7 passengers total – All 3 UNHCR Staff are not injured- 2 Passengers non HCR heavily injured and requiring medical assistance – First aid in progress by HCR Team – Will revert with more accurate info.

HOW COPIED?

OVER

BRAVO-ROMEO-THREE-NINER this is BRAVO-ROMEO-BASE Good copy we are contacting First aid responder team will reach your location within 35 Minutes.

An emergency call must only be placed for a life threatening emergency

For a lower degree of urgency, use the word "SECURITY" instead of "EMERGENCY"

Any station hearing an "EMERGENCY" or "SECURITY" call should immediately stop transmitting and listen-out.

If you need to interrupt another radio conversation

- wait for a pause (immediately after you hear "OVER");
- call "BREAK BREAK BREAK. THIS IS **BRAVO-ROMEO-THREE-NINER, BRAVO-ROMEO-THREE-NINER. I HAVE AN EMERGENCY. PLEASE STAND BY**";
- pause transmission and listen to ensure the other communication has ceased;
- proceed with emergency call.

Radio checks

Radio checks should be carried out periodically during periods of low traffic. Signal quality is reported as strength/readability as follows:

Signal Strength	
LOUD	Your signal is strong
GOOD	Your signal is good
WEAK	I can hear you but with difficulty
VERY WEAK	I can hear you but with great difficulty
NOTHING HEARD	I cannot hear you at all

Readability	
CLEAR	Excellent quality
READABLE	Good quality, no difficulty in reading you
DISTORTED	I have problems reading you
WITH INTERFERENCE	I have problems reading you due to interference
NOT READABLE	I can hear that you are transmitting but cannot understand

Example

Tango Romeo Three One – this is Tango Romeo Two Five – Radio Check – over.

Tango Romeo Two Five this is Tango Romeo Three One – loud and clear – over.

In areas with potential security risk, a network radio check including position report and can be preformed at any time. Fixed schedule is not advisable as radio network users must be monitoring permanently the network.

Example

Tango Romeo Three One – this is Tango Romeo Base – radio check – over.

Tango Romeo Base this is Tango Romeo Three One – loud and clear – at Compound nothing to report– over.

Tango Romeo Three One – copied; Tango Romeo Three Seven – this is Tango Romeo Base – radio check – over.

Tango Romeo Base this is Tango Romeo Three Seven – good and clear – ETA Office 5 minutes – over.

Introduction

1. Stress is a feature of life and it can be both positive and negative. In its positive aspect, it enables us to cope with change and challenging situations by stimulating a number of biochemical reactions in the body that mobilize physical and mental energy. In such situations, stress allows us to respond effectively to increased demands. Once the challenge is over and this energy is no longer needed, our body adjusts its level of functioning to its usual level.

2. This becomes a problem when one is continuously exposed to challenges and changes and therefore to a continuous chain of biochemical reactions. Without an opportunity to properly rest and recuperate, these biochemical reactions start having a wear and tear impact resulting in a number of negative stress reactions. Although there are some individual differences in how people react to stress, everybody is likely to be affected by the negative impact of stress if not provided with an opportunity to recuperate. Such situations of protracted challenges are frequently found in humanitarian emergencies.

3. Apart from having an impact on the individuals, stress is also likely to affect to entire teams, starting with their interpersonal relationships, team morale, productivity and their security. Negative stress of an individual should be regarded as the problem of the entire team.

Challenges and stressors in an emergency situation

4. Below are causative factors which contribute, if not give way to, stress in an emergency situation:

- i *Environment.* Difficult climate, remote and isolated location, inadequate living conditions, militarized settings, high level of crime, cultural or racist attitudes towards outsiders, foreigners or women.

- ii *Organizational environment.* Organizational culture including rigid hierarchy, bureaucracy, allocation of resources and management style. An unsupportive and uncaring management style is quoted as the most frequent source of stress in an emergency context.
- iii *Social and interpersonal factors.* Forced intimacy and lack of social and recreational choices apart from one's colleagues. Interpersonal stress may arise from co-worker conflicts, abrasive or unskilled supervision, dysfunctional colleagues, dissatisfied receivers of one's service, family problems, and problematical or unhealthy relationships with others.
- iv *Personality factors.* Frustrated personal values (i.e. idealism) can be a strong source of stress. People in such situations tend to identify themselves with the success or failure of the work, particularly in isolated work sites.
- v *Biological factors.* Degree of fitness, acute or chronic physical illness, allergy, injury, trauma, or simple fatigue and exhaustion.
- vi *Psychological factors.* Threats of physical harm, earlier and more recent traumatic experiences, attacks on self-esteem, lack of self confidence, feelings of insecurity.

Identifying stress symptoms

Understanding one's own reactions to stressful situations, knowing how to handle these and early attention to symptoms can speed recovery and prevent long-term problems.

Cumulative stress

5. Cumulative stress builds up slowly as a result of the magnitude and multiplicity of demands, lengthy working hours and day-to-day frustrations and difficult living and

working conditions in emergencies. This character of an emergency operation is not likely to change but it is possible to contain the adverse stress reactions by implementing the stress management plan for the team.

6. Cumulative stress reactions develop slowly and the individuals affected by it do not necessarily observe changes in their pattern of interacting with the world around them. We all normally observe stress reactions in others much faster than in ourselves. Team leaders need to be particularly observant of individual reactions during an emergency.

7. Cumulative stress reactions can be seen in every facet of our lives and normally they are grouped into physical, emotional, cognitive, behavioural and spiritual categories. There could be changes in ordinary behaviour patterns, such as changes in eating habits, decreased personal hygiene, withdrawal from others and prolonged silences. The following non-exhaustive list gives an indication of some of the most observed symptoms:

Physical reactions:

- i. gastro-intestinal: dry mouth, impression of having ones heart in ones mouth, nausea, vomiting, sensation of bloating, heartburn, abdominal pain;
- ii. appetite changes, diarrhoea, constipation;
- iii. cardiovascular: elevated blood pressure, rapid heart beat, hot flushes, cold hands and feet, sweating;
- iv. respiratory problems: breathlessness, panting, sensation of not being able to breathe;
- v. musculoskeletal: cramps, back pain, trembling, nervous ticks, grimacing; and
- vi. neurological: headache.

Emotional reactions:

- i. anxiety;
- ii. irritability;
- iii. anger;
- iv. blame;

- v. lack of self-confidence;
- vi. feeling alienated from others;
- vii. desire to be alone;
- viii. negativism/cynicism;
- ix. suspiciousness/paranoia;
- x. depression/chronic sadness;
- xi. feeling pressured/overwhelmed;
- xii. diminished sense of pleasure; and
- xiii. loss of sense of humour.

Cognitive (intellectual) reactions:

- i. tired of thinking and obsessive thinking;
- ii. difficulty concentrating;
- iii. increased distractibility/inattention;
- iv. problems with making decisions/setting priorities;
- v. feeling indispensable/obsessions;
- vi. diminished tolerance for ambiguity;
- vii. rigid, inflexible thinking;
- viii. forgetfulness; and
- ix. problems with reasoning and verbal expression.

Behavioural reactions:

- i. reluctance to start or finish projects;
- ii. social withdrawal;
- iii. absenteeism;
- iv. unwillingness to take leave;
- v. substance abuse, self medication;
- vi. high alcohol consumption;
- vii. disregard for security, risky behaviour; and
- viii. changes in ones libido;

Spiritual/philosophical reactions:

- i. doubt of value system/religious beliefs;
- ii. questioning the major life areas (profession, employment, lifestyle);
- iii. feeling threatened and victimized;
- iv. disillusionment; and
- v. self-preoccupation.

8. The presence of a number of these reactions over longer period of time probably indicates that a person's coping ability is diminishing and work performance is being affected.

9. The signs and the degree of stress presented by a person in any given situation will vary, depending on the level of stress experienced, previous emotional experiences and the personality of the individual.

10. If the cyclic causes and resultant symptoms of cumulative stress are not promptly addressed, exhaustion sets in, leading eventually to “burnout”. Should this happen one needs a longer rest and counselling.

Traumatic stress

11. Traumatic stress is brought on by unexpected, violent events that threaten or claim life. These events may be on a large or small scale, but they are emotionally powerful and they overwhelm the individual’s usual coping abilities. Examples are deaths of colleagues in the line of work, deaths among those being assisted, especially children, personal encounter with violence such as being kidnapped or held hostage and witnessing violent events personally or even through media.

12. Staff might experience acute reactions immediately after a critical incident or a delayed stress reaction days and months after the event. In rarer cases reactions may come after a few years.

13. The reactions after a critical incident can be similar to cumulative stress reactions but in addition an affected individual is likely to experience physical hyper-alertness, intrusive memories and thoughts, strong reactions to reminders of trauma, an urge to avoid the reminders of trauma. Absence of these reactions (numbing) after a traumatic incident does not allow for an assumption that the individual concerned is coping well due to the possibility of delayed reactions. Although all these reactions are normal in such situations they are likely to be highly disturbing to the affected individual and, at times, uncomfortable for colleagues around.

14. Untreated traumatic reactions may develop into a condition termed Post Traumatic Stress Disorder (PTSD). The diagnosis of PTSD is made by a psychiatrist or psychologist based on the presence of various elements. The risk of PTSD can be considerably reduced by the appropriate pre-deployment preparation, on-site care including a supportive work environment, and appropriate psychological intervention following an incident.

Techniques for dealing with stress

Introduction

15. Stress management is a joint responsibility of the individuals concerned, team leaders/managers and the organization. While the organization supports the stress management strategies by setting the appropriate policies and providing resources, managers contribute to it by setting team norms that include stress management and by supporting their staff members to adhere to them.

Stress management strategies are effective the most when incorporated in the usual work routine and implemented regularly.

Individual stress management

16. Being well prepared, both physically and psychologically, is an important way to reduce the chances of harmful stress. This preparation includes:

- understanding stress and one’s own coping strategies;
- understanding your strengths and limitations;
- educating oneself in advance on the environmental factors including climate, culture, living conditions and also on job requirements;
- ensuring one’s family’s welfare during the deployment; and
- maintaining physical and psychological fitness.

17. To prevent stress overload during an emergency, individuals are encouraged to follow a basic guide for stress management which includes:

- get enough sleep;
- eat regularly;
- make frequent mini-breaks during the day;
- make time for regular physical exercise (minimum 20 minutes per day);
- avoid managing stress with alcohol, nicotine and self-medication;
- give expression to the stress: paint, write, punch a bag, and talk about the emotions you feel;
- monitor your negative thoughts (as they can undermine your energy to solve problems);
- use the buddy system – ask a colleague to remind you when you exhibit stress reactions so that you can do something about them on time.
- make sense of your experience: what are you learning about the operation, about yourself?
- recognize your limit and ask for permission to rest when it's reached.
- use appropriately your rest and recuperation leave.

Tips for managers on stress management

Team leaders and managers have a responsibility to set norms within their teams which facilitate the optimum level of the team's productivity and well-being. Each manager should be reminded that the period of long hours and high productivity will be short-lived unless followed by appropriate level of support and care.

18. A supportive managerial style includes elements of care leadership and motivational leadership. It includes structured but transparent communication with the team members, availability when appropriate, respect for individual needs, clearly set team norms and values, ap-

preciation of efforts and constructive and timely feedback.

19. Setting an example: Supervisors in particular have an important role to play as they can provide an example in the way they handle their own personal stress, e.g. by eating properly, resting and taking appropriate time off duty. Staff are less likely to abide to any stress management routine if it is not supported by their team leader.

20. The following ideas may serve as reminder to the manager about possible outcomes. While a number of tasks below can be delegated, your support to all of them is a key to success.

- i. Dedicate resources to ensure the appropriate working and living conditions.
- ii. Create a supportive climate in the office – model positive attitude, give frequent encouraging feedback to the staff.
- iii. Take a note of predominantly exhausting tasks and introduce a rotation of staff on those tasks.
- iv. Monitor the health and well-being of all team members – assign a Peer Support Person (or a team of PSP for bigger operations), pay attention to staff needs, provide feedback and ideas regarding containing the stress. Ensure that staff take time to eat and rest.
- v. Together with the team, create a stress management routine for the office that encourages staff to take short breaks with healthy snacks and water, exercise, rotate long days (duty system).
- vi. Provide briefings to the incoming staff on socio-cultural and political environment.
- vii. Provide sports and recreational opportunities: together with the team set up a mini-gym, recreation room (table tennis, badminton, TV/DVD space, newspapers and journals).

- viii. Ensure regular use of rest and recuperation (R&R).ix. Ensure that the out-going staff have an opportunity for a debriefing and feedback exchange.

Organizational support

21. UNHCR has recognized that stress as an important part of its operational environments around the world and that it has responsibilities in mitigating its impact on staff in the interest of both the staff's well-being and the operational efficacy. The Staff Welfare Section (SWS) of the Division of Human Resources Management (DHRM) is the dedicated resource based at the HQ and with regional capacities in Accra and Nairobi, in charge of providing individual and group counseling, team support and training. The SWS also contributes to the organizational policies that have an impact on staff welfare. The Medical Service, also a part of the DHRM, monitors health of UNHCR worldwide and determines the psychological and physical fitness to work.

22. The Peer Support Personnel Network is a project coordinated by the SWS. Members of the network are colleagues around the world trained in basic counseling skills and in dealing with specific areas of staff welfare problems including traumatic stress. Peer Support Personnel can be a good source of support in an emergency operation.

23. Most of the emergency operations have a system of rest and recuperation (R&R) which is a mechanism indicated by the HR policy on mental health travel for release of stress. While this is a provision bestowed by the organization, it is up to managers to ensure its implementation and that the staff use it.

Dealing with traumatic stress

Introduction

24. Intervention following a critical incident consists of a number of well coordi-

nated actions by the Field Safety Section, Medical Service, Staff Welfare Section, Personnel Administration Section, Desk and country operation management. The immediate goals are to secure the staff, to take care of medical needs, and provide basic comfort. Research has consistently shown that the level of support provided to survivors and the level of team cohesiveness amongst the team positively impacts on coping with traumatic stress. Coping capacities are likely to be undermined in situations where the survivors feel unsupported.

25. As described above, any event that involves a threat or damage to one's life is a potential source of traumatic stress. Although not everybody will react in the same way to a traumatic event, it is important that all staff involved receive professional support from within or outside the organization. Given the nature of traumatic stress reactions and their potential for a delayed symptom development, it is important that all staff involved in such an event receive timely support. The Staff Welfare Section will organize such support and provide advice on future handling and therefore it is important that such events are communicated to the Section without delay.

Actions to consider

26. The following actions can be taken by the managers:

- Ensure that colleagues exposed to the traumatic situation are accommodated, provided with a change of clothes and a meal in privacy and comfort. As a team leader, welcome the group in person.
- Ensure medical assistance is provided and coordinated with the UNHCR Medical Service.
- Provide the survivors with an opportunity to contact their families or important others.

- Ensure that the victims are not overwhelmed by supporters and that support efforts are coordinated.
- Maintain a high degree of respect towards survivors of traumatic events and respect their privacy especially when sharing personal information.
- With the assistance of the Staff Welfare Officer, arrange for psychological support as soon as possible.

27. Generally, the more difficult a critical incident is, the psychological impact is likely to be higher. This will also depend on the previous traumas experienced by the person and other personal factors. Encouraging staff to talk about their experiences might be beneficial but be sure to respect their feelings and their need to be quiet if necessary. A calm and reassuring presence might be more appropriate. You may want to provide a copy of the self-help guide for survivors of traumatic events *“Traumatic Stress Reactions”* (copies available from the Staff Welfare Section [SWS] or from *UNHCR Intranet: operational support – staff welfare section – publications and website*).

28. If colleagues are keen to talk, be a good listener. If a member of the Peer Support Personnel is in the country they may be available to assist, but the need for professional assistance will be assessed and provided by the Staff Welfare Section or UNHCR Medical Service. Psychological interventions are delivered on the basis of the WHO guidelines for dealing with post-traumatic stress reactions and are provided in a confidential manner.

29. Should the staff be required to give statements for investigation, inquiry or similar reports, consult the Staff Welfare Section or the Medical Service on the timing of such interviews. If there are multiple interviews, ensure that they are coordinated.

30. Once life-saving needs are no longer acute, managers need to assist their teams to shift gears. Supervisors can arrange supportive activities and make changes themselves which will model ways of coping with the stress of the let-down period after an intense initial emergency experience. The following ideas can help:

- i. Arrange for a team opportunity to discuss personal experiences during the emergency impact and initial response period. Help by a trained facilitator is advisable.
- ii. Hold “lessons learned” sessions, encouraging the participation of all staff, to provide constructive opportunities for staff at **every level** to discuss, evaluate and analyse procedures and the work.
- iii. Give recognition and appreciation for work performed.
- iv. Attend to the possible need for ceremonies or rituals to honour losses if relevant.
- v. Encourage team members to reconnect with family and friends. Trauma is isolating, but accounts of what happened and some information about normal stress reactions will help both staff and their families during the emergency crisis period and after it is over.
- vi. Assist in re-establishing regular work and personal routines as soon as possible.
- vii. Make time for regular recreational or team “time out” activities and encourage the participation of everybody.

Introduction

- The primary responsibility for the safety of staff members, their dependants and property and that of the organization, rests with the host government.
- Every effort should be made to facilitate the tasks of the government in the discharge of its responsibilities by making appropriate supporting arrangements and through regular liaison and exchange of information with the host country security officials.
- All of the recommendations below should be considered in addition to, and complementary with, actions taken by the host country security officials.
- Every office should have a security plan and a medical evacuation plan.
- The cardinal rule for landmines is that when in doubt, stay away. Inform the host country military. Any suspicious object should be treated as a landmine or booby trap.

The UN security system

1. UN system-wide arrangements are described in detail in the UN Field Security Handbook (see references) and outlined here.

UN organizations have agreed to system-wide arrangements for the safety of UN staff and property in the field.

The UN Department of Safety and Security (UN DSS), based in New York, acts on behalf of the Secretary-General to ensure a coherent response by the UN to any security situation. UN DSS produces weekly publications on security conditions on a country by country basis. In addition, the Field Safety Section at Headquarters can provide country specific information and advice

2. The primary responsibility for the security and protection of staff members rests with the host government.

This responsibility arises from every government's inherent role of maintaining law and order within its jurisdiction.

3. UNHCR and other UN organizations may lend assistance, when possible and to the extent feasible, to protect other people such as staff of NGOs working in cooperation with them. UNHCR has no legal obligation towards others working with refugees.

4. In each country, a senior UN official called the Designated Official (DO) is the person in charge of the security management arrangements of the UN system. The DO is accountable to the Secretary-General through UN DSS for the safety of UN personnel.

5. The principle responsibilities of the DO include:

- liaising with host government officials on security matters;
- arranging a security plan for the area and including provision for relocation of National staff and evacuation of International staff;
- informing the Secretary-General (through UN DSS) of all developments which may have a bearing on the safety of staff members;
- carrying out relocation or evacuation where a breakdown in communication makes it impossible to receive the Secretary-General's prior approval;
- forming a Security Management Team (SMT); and
- informing the senior official of each UN organization of all security measures.

6. The DO will form an SMT, the function of which will be to advise him or her on security matters. The SMT is normally chaired by the DO and consists of the Heads of UN agencies in country (who must attend in person unless officially out of the country). In addition certain other staff members, (such as field security officers; a medical officer; an internationally recruited staff member familiar with local conditions and languages; a staff member with a legal background and any agency staff who by training, background or experience will contribute to the team) may be invited by the DO to attend in an *ex officio* capacity as advisers or observers.

7. In large countries with regions separated from country headquarters in terms of distance and exposure to emergencies, a UN staff member may be designated as the Area Security Coordinator (ASC). The ASC acts on the DO's behalf and will normally have responsibilities for staff safety similar to those of the DO, but within that region of the country. UNHCR may be requested by the DO to undertake this role.

8. The ASC (or DO where there is no ASC for the region) will appoint security wardens who will have responsibility for security within particular predetermined zones. A separate warden system for nationally recruited and internationally recruited staff may be required. The warden system should include all humanitarian agencies.

9. The primary tool for security preparedness is the security plan, which is the key feature of the UN security system.

Essential plans

10. In addition to the basic security plan, UNHCR offices must have a medical evacuation plan, and may have a movement control plan and routine radio checks.

The security plan

11. The security plan will be country spe-

cific and have five phases. The DO may implement measures under Phases 1 and 2 at his or her own discretion, and notify the Secretary-General accordingly. Phases 3 to 5 will normally be declared by the DO only with the prior authorization of the Secretary-General. However, if there is a breakdown in communications, DOs may use their best judgement with regard to the declaration of phases 3 to 5, and report to the Secretary-General as soon as communications allow.

12. The UN security phases are:

Phase I: Precautionary

In this phase, clearance from the DO is required prior to travel.

Phase II: Restricted movement

This phase imposes a high level of alert on the movements of UN staff members and their families. During this phase all staff members and their families will remain at home unless otherwise instructed.

Phase III: Relocation

This phase is declared by the Secretary-General, on the advice of the DO. It includes concentration of all international staff members and their families, relocation of non-essential staff and families elsewhere in, or out, of the country. Deployment of new staff must be authorized by the Secretary-General.

Phase IV: Emergency operations

This phase is declared by the Secretary-General, on the advice of the DO. It allows for relocation outside the country of all international staff not directly involved with the emergency, humanitarian relief operations (i.e. of a life-saving nature), or security matters.

Phase V: Evacuation

This phase is declared by the Secretary-General, on the advice of the DO. The evacuation of all international staff should

be carried out according to plans prepared beforehand.

13. The person responsible for security at each location (DO, ASC) should draw up a security plan within the framework of the country security plan. This will need to be regularly updated. Each situation will be different and will require different levels and structuring of the plan. Guidelines for drawing up the plan are in the Field Security Handbook, and copied in the Checklist for the Emergency Administrator.

14. The following are typical headings in a security plan:

A. *Summary of the security situation at the duty station.*

B. *Officials responsible for security:* those in the local area, in Geneva and in New York, with their call signs, phone and fax numbers.

C. *List of internationally recruited staff members and dependants.* This will need to be updated constantly, and should include basic details such as full name, nationality, date of birth, passport and laissez-passer numbers with date and place of issue. A means of tracking visiting missions should be established. The UN Field Security Handbook contains annexes to record this information in a standard format; copies of these are also found in the UNHCR Checklist for the Emergency Administrator.

D. *List and details of locally recruited staff and their dependants.* This will need to be updated constantly.

E. *Division of area into zones.* Zones should be marked on a map with the numbers and residences of staff members clearly marked. The map should indicate the warden responsible for each zone.

F. *Communications.* This should include details of phone numbers, call-signs and radio frequencies of all staff, including those of offices in neighbouring countries.

G. *Selection of coordination centre and concentration points.* The plan should indicate a number of coordination centres and concentration points, and should indicate the stocks and facilities which should be available at these points. It may not be possible for all staff members to reach the same concentration point and alternatives should be foreseen.

H. *Safe haven and means for relocation and evacuation.* The plan should include information on all possible means of travel – by air, road, rail and ship as applicable. Normally only internationally recruited staff can be evacuated outside the country. Under the UN security system, the provisions for evacuation outside the country may be applied to locally-recruited staff members in only the most exceptional cases in which their security is endangered, or their property is lost or damaged as a direct consequence of their employment by UN organizations. Under the UN security system, a decision to evacuate locally recruited staff can only be made by the Secretary-General (based on recommendations by DO and UN DSS). However, during phases 3, 4 or 5, the DO may exceptionally either: a) permit locally recruited staff to absent themselves from the duty station on special leave with pay, or b) may relocate them to a safe area within the country and authorize payment of DSA for up to 30 days. Up to 3 months salary advance may be paid and a grant to cover transportation costs for the staff member and eligible family members. Arrangements to pay locally recruited staff these various amounts should be included in the plan.

I. *Essential supplies:* The plan should include estimates of the requirements for essential items of food, water, fuel etc. which will be needed by the community for a reasonable period of time. Individual items to be kept ready should also be listed. These include: passports, laissez-passeurs, vaccination certificates, travellers cheques and cash.

J. Plan for handing over the running of the office to the National Officer in charge.

Planning for evacuation

15. The security plan should note who will take what actions at the UNHCR office in the event of evacuation.

These actions include how to deal with confidential documents and individual case files (including those on computer files), financial data, cash, radios, computers and vehicles.

16. Any paper files which need to be destroyed in the event of sudden evacuation of the office should have been marked in a manner agreed-upon and understood by all staff. Such files would include: individual case files, local staff personnel files, etc. If time permits, the shredding and/or burning of these files should be a top priority. Emptying sensitive files onto the floor and mixing their contents with others will afford some protection if there is no time to burn them. Staff should be sensitive to the security situation and bear in mind when creating paper or electronic documentation that it might have to be left behind.

17. It should be agreed in advance which electronic files (including electronic mail files) should be deleted first. In order to truly destroy confidential electronic records from a computer disk (regardless of whether it is a hard disk or a floppy disk), it is necessary to use special software designed for this purpose. Merely deleting the file(s) does not remove the information from the disk, it only marks the space which the file occupies on the disc as being available for re-use.

Medical evacuation plan

18. Every office should have a medical evacuation plan to cover evacuation from that office. The plan should include information about the nearest medical fa-

cilities inside and (if appropriate) outside the country, what types of service they provide and to what standard, means of transport to these facilities in case of evacuation, and types of evacuation scenarios (the Checklist for the Emergency Administrator includes a format for a Medevac Plan, as well as flow charts 1 for decision-making for evacuation).

19. All heads of UNHCR country offices (i.e. representatives, chiefs of mission or, in their absence, the officer in charge) may authorize, without reference to Headquarters, medical evacuation of staff in the circumstances set out in detail in IOM/104/94FOM/107/94, New Medical Evacuation Scheme, and IOM/FOM 26/95, Medical Evacuation in Extreme Emergencies – SOS Assistance. These IOM/FOMs are included in the Checklist for the Emergency Administrator. Briefly, medical evacuation can be authorized:

- i. For all international staff and consultants and eligible family members, in order to secure essential medical care which cannot be secured locally as a result of inadequate medical facilities (and which must be treated before the next leave outside the duty station).
- ii For local staff and eligible family members, in situations of great emergency when a life-threatening situation is present, or in cases of service-incurred illness or accident.

In addition, evacuation can be arranged in extreme emergencies through SOS Assistance (a private company which provides 24 hour world-wide emergency evacuation). However, this is very expensive and not covered by UN insurance. It can be used in life-threatening situations, and where an evacuation by normal means cannot be organized in view of the gravity of the illness or injury. A password is needed before SOS Assistance takes action for UNHCR – heads of offices should ensure they obtain this password from the

Division of Human Resource Management. The password should be known by the Head of Office and the Deputy Head of Office.

20. The medical evacuation plan should be written with close reference to the relevant IOM/FOMs, and the advice of the UNHCR Programme Health Coordinator should be sought, as well as that of any medical NGOs. When an evacuation may be necessary, a UN Examining Physician should assist in decisions as to the degree of urgency and facilities required.

Movement control plan

21. A movement control plan should be prepared when there is a need to track the movement of vehicles, and should provide a means to determine the current location of the vehicles and passengers and whether they are overdue from a trip. The plan usually consists of a fixed schedule of radio calls to the vehicle from the base station (e.g. every 30 or 60 minutes) in order to report the current location of the vehicle to the base station. This information should be updated on a white-board (or electronic tracking system) following each radio call. The driver of every vehicle should confirm safe arrival at the end of the trip.

22. Other contingency plans. In addition to the plans listed above, UNHCR Heads of Office may need to draw up contingency plans for other possible or anticipated emergency situations applicable to the duty station and UNHCR's role. For example:

- i. civil disturbances in refugee camps;
- ii. attempted office occupations or "sit-ins";
- iii. earthquakes, hurricanes, floods or other natural emergencies; and
- iv. hostage taking

Routine radio checks

23. Routine radio checks should be instituted when the current location and wel-

fare of staff members needs to be known. Radio calls from the base station can be made on a fixed schedule or randomly.

Security

24. Keys to effective security are:

- i. First and foremost, personal awareness on the individual level.
- ii. Appropriate behaviour to diminish the risk of security incidents.
- iii. Appropriate response by the individual to security incidents.
- iv. Compliance with Minimum Operating Security Standards (MOSS).
- v. Consideration of security aspects (and full involvement of security specialists) from the earliest stages of planning for any UNHCR operation.

Personal security

25. For personal security, bear in mind the following:

- Be aware of and alert to your surroundings.
- Observe the behaviour of other people living in the area. Local people will probably know more about general security threats than you do.
- Don't travel alone.
- Don't carry large amounts of money.
- Don't travel after dark if it can be avoided. Most security incidents occur after dark.
- When leaving base, make sure someone knows where you are going and when you are expected back.
- Lock vehicle doors and keep the windows rolled up when travelling.
- Park vehicles to allow for fast exit.
- Don't take photographs around military personnel or military installations.
- Have cash, documents, and an emergency bag packed and ready to go at all times.

- Always be polite: be aware that your behaviour to local officials, police or military can rebound negatively on other staff.

Residential Security

26. Several steps can be taken to improve residential security:

- Make sure there are good solid doors. Never have glass doors on the exterior.
- Install a peep hole, a safety chain and a security bar.
- Keep the entrance door locked at all times, even when at home.
- Install bars and grills, at least on the ground floor.
- All windows should have locks.
 - Draw curtains at night.
 - Install outside lighting.
 - Have emergency power sources, candles and torches.
 - Keep a watchdog or other animals like goats, geese or peacocks.
 - Install a telephone or walkie-talkie.
- Compliance with the Minimum Operating Residential Security Standards (MORSS) approved for the duty station in accordance with local conditions. MORSS provides for reimbursement of some residential security measures (on a country by country basis).

Base security

27. Base security should be improved by:

- Hiring guards: The host country authorities sometimes provide guards. Guards hired by UNHCR are not permitted to carry lethal weapons while on duty. Guards should be trained and briefed, and should wear a uniform or some identifying garment.
- Ensuring there are lights: Lights should be powerful and should light up an area outside the perimeter

fence, providing a barrier of illumination in which intruders can be detected.

- Installing fences and controlling access: Double fences with razor wires form an effective barrier. There should be more than one entrance/exit. Sensitive locations (for example, the accommodation area, communications room, generators and fuel store) may need to be surrounded by a barrier of sandbags. Procedures to control access to the compound need to be established. The fenced compound should be self-contained and equipment (e.g. spare tires, jacks, fire extinguishers, first aid kits, generators, water pumps), should be checked and maintained on a routine basis.

Field security

28. Several steps should be taken by relevant staff and heads of office to improve field security:

- Develop a movement control plan (see above).
- When planning to travel, check the latest security situation with the DO, others who have been there, host country officials other UN agencies, NGOs, traders.
- Get all required authorizations, from the DO and host country authorities.
- Ensure that all staff know what to do in case of accident or breakdown – simple procedures should be established.
- Ensure that vehicles are properly equipped with extra food and water, sleeping bags, mosquito nets, tents, water filters, fuel, tow rope, jumper cables, spare tire, tire jack, flashlight, batteries, first aid kit, travel documents, radio, vehicle insurance papers, shovel and maps.
- Ensure that vehicles are in good mechanical condition and are checked

regularly. Certain items, such as brakes, tire wear, fluid levels, lights, installed radios, should always be checked prior to every field trip.

- Ensure that all staff know what to do at checkpoints – establish procedures for staff to follow. It is against UN policy to allow anyone carrying arms in UN vehicles.

Cash security

29. Ideally staff members should not carry large sums of money in cash. If there is a functioning banking system in the area, then this should be used to the maximum extent possible.

30. If it is necessary to transport cash then arrangements should be made with the host country authorities for protection of the funds. Cash in large amounts should be kept on hand for the shortest possible time, and should either be deposited in a bank or be disbursed quickly to pay salaries or meet other legitimate expenditure. Advance payments could be considered to reduce amounts of cash being stored (provided financial rules are adhered to).

31. Measures which can contribute to security while transporting cash include making use of:

- i. professional couriers;
- ii. armoured vehicles;
- iii. armed guards;
- iv. deception: there should be no regularity in the arrangements; the timing, route, and other details should change every time; and
- v. discretion: the number of people knowing about the movement of cash, the identity of persons carrying cash, their routes and timetables, should be kept to the barest minimum necessary.

Crowd control and security

32. If crowds cannot be avoided:

- Ensure that clear information is provided to the crowd, so that they know what is going on and what to expect.
- Work with representatives of the people to organize the crowd into small groups and get them to sit down.
- Do not engage in unruly group discussions.
- When discussing grievances, meet with a small number of representatives of the crowd, never with the mass meeting.
- Provide sanitary facilities, water, shade and shelter.
- For crowd control, use monitors from among the people themselves.
- If confronted by a crowd when in a vehicle, do not get out. Check that the doors are locked and drive away carefully.
- Maintain poise and dignity if confronted by a hostile crowd, do not show anger.

Mine awareness

33. In countries with high risk of mines, all offices should ensure there is appropriate training and reference materials (see references) – the information contained here is not sufficient, but provides only broad guidance.

34. It is extremely difficult to spot a mined area, so the first priority is to ensure you have up to date information about possible mined areas from local residents and demining organizations. Travel with a map marked with this information and update it by checking with local residents.

35. Be aware of the following:

- Signs: learn which signs indicate known mined areas (whether local signs, UN or other signs).
- No-go areas: avoid areas which are

avoided by the local population.

- Visible mines or indicators: some mines are visible. There may also be evidence of mine packaging.
- Disruption in the local environment: for example disturbed soil if recently laid, and depressions in the ground in an old mine field.
- Trip wires.
- Mine damage (e.g. dead animals) which could indicate the presence of other mines.

36. When driving, the following precautions should be taken:

- Wherever possible stay on hard surfaced roads.
- Always follow in the fresh tracks of another vehicle, at least 50 m behind the vehicle in front.
- Flak jackets can be used as a seat cushion and as a foot protection.
- Wear seat-belts, and keep windows rolled down and doors unlocked.

37. If you encounter a mine:

- Keep away, do not touch it;
- Do not try to detonate it by throwing stones at it;
- Stop the vehicle immediately;
- Stay in the vehicle, even if it is damaged and call for assistance.

38. If you have to leave the vehicle:

- Notify your location by radio.
- Do not move the steering wheel.
- Put on any protective gear available.
- Climb over the seats and leave the vehicle by the rear, walk back along the vehicle tracks.

Never walk around the vehicle:

- Leave at least a 20 m gap between people.
- Close the road to other traffic.

39. When travelling on foot:

- Never walk through overgrown areas: stick to well used paths.

40. If there is a mine incident:

- Do not immediately run to the casualty. Stop and assess the situation first. There may be other antipersonnel mines in the vicinity, and administering first aid to one victim could result in another victim.
- Only one person should go to the casualty, walking in his exact footprints, to apply first aid.
- Do not attempt to move the casualty unless absolutely necessary, call for mine-clearing and medical assistance.

41. Within the UN system, mine clearance and related issues are primarily the responsibility of the Department of Peacekeeping Operations (DPKO). Chapter 22 on voluntary repatriation contains some information about programme aspects of mines.

Protection equipment

42. Typical equipment that has been used by UNHCR includes:

- i. bullet proof vests for protection against most bullets;
- ii. flak jackets for protection against shrapnel;
- iii. helmets for protection against shrapnel;
- iv. ballistic blankets fitted in vehicles, for protection against hand grenades and anti-personnel mines;
- v. armoured cars;
- vi. shatter resistant windows;
- vii. military combat rations for concentration points; and
- viii. metal detectors for body searches.

43. These items can be ordered through the Supply and Transport Section in co-ordination with the relevant Bureau and Field Safety Section.

Security management

44. Heads of Offices, whether at field or branch level should take action to ensure the security and safety of staff members. In addition to the responsibilities implicit in the above sections, appropriate security management measures also include:

- Ensuring both you and your staff have access to relevant, accurate and up-to-date information.
- Providing systematic briefings with all staff on the security situation and on the security plan itself. Bear in mind that some staff, particularly national staff, may provide valuable input into these briefings because of their local knowledge.
- Encouraging staff awareness: a key to effective security is personal awareness and good individual response to security situations.
- Providing training to all staff on hazards specific to the duty station.
- Ensuring the availability of materials on staff stress management and security in the duty station (see key references).
- Reporting security related incidents to Headquarters (Field Safety Section).
- Ensuring there is good communication with other organizations and NGOs about the security situation.
- Ensuring the office has a medical evacuation plan. In addition, the country representative should ensure he or she (and their deputy) has the SOS assistance password in the case of extreme medical emergency.

Risk management

45. It is recognized that risk cannot be totally eliminated from UNHCR operations. It is therefore important for line managers in the field to understand how to *manage risk*. This goes beyond the technical and bureaucratic measures described above and involves a holistic and integrated approach to incorporating security considerations into the planning and conduct of operations from the outset. Specialist security advisers can help and support line managers, but it is ultimately UNHCR Heads of Office who are responsible and accountable for the safety of their staff. Special training packages on “*Security Risk Management*” have been developed to assist managers with this task.

Introduction

1. Increasingly, UNHCR finds itself in operational areas where military forces are present and active. This fact can have a critical impact on the well-being of humanitarian workers and on populations of concern to the High Commissioner.

2. Legitimately recognized armed forces operating within the boundaries of international humanitarian law play a vital role in ensuring a safe and secure environment for all civilians, including UNHCR beneficiaries and staff.

3. Distinguishing humanitarian activities delivered by civilian organizations from assistance delivered by military actors; and safeguarding a distinct humanitarian identity founded upon the principles of humanity, neutrality and impartiality is a key issue for UNHCR.

4. The operational-level relationship and interaction between humanitarian organizations and military forces usually managed in the form of civil-military coordination (CMCoord) is of much debate both within and outside the humanitarian community. In some cases, particularly where military operations incorporate humanitarian relief activities as part of their operations, military and humanitarians have conflicting objectives and operating procedures while evidently sharing the same “space”. More detailed information can be found in “UNHCR and the Military - A Field Guide”.

The Division of Operational Services (DOS), at UNHCR Headquarters, is UNHCR’s focal point for civil-military issues, and remains at your disposal for any advice or support that you may require.

5. Within UNHCR’s overall practical approach staff should be cognizant that:

- ♦ Not all militaries are the same. They vary significantly in such areas as structure, capabilities, attitude to humanitarian actors, and adherence

to international humanitarian law. This has an impact on the relationship with humanitarian actors. It also makes it difficult to generalize about the relationship with the military.

- ♦ Context is important. The mandate, mission, legitimacy, and local acceptance of a military presence, for example, can have an impact on the humanitarian community’s relations with a military force.
- ♦ In some instances the humanitarian community may issue specific guidance relating to a particular area or military. Ensure you are aware of any specific guidance.

United Nations civil-military policy and guidelines

6. The custodian of United Nations humanitarian policy on interaction between humanitarian and military actors is the Under-Secretary General for Humanitarian Affairs, who is also the Emergency Relief Coordinator (ERC). Three documents, issued by the Inter-Agency Standing Committee (IASC) and the ERC, are of particular note as they provide broad generic guidance covering many of the situations the humanitarian community faces and are as follows:

- i. Guidelines on the Use of Military and Civil Defence Assets in Disaster Relief 1994 (covering natural, technological and environmental emergencies).
- ii. Guidelines on the Use of Military and Civil Defence Assets to Support United Nations Humanitarian Activities in Complex Emergencies 2003.
- iii. Civil-Military Relationship in Complex Emergencies - IASC Reference Paper 2004.

In some situations the relationship with the military will be especially sensitive, particularly where the military is undertaking combat operations. This can result in a policy of limited contact.

7. In complex humanitarian emergencies, the Humanitarian Coordinator or the Resident Coordinator at the country or regional level, after consultation with the UN Country Team (UNCT) and the ERC, will determine the circumstances and the extent to which UN humanitarian agencies will interact and coordinate their activities with military forces. In certain operations, specific guidance may also be provided by the United Nations to its staff.

8. If there is any doubt as to the policy in force staff should refer to the Country Representative. Guidance can also be sought from the Division of Operational Services in addition to accessing UN coordination policy promulgated at the country and global level through the Civil-Military Coordination Section (CMCS) of the UN Office for the Coordination of Humanitarian Affairs (OCHA).

Interacting with the military: understanding, communication and negotiation

Introduction

9. Humanitarian agencies do not operate in isolation. The presence of a military force and other armed elements is fairly common in a situation defined as being a complex humanitarian emergency, and most especially in areas of armed conflict.

10. Militaries can also be deployed in support of the response to a natural, technological or environmental disaster. Military presence may include:

- i. The local or national military
- ii. Multi-national forces
- iii. UN peacekeeping troops
- iv. International military observers
- v. Foreign occupying forces
- vi. Regional troops or other officially organized troops

11. In most situations, a UNHCR officer may be required to establish a level of communication with military elements so as to ensure that different roles and responsibilities are fully understood, effectively coordinated and appropriately undertaken. The levels of interaction between UNHCR staff and military staff will vary, and to a large degree be dictated by the nature and complexity of the operational environment, the structure of the military command, and UNHCR policy within the country.

Ensuring an effective interaction with the military that serves the protection goals of UNHCR will require a clear understanding of the military context within a specific situation.

An understanding

12. Like the humanitarian community the military is far from being homogenous. Militaries encountered by UNHCR staff will differ in various ways:

- i. International legitimacy
- ii. Function, task, and level of training
- iii. Use of technology, doctrine, procedures
- iv. Understanding of humanitarian issues
- v. Observance of international humanitarian and human rights law
- vi. Delegation of authority

An appreciation of this diversity is particularly important. To the uninitiated, interaction with the military can present a bewildering array of acronyms, structures, and ranks.

The different mandates, characteristics and nature of these diverse military actors may necessitate that UNHCR relate to different groups with varying degrees of sensitivity or even with fundamentally different approaches. Of particular importance in situations in which there is, or has been armed conflict, is understanding as to who are, or were, the parties to the conflict.

UN integrated missions

13. Another key factor in forming UNHCR's relationship with the military, in particular UN peacekeeping troops is whether there is a UN integrated mission. While the degree of integration in a UN peacekeeping mission may vary, the aim of integration is to have all UN actors in a country working together towards the shared goal of restoring peace and security and creating the conditions for sustainable development and good governance. It is UNHCR policy to actively support the concept and development of integrated missions.

14. In some situations, the political leadership may assign the military the task of providing assistance to a population or, as in the case of United Nations peacekeeping missions, to directly support the work of humanitarian agencies. In other instances the mission statement of national and coalition forces is usually classified information. This makes it difficult to gauge the degree of involvement by the military in support of humanitarian objectives. Therefore, clear and effective communication is necessary at the earliest stages so that misunderstandings are avoided and that the best possible delivery of humanitarian assistance is ensured.

15. For UNHCR the primary objective of such communication is to facilitate implementation of its mandate – to safeguard the rights of refugees (i.e. their legal, social/material and physical protection), internally displaced persons (IDPs) and returnees, and to ensure full and unhindered access to them, together with the delivery of essential humanitarian assistance.

16. The level of interaction between humanitarian actors and military forces may depend upon a number of factors including:

- i. the nature of their intervention;
- ii. the degree of force which the military is authorized to use; and

- iii. the extent and seriousness of the emergency.

In some situations, particularly those where the military lacks international legitimacy and/or where it is not accepted or poorly perceived by the local population, interaction by humanitarian staff may be negligible or carefully controlled.

17. Contemporary military doctrine in many militaries, even for so-called “peace operations” or “peace support operations” emphasizes a need to rapidly vary “stance” or “force posture”. In one sector forces might be engaged in intense combat operations, whilst in another the same military might be seeking to win the “hearts and minds” of a population. In addition, these forces might be asked to quickly switch from one stance to another in one sector. It will be difficult for the humanitarian community to keep up with this fluid situation.

18. It is important when working alongside military forces that you are aware of their mission objectives, roles, responsibilities, and the authority under which they operate. This will determine the extent to which you may seek to coordinate your efforts with the military. Similarly, you should be aware of the military organizational structure. Understanding this structure is important as it will help you appreciate how decisions are made and how the military responds to changing situations.

Military organization

19. You should also understand military operating procedures. These differ among military forces and depend on:

- i. The size of the force
- ii. Its background
- iii. Its access to operational assets
- iv. The experience of its troops and their level of training
- v. National/cultural characteristics
- vi. The command/leadership structure

Military forces are hierarchical in their organization and have generally well defined command and control structures (although command in many multinational forces can be somewhat ambiguous – relying on significant political and technical military negotiation).

20. Military organizational characteristics can include:

- ◆ **Management by objectives.** The objectives of a military campaign are generally defined by political direction and resulting commander’s intent and “mission statement”. These objectives are included in a mission plan with a desired end-state. Completion of a military mission may not require a resolution of all aspects of a political, social or military problem.
- ◆ **Systematic planning processes and problem solving.** Most militaries have a developed systematic planning processes that include reconnaissance, thorough consideration of a situation (through use of tools such as the “Appreciation” or Staff Estimate” that attempt to think logically through an issue to consider all relevant factors and arrive at the best possible course and a plan). This can be somewhat different to planning in the humanitarian community.
- ◆ **Delegation.** The level of delegation of authority can vary widely between national militaries. Some have adopted doctrines that allow significant freedom of movement to lower commanders, who are basically given the outcome and any known constraints. Others have highly centralized methods of control.

21. The size of the military organization directly correlates to the degree of specialisation in tasks and attention to procedure. While the above features are not specific to the military alone, some of these or-

ganizational issues are very specific to military institutions. In addition, military units, offices and teams may develop operational codes and modalities applicable to a given situation.

22. UNHCR staff should try to understand and respect how the military hierarchy and their reporting lines (the so-called “command and control” structure) work:

- ◆ Determine how the various levels in the military structure relate to the structure in UNHCR’s presence.
- ◆ Make sure that the person you deal with has the authority to decide on issues that you are discussing or negotiating.
- ◆ Make use of liaison structures offered by the military. Designated CIMIC officers are often your first and most relevant ‘port of call’. Keep them informed once you have developed direct contacts with commanders and specialists.
- ◆ Military officers may object to civilians who “insist on dealing exclusively with the commander, colonel, brigadier, two-star, etc.” Unimpeded access to senior officers is a diminishing phenomenon in some militaries. Expect to work through CIMIC/CA officers and established liaison structures.
- ◆ Develop and maintain the trust of your military counterparts. If difficulties arise, try to resolve these within the framework of the established relationship.
- ◆ If necessary, seek review of military decisions through the appropriate military “chain of command”.
- ◆ Remember that a soldier works to fulfil the commander’s mission. This is the soldier’s formal motivation when interacting with others, including dealings with UNHCR staff and counterparts.

- ◆ Finally, bring misconduct to the attention of your supervisor. Disciplinary issues are taken very seriously in most military forces. This is particularly true in highly visible international operations.

Communication

23. Appropriate communication channels should be established between yourself and your military counterparts. Make the effort to meet the most senior military officer responsible for your mission area. You should make the military familiar with UNHCR's mandate, global objectives and current operations, and any concerns in dealing with the military.

You should also try to determine:

- Who are your military counterparts with complementary responsibilities?
- Who within the military do you need to meet and brief?
- At what level of the military organization are decisions made?
- What coordination mechanisms have been established by the humanitarian agencies and NGO's, military, national authorities and others?
- Are there any applicable guidelines or Standard Operating Procedures (SOPs) for UN humanitarian coordination and the military? If so, find out how they are applied locally.
- What formal and informal meetings need to be conducted between UNHCR and the military?

Information sharing

24. Information sharing may be critical to the safety and security of refugees, returnees, UN staff and the overall relief effort. It enables you to properly assess the risks associated with carrying out particular activities, and of course may help avoid any misunderstandings between the military and humanitarian actors. Military forces are careful in their management of information, particularly if its release compromises operational security.

25. It may not always be possible for you to gain free access to information which you consider relevant. Unless a military document is specifically listed as UNCLASSIFIED and authorized for public release, its distribution is selective and may only be provided on a 'need-to-know' basis. In such cases, request sanitized versions of the classified document.

When deployed, contact the UNHCR Military Liaison Officer where appropriate.

26. Sometimes it may be helpful to ask the military to "tell me what you can't tell me" to better define the limits of information sharing. From the humanitarian side, you need to be tactful and discreet when deciding what information you should share, and what should remain confidential to those who receive it. Strict guidance¹ would be provided by the most senior UNHCR officer, but as a general rule **it is prohibited to share:**

- i. information gained during protection interviews, especially specific information from individual protection cases; and
- ii. information that has direct military utility, for example information on the movements of other military elements. (*Note: this does not remove a requirement to share information related to staff security and safety within the UN security system as in some instances this information will need to be shared with the appropriate security forces).*

It may be appropriate to share:

- i. UNHCR's work in the field and the objectives you are seeking to achieve;
- ii. information posted in the public domain: press statements and briefings, reliefweb.org, unjlc.org, unhcr.org, etc.;

¹ See UNHCR Confidentiality Guidelines - IOM/71/FOM/68/01 of 24 August 2001.

- iii. local security conditions, population movements and the prevailing humanitarian situation;
- iv. information on humanitarian assistance, transport and distribution activities, conditions of airfields; and
- v. general estimates about the scope of the emergency.

Briefings

27. Briefing military forces will provide a good opportunity to establish contact. Explain UNHCR's role and responsibilities, and articulate your needs and expectations. Briefings will also allow you to become familiar with key military decision-makers as well as technical counterparts. Briefing sessions will help to build mutual understanding and create confidence.

28. Prepare your briefing well. Be clear, well structured and concise. Use schematic maps and UNHCR handouts to support your presentation. A briefing to military forces should cover:

- role, mandate and relationship to other UN agencies and humanitarian actors;
 - mission objectives with respect to the specific operation; UNHCR's protection goals should always be emphasized;
 - humanitarian principles and operational norms;
 - humanitarian coordination structures;
 - operating parameters, what we can and cannot do, and why;
 - caseload, magnitude of operations, volume of relief items;
 - UNHCR organization-chart in the region, sub-office boundaries, etc.;
 - counterparts and implementing partners;
 - skills and aptitude that UNHCR brings to a mission area. For example:
- i. Expertise in refugee law and related issues
 - ii. Local knowledge
 - iii. Long-term involvement in the region
 - iv. Network of counterparts in government and local authorities
 - v. Capacity and flexibility in responses

Negotiation

29. When negotiating with the military, the following points should be considered:

- Ask yourself what needs to be achieved and under what conditions (both negotiable and non-negotiable)?
- Ask yourself where, when, why, by whom?
- Agree on action points and communicate any subsequent changes.
- Write down agreed issues, share and compare notes. This approach will save time, resources and reduce misunderstanding. In an uncertain situation, these may be important for your security.
- When negotiating with military personnel make them aware of your value to their mission; this may even be derived from the initiative you propose.
- Inform all aspects of the relief operation that UNHCR, implementing partners or beneficiaries will implement, and where military forces could assist.
- Ensure understanding on functional areas of responsibility. Different agencies and military forces have different definitions of operations, logistics, medical and engineering needs.
- Exceptionally - if necessary and appropriate - negotiate Standard Operating Procedures with military forces that define responsibilities and activities.

- For these arrangements to be fully effective, you must seek endorsement at the highest levels within the military command structure and UNHCR.

Requesting military assistance

30. The UN humanitarian community has agreed to guidelines for use of military assets in providing assistance. (There are separate guidelines for natural disasters and the complex emergencies). The following factors should be considered when requesting military assistance:

- Are they the option of last resort; indispensable and appropriate?
- Is the requested military or civil defence element capable of the task?
- For how long will they be required in order to complete the task?
- How will a transition back to civilian responsibility be achieved?
- Can they be deployed without weapons or additional security forces?
- Are the military force offering assets or support party to the conflict?
- How will this association likely impact the security of UNHCR personnel and other humanitarian workers?
- How will this association likely impact the perceptions of humanitarian neutrality and impartiality?
- What are the likely consequences for the beneficiaries, other humanitarian actors, and humanitarian operations in the medium to long term?
- What control and coordination arrangements will be required?

Remember, if your office requests and/or makes use of any military assets you should duly inform the Humanitarian Coordinator through the UN CMCoord structure.

31. A military operation is focussed on achieving the stated objective, the “end-state”, completing the mission, and “going home”. Part of their mission will be to hand-over certain functions to another

military force, a government structure and civilian authorities. The military plans for this transition, establishes criteria and monitors developments towards such a hand-over. Try to seek opportunities to contribute to the development of military transition plans, and ensure their planning assumptions remain valid.

Humanitarian–military interface mechanisms

Military coordination mechanisms

32. Military coordination mechanisms can vary according to varying doctrines in use. There are two very broad approaches by the military in their interface structures with civilian actors:

- **Specialised structures and staff**, leaving the “warfighters” (and most commanders) to concentrate on the primary peace and security function.
- **Mainstreamed interface** where all levels of the military command structure will be required to be able to deal with civilian actors, including the humanitarian community.

33. Despite this broad doctrinal difference, in most emergencies where the military is deployed in any significant strength they will establish a contact point to assist their interface with the surrounding civilian environment. This can have various titles, but most commonly it is called a **Civil Military Operations Centre (CMOC)**. CMOCs are often located outside military compounds to facilitate access and the exchange of information between military personnel, civilian organizations, local authorities and the local population.

Specialised humanitarian staff positions

34. Various UN organisations deploy staff to fulfil functions that are specifically related to the interface with the military. The main types of positions are as follows:

- **UN CMCoord Officers.** The United Nations Office for the Coordination of Humanitarian Affairs (OCHA) can deploy UN CMCoord Officers to some humanitarian emergencies to provide a UN Humanitarian or Resident Coordinator specialized advice and liaison.
 - **UNHCR Military Liaison Officers.** There may be occasions, particularly those where there is a very large military presence and a significant humanitarian operation, when the UNHCR may assign a staff member to focus specifically on civil-military interaction. The UNHCR term for these individuals is *Military Liaison Officers* (MLOs).
 - World Food Programme (WFP), UNICEF and other agencies may deploy Military Liaison Officers.
- i. **CIMIC and CA officers** are military and sometimes national civilian staff attached to military forces. They can be trained in the workings of international and non-governmental humanitarian and development agencies. The task of CIMIC officers is to provide the appropriate - and often the direct - conduit to their respective military commander and military components, which aims to support humanitarian action (e.g. engineering, logistics and medical).
 - ii. **CA officers** may also interact with government representatives and local administrators. Their role relates to the broader socio-political environment, but their functions sometimes overlap with the task of CIMIC officers and Political Affairs Officers.

In addition to the UN, other humanitarian entities, e.g. the Red Cross family and some NGOs appoint individuals to specifically deal with the military.

Specialised military staff positions

35. Various military organizations deploy officers whose primary task it is to interface with non-military, including humanitarian, actors. The main types of positions are as follows:

- ◆ **UN Peacekeeping:**
- i. **Civil-Military Liaison Officers.** UN military staffs at the HQ of a peace-keeping mission and at sector HQ can have military officers who are titled Civil Military Liaison Officers (CMLOs).
- ii. **National Contingents.** At the level of national contingents in UN peace-keeping, national doctrine is often applied to the titles of individual staff.
- ◆ **Civil-Military Cooperation (CIMIC) Officers and Civil Affairs (CA) Officers:**

Use of military escorts

36. As a general rule,² UN humanitarian convoys travel without military or police escorts, but when working within a known area of armed conflict exceptions may need to be made. Before commencing any military escorted convoy, all involved personnel must be fully briefed of the convoy rules and must strictly adhere to command and communications procedures. If armed convoy escorts are requested, then the relationship between UNHCR and the military force must be based on the following principles:

- the primacy of the organization in humanitarian work;
- the primacy of humanitarian principles and criteria in deciding on a convoy with a military escort;
- the humanitarian identity of the convoy; and
- that armed personnel remain in separate vehicles and that humanitarian vehicles are clearly marked as such.

Table 1 – Key Emergency Indicators

Crude Mortality rate (CMR)	Normal rate among a settled population Emergency program under control Emergency program in serious trouble Emergency: out of control Major catastrophe	0.3 to 0.5/10,000/day <1/10,000/day >1/10,000/day >2/10,000/day >5/10,000/day
Mortality rate among children under 5 years old (U5MR)	Normal rate among a settled population Emergency program under control Emergency program in serious trouble Emergency: out of control	1.0/10,000/day <2.0/10,000/day >2.0/10,000/day >4.0/10,000/day
Clean water	Minimum survival allocation Minimum maintenance allocation	7 liters/person/day 15-20 liters/person/day
Food	Minimum food energy requirement for a population totally dependant on food aid	2,100 kcal/person/day
Nutrition	Emergency level: or	>15% of the population under five years old below 80% weight for height >10% of the population under five years old below 80% weight for height together with aggravating factors e.g. epidemic of measles, crude mortality rate > 1/10,000/day
Measles	Any reported cases. 10% or more unimmunized in the 6 months to 5 years age group	
Respiratory infections	Any pattern of severe cases	
Diarrhoea	Any pattern of severe cases	
Appropriate shelter	Protection from wind, rain, freezing temperatures, and direct sunlight are minimum requirements Minimum shelter area 3.5 sq. m/person Minimum total site area 30.0 sq. m/person	
Sanitation	Lack of organized excreta and waste disposal. Less than 1 latrine cubicle per 100 persons	

Table 2 – Public Health Emergency: Major Killers

Measles Diarrhoeal Diseases Acute respiratory infection (ARI) Malaria Malnutrition	A significant increase of incidence of these conditions should prompt an immediate response (or the reporting of just one case of measles)
---	--

Table 3 – Common Health Problems

Disease	Major contributing factors	Preventive measures
Diarrhoeal diseases	Overcrowding Contamination of water and food Lack of hygiene	<ul style="list-style-type: none"> adequate living space public health education distribution of soap good personal and food hygiene safe water supply and sanitation
Measles	Overcrowding Low vaccination coverage	<ul style="list-style-type: none"> minimum living space standards as defined in chapter on site planning immunization of children with distribution of Vitamin A. Immunization from 6 months up to 15 years (rather than the more usual 5 years) is recommended because of the increased risks from living conditions
Acute respiratory infections	Poor housing Lack of blankets and clothing Smoke in living area	<ul style="list-style-type: none"> minimum living space standards and proper shelter, adequate clothing, sufficient blankets
Malaria	New environment with a strain to which the refugees are not immune Stagnant water which becomes a breeding area for mosquitoes	<ul style="list-style-type: none"> destroying mosquito breeding places, larvae and adult mosquitoes by spraying. However the success of vector control is dependent on particular mosquito habits and local experts must be consulted provision of mosquito nets drug prophylaxis (e.g. pregnant women and young children according to national protocols)
Meningococcal meningitis	Overcrowding in areas where disease is endemic (often has local seasonal pattern)	<ul style="list-style-type: none"> minimum living space standards immunization only after expert advice when surveys suggest necessity
Tuberculosis	Overcrowding Malnutrition High HIV prevalence	<ul style="list-style-type: none"> minimum living space standards (but where it is endemic it will remain a problem) immunization
Typhoid	Overcrowding Poor personal hygiene Contaminated water supply Inadequate sanitation	<ul style="list-style-type: none"> minimum living space standards safe water, proper sanitation good personal, food and public hygiene and public health education WHO does not recommend vaccination as it offers only low, short-term individual protection and little or no protection against the spread of the disease
Worms especially hookworms	Overcrowding Poor sanitation	<ul style="list-style-type: none"> minimum living space standards proper sanitation wearing shoes good personal hygiene
Scabies ¹	Overcrowding Poor personal hygiene	<ul style="list-style-type: none"> minimum living space standards enough water and soap for washing
Xerophthalmia Vitamin A deficiency	Inadequate diet Following acute prolonged infections, measles and diarrhoea	<ul style="list-style-type: none"> adequate dietary intake of vitamin A If not available, provide vitamin A fortified food If this is not possible, vitamin A supplements immunization against measles. Systematic prophylaxis for children, every 4 - 6 months
Anaemia	Malaria, hookworm, poor absorption or insufficient intake of iron and folate	<ul style="list-style-type: none"> prevention/treatment of contributory disease correction of diet including food fortification
Tetanus	Injuries to unimmunized population Poor obstetrical practice causes neo-natal tetanus	<ul style="list-style-type: none"> good first aid immunization of pregnant women and subsequent general immunization within EPI training of midwives and clean ligatures scissors, razors, etc.
Hepatitis	Lack of hygiene Contamination of food and water	<ul style="list-style-type: none"> safe water supply effective sanitation safe blood transfusions
STD's/HIV	Loss of social organization Poor transfusion practices Lack of information	<ul style="list-style-type: none"> test syphilis during pregnancy test all blood before transfusion ensure adherence to universal precautions health education availability of condoms treat partners

¹ Scabies: skin disease caused by burrowing mites

Table 4 – Screening of New Arrivals - Reception Activities

a) HEALTH SCREENING	
Nutritional screening	Children 1 to under 5 years: Measure the mid-upper arm circumference (MUAC). Any children with MUAC below 12.5 cm should be immediately referred to health or nutrition services for weighing and measuring and for nutritional assistance if required.
Measles immunization	Children aged 6 months to 12 (or even 15) years: Immunize entire group and issue «Road to Health» or other immunization record card. Note: It is often impractical to vaccinate at the same time as screening. However screening could be used to evaluate the vaccination coverage.
Vitamin A prophylaxis	Given along with measles vaccine, but should not delay measles vaccination if vitamin A is not available.
Basic curative care	As required: On-site first-line care for dehydration, respiratory infections, presumed malaria, trauma, and other life threatening conditions. Referral to existing health care facilities.
b) DEMOGRAPHIC SCREENING	
Population estimation	Everyone: Estimate total population broken down by sex and age (0-4, 5-14, 15-44, and 44 years and over) Estimate numbers of vulnerable persons such as children up to 5 years old, pregnant/lactating women, handicapped, female heads of households, single women, and unaccompanied minors.

Table 5 – Approximate Staffing Levels for Refugee Health and Sanitation Services for a Population of 10-20,000

Community Health Worker	10-20
Traditional Birth Attendant	6-10
Public Health Nurse	1
Clinic Nurses Midwives	3-4
Doctors/Medical Assistants	1-3
Pharmacy Attendant	1
Laboratory Technician	1
Dressers/Assistants	10
Sanitarians	2-4
Sanitation Assistants	20

Table 6 – Site Planning Figures for Emergencies

RESOURCE	HOW MUCH YOU WILL NEED
Land	30 - 45 m ² per person
Sheltered space (tents, or other structures)	3.5 m ² per person
Fire break space	A clear area between shelters 50 m wide should be provided for every 300 m of built-up area. A minimum of 1-1.5 m should be provided between guy-ropes of neighboring tents on all sides
Roads and walkways	20-25% of entire site
Open space and public facilities	15-20% of entire site
Environmental sanitation	1 latrine seat per 20 people or ideally 1 per family sited not farther than 50 m from user accommodations and not nearer than 6 m. 1 x 100 liter refuse bin per 50 people 1 wheelbarrow per 500 people 1 communal refuse pit (2 m x 5 m x 2 m) per 500 people
Water	15 - 20 liters per person per day of clean water
Tap stands	1 tap per 200 persons sited not farther than 100 m from user accommodations
Warehouse space	For food grains in bags, stacked 6 m high allow 1.2 m ² of floor space per tonne
Food	2,100 kcal/person/day This will require approximately 36 metric tonnes/10,000 people/ week of food assuming the following daily ration: 350-400 g/person/day of staple cereal 20-40 g/person/day of an energy rich food (oil/fat) 50 g/person/day of a protein rich food (legumes)

Table 7 – The Size of Things

Commodity volume per ton (m³/1,000kg)	Approximate	Standard package stacking height	Typical maximum
Water	1	none	n/a
Food grains/beans	2	50 kg bag	20-40 bags
Flour and blended foods	2	25 kg bag	20-30 bags
DSM in bags	2.4	25 kg bag	20-30 bags
DSM in tins inside cartons	4	20 kg/carton 4 tins/carton	8 individual cartons or 20 if palletized
Edible oil in tins inside cartons	2	25 kg/carton 6 tins per carton	8 individual cartons or 20 if palletized
Oil in drums	1.4	200 liter drum	2 drums upright with wood between the rims or 3 drums on their sides
ORS	2.4	35 kg carton	3-4 m
Mixed drugs	3.5	45 kg carton	3-4 m
Clinic equipment and teaching aids	4.5	35-50 kg carton	3-4 m
Kitchen utensils	5	35-40 kg cartons	3-4 m
Tents: Ridge canvas	5	80-100kg/unit	4.5 m *
Light-weight tent	10	41kg/unit	3m *
Compressed blankets	4.5	70 units/bale 85 kg/bale	4.5 m *
Loose blankets	9	unit	3-4 m

* where equipment for stacking allows

Table 8 – Capacities and Characteristics of Various Aircraft

Aircraft make or type	Volume* capacity in m ³	Weight* capacity in kg	Required* runway in m	Notes
Antonov AN-12	97	20,000	1,800	
Antonov AN-124	900	120,000	3,000	
Boeing B.707/320C	165	36,000	2,100	
Boeing B.747	460	100,000	3,000	
DC-3	21	3,000	1,200	
DC-6	80	11,000	1,500	
DC.8/63F	302	44,000	2, 300	"stretch" version
DC.10/30F	412	66,000	2,500	
Fokker F.27	65	5,000	1,200	
Hercules L.100-30	120	15,000	1,400	Ramp for trucks, can land on earth/grass airstrips
Ilyushin IL-76	180	40	1,700	
Pilatus Porter	3	950	120	Small door
Skyvan	22	2,100	500	Ramp: can take Land Rover
Transall	140	17,000	1,000	Ramp for trucks
Twin Otter	12.4	1,800	220	Small door

**Note that the minimum length of runway required and the maximum load capacity both depend on the altitude of the airport and the temperature. Capacity is reduced for long distances as more fuel must be carried. Carrying capacity will also vary with the actual configuration of the aircraft.*

Table 9 – Capacities of Various Surface Transport Means

Carrier Type	volume capacity in m ³	weight capacity in kg
Standard railway car	52	30,000
Standard sea/land container – 20ft/ 6.1 m	30	18,000
Standard sea/land container – 40ft/12.2 m	65	26,000
Large lorry and trailer	Varies	20-30,000
Large articulated lorry	Varies	30-40,000
Medium lorry	Varies	5-8,000
Long wheel base Landrover or pickup	Varies	1,000
Typical water tanker	8	8,000
Hand drawn cart	Varies	300
Camel	Varies	250
Donkey	Varies	100
Bicycle	Varies	100

Memorandum of Understanding between
UNHCR and WFP (2002)

**Memorandum of Understanding Between
the Office of the United Nations High
Commissioner for Refugees (UNHCR)
and
the World Food Programme (WFP)**

1. INTRODUCTION

1.1 Even before the conclusion of the 1985 Memorandum of Understanding (MOU), UNHCR and WFP had established a very close partnership in the service of refugees. This was significantly strengthened with the new working arrangements introduced progressively from the start of 1992. A revised MOU, reflecting experience with these new arrangements, became effective at the start of 1994 and was further revised in 1997. This 2002 revision reflects the experience in implementing the provisions of the second revision.

1.2 The MOU sets out its objectives and scope, and establishes the division of responsibility and arrangements for, *inter alia*, needs assessment; resource mobilization; logistics; appeals; monitoring and evaluation; nutritional surveillance, reporting, and coordination. The last section describes the general conditions governing the MOU.

1.3 By virtue of its Statute (General Assembly resolution 428 (V) of 14 December 1950), the role of UNHCR is to provide international protection to refugees and to seek durable solutions to refugee problems. As regards UNHCR's assistance activities, the basic provisions of the Statute were expanded by the General Assembly in its resolution 832 (IX) of 21 October 1954. Subsequent resolutions of the General Assembly, the Economic and Social Council and the Executive Committee of UNHCR have called on the Office, in the context of its basic mandate, to protect and assist other groups of persons regarded as falling within the competence of UNHCR. For the purpose of this MOU, the following categories of persons are of concern to UNHCR:

- **Refugees**

UNHCR is mandated to provide international protection and humanitarian assistance to refugees as well as to promote durable solutions to their problems.

- **Asylum seekers**

The term *asylum seeker*, in the context of this MOU, refers to persons who are part of large-scale influxes of mixed groups, the nature of which makes individual refugee status determination impractical. UNHCR is mandated to promote the right of all persons, whether individually or as part of mass movements, to seek and to avail themselves of asylum, until a solution is found and in accordance with basic humanitarian standards of treatment.

- **Returnees**

UNHCR's mandate concerning returning refugees, based on its legitimate concern for the consequences of return, includes substantive involvement to ensure that return takes place in conditions of safety and dignity and to provide assistance to returnees in their country of origin with an aim towards their full reintegration. UNHCR's activities in favour of returnees are limited in time and aimed at ensuring the sustainability of returns, and vary according to each operation. UNHCR's involvement may be determined by specific tripartite or bilateral agreements with respective countries that outline the framework of voluntary repatriation operations.

- **Internally displaced persons (IDPs)**

UNHCR's involvement with IDPs is selective, applying to persons displaced internally for reasons that would make them of concern to UNHCR had they crossed an international boundary. In line with relevant General Assembly resolutions, UNHCR's involve-

ment in any IDP situation is based on a specific request from the Secretary-General or a competent principal organ of the United Nations, the consent of the State or other entities concerned, and the availability of adequate resources.

1.4. WFP is mandated to feed the hungry poor, regardless of their status. As the food aid arm of the United Nations, WFP uses food to save lives, alleviate hunger and enable poor, food-insecure people to make investments that will help them in the longer term. This entails assessing the needs of targeted populations, planning and implementing appropriate activities, organizing and managing logistics, monitoring impact and working with a range of partners. Refugees, asylum seekers, returnees and IDPs, especially women and children, are important categories of food-insecure people of particular concern to WFP, given the impact of displacement on food security.

1.5 Under the framework of this MOU, UNHCR and WFP will work together, in partnership, where their mandates overlap, to address the food security and related needs of refugees and others of concern to UNHCR.

2. OBJECTIVES AND SCOPE

1.1 The ultimate goal of the partnership between UNHCR and WFP is to ensure that food security and related needs of the refugees and returnees that UNHCR is mandated to protect and assist are adequately addressed. Food security is defined as access by all people at all times to enough food needed for an active and healthy life. On the basis of the above principle, and through the timely provision of the right quantity of the right food and of non-food items relevant to the safe and effective use of the food ration provided, UNHCR and WFP seek to contribute to:

- the restoration and/or maintenance of a sound nutritional status through a food basket that meets the assessed requirements of the different population groups, is nutritionally balanced and is culturally acceptable, as jointly agreed upon and specified in Joint Plans of Action (see article 3.2); and
- the promotion of the highest possible level of self-reliance among the beneficiaries, through the implementation of appropriate programmes to develop food production or income-generation, which will facilitate a progressive shift from general relief food distribution towards more targeted assistance and sustainable development-oriented activities.

2.2 UNHCR and WFP are committed to ensuring that food aid and non-food items affecting health and food security are targeted at the household level and reach the most vulnerable, with their delivery respecting the guiding principles of humanitarian action, especially accountability and transparency. WFP and UNHCR will take measures to ensure that, to the extent possible and taking into account the demographic profile of the beneficiary population, at least 80 per cent of food inputs are directly managed by the adult female in the household. They will also work together to implement strategies to involve the beneficiary community, and particularly women, in all aspects of the management of food aid. Women should be encouraged to participate in decision-making bodies and should represent at least 50 per cent of the members in refugee committees.

2.3 UNHCR and WFP have a legitimate interest in the creation of suitable conditions for durable solutions. The promotion of self-reliance, although not a durable solution on its own, is one of the essential elements for lasting solutions. The achievement of self-reliance implies a whole range of activities aimed at socio-economic empowerment of refugees and returnees, as part of a local community. Given the need for self-reliance to

be featured within a larger context of local development, WFP and UNHCR will make efforts to link self-reliance and reintegration activities to the longer-term recovery and development plans of governments and other actors.

2.4 The MOU is a management tool that contributes to the achievement of these objectives by recognizing the mandates of each organization and defining clearly the responsibilities and arrangements for cooperation between UNHCR and WFP. It does so in a way that maximizes the strengths of each organization and builds on their comparative advantages in arrangements for cooperation that provide both added value for the beneficiaries and the discharge of these mandates and responsibilities.

2.5 The MOU covers cooperation in the provision of food aid and related non-food items to refugees (including asylum seekers), returnees and, in specific situations (as defined in article 1.3) to IDPs. It applies when the number of people in need of food assistance in a given country is at least 5,000, unless otherwise determined and agreed upon by WFP and UNHCR on a case-by-case basis. Where the beneficiaries are located in developed countries,¹ the provisions of the MOU will still apply, provided that the availability of the necessary donor resources is not at the expense of WFP's relief operations in developing countries. This will be determined by WFP on a case-by-case basis.

2.6 UNHCR and WFP will separately meet the food needs of persons of their concern that lie outside the scope of the MOU as defined above, as well as the needs of any persons who, while falling within the MOU's scope, have been excluded by a situation-specific agreement.

3. PLANNING AND NEEDS ASSESSMENT

Contingency planning

3.1 UNHCR and WFP will establish early-warning systems, undertake contingency planning and maintain contingency plans for countries where this is deemed appropriate. Each will seek to ensure joint participation of others concerned in the process, and share relevant contingency plans where these can not be developed jointly.

Plan of Action

3.2 At the field level, a Joint Plan of Action setting out the agreed-upon objectives and implementation arrangements for operations under this MOU shall be developed at the onset of each joint operation and updated regularly, at least annually.

Registration/verification

3.3 The host government is primarily responsible for determining the number of refugees. In the context of its protection mandate, UNHCR will fully support the government in processes relating to the determination of refugee status and the registration of and provision of identity cards to refugees. WFP and UNHCR will jointly assess the number of refugees/returnees eligible for food assistance, in consultation with the government concerned. An accurate identification of beneficiaries and a sound assessment of their needs are essential for the mobilization and efficient use of the resources made available to both organizations.

¹ Countries other than those listed in the OECD/DAC Annual Report as aid recipient countries that fall below the threshold for World Bank loan eligibility.

3.4 In normal circumstances registration will take place within three months of the start of a major influx. The size and nature of the influx will determine the type of registration mechanism to be used. UNHCR will work together with the government to put in place local arrangements to register, to the extent possible, any new arrivals, departures, births, changes in marital status and deaths. This will ensure that changes in the family size of the beneficiaries of food items are followed by a corresponding change in family rations. Where a satisfactory registration has not been possible within three months, UNHCR and WFP will jointly determine the number of beneficiaries in need of food assistance and estimate the demographic breakdown of the population, in consultation with the host government. Beneficiary numbers and the refugee food security situation will be jointly updated regularly, at least annually, unless otherwise agreed upon by the country offices. The timing of the registration, verification or revalidation exercise will be agreed upon at the country level in the Joint Plan of Action.

3.5 UNHCR will fully involve WFP in the planning and execution of refugee enumeration, registration and verification exercises for actual or potential beneficiaries of food aid and related non-food items. Operational partners and representatives of donor governments should be closely associated with this and other aspects of enumeration and registration. Should there be any disagreement between the respective country offices on the number of beneficiaries to use in the absence of a satisfactory initial registration, the matter shall be referred to the respective regional bureaux for resolution. Pending such resolution, and in consultation with the host government, WFP will provide food to the number of beneficiaries it estimates to be in need of assistance.

Needs assessment

3.6 In consultation with the relevant government authorities, donor representatives, operational partners, beneficiaries, and experts as appropriate, UNHCR and WFP will jointly assess the overall food aid and related non-food requirements. Both agencies will agree on the modalities of food assistance, the composition of the food basket, ration size, duration of assistance, and related non-food inputs. Special consideration will be given to the needs and views of women, children and vulnerable groups. Needs in different settlements may be established individually, if so jointly agreed upon at country level. The proposed food and non-food assistance programmes will take into account all relevant factors, including the socio-economic and nutritional status of the beneficiaries, cultural practices, overall food availability, prospects for self-reliance, availability of cooking fuels and milling facilities, and environmental impact. Energy requirements for cooking and corresponding energy supply options and quantities should be carefully assessed in each situation.

3.7 In a major new emergency, the initial assessment to determine the number of beneficiaries and the most urgent food and non-food needs will normally be carried out within the framework of the emergency response being mobilized by both agencies. This would involve the participation of emergency response teams from UNHCR, WFP and prospective operational partners, as appropriate.

3.8 In ongoing operations, a jointly led review of food and other relief needs will normally take the form of a periodic joint assessment mission (JAM), undertaken by the country offices and involving outside staff, as appropriate. The composition of the mission will be mutually agreed upon. When a consultancy is required to assess the beneficiaries' socio-economic or health situation — such as their household food economy,

self-reliance potential, health behaviours, underlying causes of malnutrition and gender aspects of distribution modalities — its cost will be shared by both organizations. The participation, as full mission members, of selected donor and operational partner representatives will be encouraged so as to promote donor support for the mission's findings. Jointly established assessment mission guidelines will be developed. The JAM report will be finalized within a month of the completion of the mission, and circulated immediately thereafter.

3.9 Should either the UNHCR or the WFP country office consider that developments since the last needs assessment warrant a change in the agreed-upon ration or number of beneficiaries, the other organization shall be informed of this immediately. The implications of these developments will be reviewed jointly and a course of action agreed upon. Should the country offices not agree on a course of action, the issue shall be referred to the respective regional bureaux for appropriate and immediate resolution.

3.10 UNHCR and WFP will also consider the food security situation of communities surrounding refugee camps and of individuals and families hosting refugees, and will address these needs as appropriate.

Durable solutions

3.11 In accordance with their respective mandates, UNHCR and WFP will promote the use of assistance to encourage and build the self-reliance of beneficiaries. This will include programming food and non-food aid to support asset-building, training, income-generation and other self-reliance activities. With the increase in self-reliance, UNHCR and WFP will carefully plan for the reduction of assistance in consultation with the government, non-governmental organization (NGO) partners and beneficiaries. Possibilities for allocating agricultural land for use by refugees will be pursued with host governments, whenever possible.

3.12 WFP will be closely associated with the planning and implementation of repatriation operations, particularly with regard to timing, security and other components that would affect food aid planning and implementation. Decisions on the use of WFP food will be taken jointly. If a repatriation commission is established by the governments concerned, UNHCR will request WFP's participation (as an observer or as otherwise agreed) in its meetings.

3.13 UNHCR, in consultation with WFP and other relevant partners, will develop reintegration strategies that help integrate refugees into their former or new communities, keeping in mind the broader food security situation of such communities as well as government policies and sensitivity. Normally, assistance provided to communities or areas is likely to be more appropriate than that provided to individuals. UNHCR and WFP will make efforts to link UNHCR's short-term reintegration programmes to longer-term development plans/programmes of the region, including those of WFP and other development actors.

Nutrition

3.14 The indicative average energy and protein requirements for human beings established by the Food and Agriculture Organization (FAO) and the World Health Organization (WHO) (2,100 kcal per person per day, with 10–12 per cent coming from protein) will be maintained as the initial planning figure to apply at the onset of any

emergency situation. This figure will be adjusted as soon as possible to take into account the temperature in the area and the demographic composition, health, nutritional status and physical activity levels of the beneficiaries, as specified in the Joint WFP/UNHCR/UNICEF/WHO Guidelines for Estimating Food and Nutritional Needs in Emergencies. Other factors, such as the ability of the population to provide its own food and those factors specified in article 3.6, will also be taken into consideration when estimating the food aid needs of the beneficiaries. Agreed-upon nutritional guidelines will be used to assess the food needs for both the general and any selective feeding programmes that may be necessary.

3.15 UNHCR, through its implementing partners (health agencies), is responsible for monitoring the nutritional status of refugees and for the implementation of any selective feeding programmes that may be necessary. UNHCR will organize regular nutritional surveys and maintain an effective surveillance system for monitoring the nutritional status of refugee populations. UNHCR will ensure the full involvement and the effective participation of WFP staff in both the planning and the execution of the nutritional surveys, and in the analysis or interpretation and dissemination of the results. The nutritional status of the refugees will also be reviewed as part of a joint assessment mission. The decision to implement selective feeding programmes will be taken jointly by UNHCR and WFP on the basis of agreed-upon guidelines (WFP/UNHCR Selective Feeding Guidelines). UNHCR will keep WFP informed regularly on the implementation of such programmes. WFP, on the basis of the evaluation of its technical staff at the country and regional levels, may recommend to UNHCR specific actions in the nutrition field.

HIV/AIDS prevention

3.16 The HIV/AIDS pandemic affects the socio-economic and security situation of the beneficiaries of this MOU. In its implementation, both agencies will seize every opportunity to address the impact of HIV/AIDS on the populations of mutual concern and to promote prevention and care activities.

4. RESPONSIBILITIES FOR RESOURCE MOBILIZATION AND MILLING

4.1 WFP is responsible for mobilizing the following commodities, whether for general or selective feeding programmes: cereals; edible oils and fats; pulses (or other sources of protein when appropriate and jointly agreed upon); blended foods; salt; sugar; and high-energy biscuits. Where beneficiaries are totally dependent on food aid, WFP will ensure the provision of blended foods or other fortified commodities in order to contribute to preventing or correcting micronutrient deficiencies.

4.2 UNHCR is responsible for mobilizing complementary food commodities when recommended by JAMs or on the basis of specific health/nutritional and/or social assessments, particularly when refugees have limited access to fresh food items. These complementary commodities include local fresh foods and therapeutic milk (to be used in selective feeding programmes). UNHCR may mobilize spices and tea, when recommended.

4.3 Within its assistance activities, UNHCR is responsible for ensuring adequate supplies of non-food items and services, in particular those relevant to the safe and effective use of food aid, such as cooking utensils, fuel, water and sanitation, medicines, soap and shelter. UNHCR and WFP should promote nutritionally and environmentally sound practices, and cooking techniques and technologies for saving fuel.

4.4 Furthermore, UNHCR and WFP will facilitate the mobilization of seeds, tools and fertilizers, in cooperation with relevant government bodies and competent United Nations and development cooperation agencies.

4.5 The joint assessment mission will determine the specific food commodities and quantities required. The assessment will also determine whether cereals are to be provided in whole grain or as flour. For practical, nutritional and environmental reasons, it is generally preferable to provide flour in the early stages of an emergency, but such provision may be difficult to sustain in protracted operations. If whole grain is provided, local milling capacity must be available. The ration should include compensation for milling costs (normally between 10 and 20 per cent of the cereals provided), if these costs are borne by the beneficiaries. WFP is responsible for mobilizing the necessary resources for milling and will provide milling facilities for the beneficiaries where feasible. Women will be particularly encouraged to play a key role in the management of the milling services, when appropriate.

4.6 WFP and UNHCR will maintain effective systems for monitoring their commodity pipelines and will keep each other closely and regularly informed, at both the country office and regional bureau levels, of any significant developments. UNHCR and WFP will consult immediately should it become clear that either organization may not be able to ensure the timely arrival (including milling) of food and non-food commodities under their responsibility, whether because of unavailability of resources, delayed deliveries, logistical problems, or other constraints. Systems should be put in place to ensure that such information is available at least three months in advance. As a consequence, appropriate remedial action will be taken jointly, such as the issuing of joint donor appeals, press statements, temporary modifications of the food basket composition to maintain the agreed-upon energy (kcal) level and any other action agreed upon at the field and regional levels.

5. RESPONSIBILITIES FOR FOOD DELIVERY AND DISTRIBUTION

1.1 WFP is responsible for the timely transport to agreed-upon extended delivery points (EDPs) of sufficient quantities of those food commodities it is responsible for mobilizing (specified in article 4.1). WFP is also responsible for storing these commodities at the EDPs, and for managing the latter. WFP will keep UNHCR informed of the in-country logistic arrangements made to implement the agreed-upon programme.

1.2 UNHCR is responsible for the timely transport and for the storage of sufficient quantities of those food and non-food commodities it is responsible for mobilizing (specified in article 4.2). Unless otherwise agreed, UNHCR is also responsible for the transportation of WFP food commodities from the EDPs to the final delivery points (FDPs) and for their final distribution to beneficiaries. Responsibility is assumed ex-warehouse (i.e. EDP) or free-on-truck/free-on-rail, taking into consideration practice in the country. UNHCR will keep WFP informed of the logistical arrangements made to implement the agreed-upon programme.

1.3 The location of an EDP is proposed by the country offices, in accordance with agreed-upon Guidelines for Locating EDPs and Operating EDP Storage Facilities, and confirmed by UNHCR and WFP regional bureaux. The location selected should minimize overall costs and maximize management efficiency of the operation as a whole. EDPs should be located where sufficient warehousing space can be made available to ensure regular final distribution and the most efficient possible onward transportation,

thus avoiding the need for further intermediate storage or trans-shipment between the EDP and the distribution location. Management and security considerations are particularly important. The distribution site should also be as close as possible to households, to minimize the burdens and risks to women managing food distribution and/or collecting the food.

1.4 Arrangements for the final distribution of food commodities to beneficiaries are agreed-upon jointly by the government, UNHCR and WFP, in consultation with beneficiaries, particularly women's committees, and in conformity with the established commodity distribution guidelines. These arrangements will respect UNHCR and WFP's policy of ensuring the maximum possible appropriate involvement of the beneficiary community, and of women in particular, in all aspects of distribution. The final distribution of food commodities will be normally the responsibility of an implementing partner of UNHCR (except in those countries selected for the pilot activities mentioned in article 5.8), whose designation shall be jointly agreed upon by UNHCR and WFP. The distribution modalities and the responsibilities of the implementing partner for reporting on the distribution and use of food commodities are the subject of a tripartite agreement among UNHCR, WFP and the implementing partner. Tripartite agreements will be signed in every joint operation. UNHCR is responsible for ensuring, in collaboration with WFP, that implementing arrangements also provide appropriate guidance to beneficiaries on their entitlements, distribution schedules and how to prepare food in a manner that minimizes cooking time and safeguards the food's nutritional content.

1.5 Bearing in mind the broader context in which the food distribution process takes place, and its impact, in particular on the protection situation of the assisted population, the country office of either UNHCR or WFP may, at any moment, request modifications to the pattern of distribution, or stop distribution altogether, if deemed appropriate. Should the country office of either agency disagree with this request, the matter will be submitted to the corresponding regional bureaux of both organizations for final joint decision. Pending this final resolution, the process of food distribution will proceed as previously agreed.

5.6 In targeted feeding programmes such as school feeding and food for work, and in non-camp situations in the country of asylum or in situations where food assistance is targeted to both IDPs and refugees, UNHCR and WFP may agree to transfer the responsibility for distribution to WFP.

5.7 There is no automatic retroactive entitlement when full distribution of the agreed-upon ration has not been possible. The decision on any exceptional retroactive distribution will be made jointly by UNHCR and WFP and will be based on substantive evidence of any negative effects of the reduced ration on refugees' well-being.

5.8 On a pilot basis and for an initial duration of 12 months (per country), WFP will assume, at its own cost, responsibility for the final distribution of the basic food ration in five refugee programmes. The pilot country programmes will be selected jointly by UNHCR and WFP based upon jointly agreed criteria and in consultation with the concerned WFP/UNHCR country teams. For the countries in which WFP will take responsibility for food distribution, WFP and UNHCR will agree on transitional provisions so as to ensure a smooth hand-over of related responsibilities. The pilot activities will be jointly evaluated. The findings of that evaluation and their implications will be the subject of further discussions between UNHCR and WFP.

5.9 UNHCR will maintain its responsibility for distribution of food in selective feeding programmes.

6. RESPONSIBILITIES FOR FUNDING AND APPROACHES TO DONORS

6.1 UNHCR and WFP will each mobilize the cash and other resources necessary for the discharge of their respective responsibilities.

6.2 UNHCR and WFP will ensure that the resource implications for each organization are set out in all approaches to donors and related documentation in a manner that makes these responsibilities and their complementarity clear. Details on country-specific landside transport, storage and handling (LTSH) and distribution costs will be provided. Approaches to donors will be coordinated, and UNHCR will share with WFP in advance the text covering food needs in any appeal to donors. Joint approaches will be made whenever appropriate, both at the start of a new operation and at any time should it appear that the response of donors will not ensure the timely delivery of the necessary relief items.

6.3 UNHCR and WFP will urge donors to pledge commodities and cash for all food requirements under this MOU through WFP. Sole exception will be for the few food items that UNHCR is responsible for mobilizing. WFP will manage all contributions channelled through it, and coordinate and monitor donor pledges and shipments, including bilateral and non-governmental donations, of all commodities, seeking to adjust delivery schedules as necessary. UNHCR will be kept informed accordingly.

6.4 WFP will seek to ensure that bilateral food resources for refugees (and asylum seekers), returnees and IDPs falling under this agreement, whether channelled through WFP or not, are accompanied by the full cash resources needed to cover LTSH and other related support costs.

6.5 UNHCR will support WFP's specific approaches to donors to provide cash for local, regional or international purchase, so as to ensure that the needs of beneficiaries are met in the most timely and cost-effective manner possible. UNHCR will also support WFP's general approaches to donors for cash contributions to bring the Immediate Response Account (IRA) up to, and maintain it at, the approved level, and for contributions to any similar fund, so that WFP can respond swiftly to new emergency food needs.

7. MONITORING, REPORTING AND EVALUATION

7.1 UNHCR and WFP are both responsible for operational reporting and ongoing monitoring. They will establish an effective monitoring and reporting system for each operation under this MOU, with special attention given to gender-specific quantitative and qualitative data on the socio-economic status of beneficiaries. The agreed-upon distribution of responsibilities for monitoring activities will be specified in the Joint Plan of Action developed in each operation under this MOU. The responsibilities of the government or any other implementing partner entrusted with the distribution of WFP food will be set out in the tripartite agreement (referred to in article 5.5) in a manner that allows effective programme management and meets WFP's and UNHCR's responsibilities to donors. This agreement will require the partner entrusted with distribution to report directly to both WFP and UNHCR on the distribution and use of WFP food. UNHCR and WFP field staff will undertake periodic joint monitoring activities at the food distribution sites (which includes food basket monitoring activities) and at the household level (which includes post-distribution monitoring of the end use of the dis-

tributed commodities). The capacity of refugees and local communities to contribute to monitoring and evaluation of projects should be taken into account.

7.2 UNHCR and WFP will seek to have multilateral donors accept the standard reports and documentation provided to their Executive Committee and Executive Board, respectively, as fulfilment of reporting requirements, instead of requiring donor-specific reporting.

7.3. The evaluation services of UNHCR and WFP will organize joint evaluations as appropriate, taking into account the scale and complexity of operations covered by the MOU. When an evaluation of a joint operation is organized by one organization, the other shall be informed and invited to participate.

8. COORDINATION

8.1 Close cooperation and regular exchange of information between UNHCR and WFP at the field level are essential. This should also enable the resolution of existing and potential problems without referring them to Headquarters or to the regional bureaux. Focal points or liaison officers will be appointed in both UNHCR and WFP field offices to deal with operational matters covered by the MOU.

8.2 The UNHCR and WFP country offices, in liaison with the relevant government authorities as appropriate, will establish and maintain food aid coordinating mechanisms that allow regular consultation and exchange of information with multilateral and bilateral donors, the diplomatic community, other relevant United Nations organizations and NGO partners. Moreover, for each operation, WFP will establish and chair a joint food security committee. The government and all interested partners will be invited to participate and exchange information on all issues pertaining to food aid, non-food related assistance, food security and nutrition relevant to that operation.

8.3 WFP and UNHCR will share with each other the project documents for assistance under the MOU before they are finalized. Letters of Understanding (LOUs) between WFP and the government will expressly provide for full access to and monitoring by both organizations of all aspects of the operation covered by the LOU. WFP will request UNHCR's association (as an observer or as otherwise agreed) with discussions pertinent to the LOU when it concerns people falling under UNHCR's mandate.

8.4 WFP and UNHCR will collaborate on public information activities to promote awareness of the food security and related non-food needs of beneficiaries, understanding of each organization's role, and support for the work of each organization in addressing these needs. In all joint operations, WFP and UNHCR will regularly acknowledge the role of the other to both the media and the general public in order to ensure the common goal of donor and host government support. At the field level, there should be adequate visibility for each organization.

8.5 At the Headquarters level, coordination on operation-specific matters is the responsibility of the respective operations managers or bureau directors. Joint field missions will be undertaken when warranted by specific situations. Coordination for commodity and resource mobilization issues is the responsibility of the respective resource mobilization services. Responsibility for coordinating overall policies and functional issues lies with the respective directors of UNHCR's Division of Operational Support and WFP's Operations Department, who will encourage direct contact among the technical, logistic and programme coordination staff concerned.

8.6 When either UNHCR or WFP is elaborating or developing emergency response capacities, systems and guidelines or taking any other action that could potentially benefit (or duplicate) the work of the other, the responsible unit in the other organization is to be informed. Furthermore, every effort should be made to maximize the benefits to both.

8.7. UNHCR and WFP will collaborate, as appropriate, on transport and logistics issues, at both the field and Headquarters level, to ensure coordination and best use of their assets and resources. Where possible, this will include regular information exchange, joint logistics planning, and use of common services and tools.

8.8. UNHCR and WFP will exchange information, collaborate and coordinate activities in regards to the safety and security of staff and beneficiaries. UNHCR and WFP will work together to enhance the United Nations Security Management System and, while doing so, promote an integrated approach to staff safety and security for the United Nations and NGO implementing partners.

8.9. UNHCR and WFP will collaborate, as appropriate, on telecommunications and information technology issues, at both the field and Headquarters level, to ensure coordination and best use of their assets and resources. Collaboration in the area of geographic information, such as Geographic Information Systems (GIS), Global Positioning System (GPS) and satellite imagery, will be strengthened to increase inter-agency collaboration and sharing of relevant data in standardized formats.

8.10. UNHCR and WFP will collaborate as appropriate in formulating and implementing joint policies and strategies aimed at promoting gender mainstreaming in all activities. The two agencies will make every attempt to implement joint operations in full respect of their common commitment to enhance the status and role of women. Task forces or gender theme groups at the field level would follow up on the strategies elaborated at Headquarters and would formulate joint action plans.

8.11 Each organization will develop and maintain its own training materials for discharging its responsibilities. Joint workshops will be organized, with priority given to the field. These workshops will focus on enhancing the skills and knowledge required for joint support to operations falling under this MOU. In addition, each organization will invite the other to participate in courses of a more general nature, such as emergency management training, nutrition and vulnerability assessment.

8.12 Joint Headquarters-level meetings with governments and other parties concerned in specific country or regional operations will be organized as required. If either UNHCR or WFP organizes a meeting with external bodies on operations covered by the MOU, the other organization will be invited.

8.13 Both agencies are committed to ensuring adherence by their staff and those of the partner organizations to their respective codes of conduct and/ or other internationally agreed-upon principles of accountability pertinent to humanitarian workers.

9. GENERAL PROVISIONS

9.1 This revised MOU shall come into effect on the date of its signing and supersedes the revised MOU dated March 1997.

9.2 It governs cooperation in all operations covered by its terms except those operations, or parts thereof, that may be specifically excluded by mutual agreement.

9.3 Should there be disagreement between the respective country offices on a course of action, the matter will be submitted to the corresponding regional bureaux of both organizations for resolution. If it is not possible to reach an agreement at the regional level, the matter will be referred to the Assistant Executive Director for Operations of WFP and to the Assistant High Commissioner of UNHCR for final resolution.

9.4 Whenever the timely supply of the agreed-upon food and related relief items and services to the jointly identified beneficiaries is delayed or totally disrupted, UNHCR and WFP will jointly investigate all possible remedial actions to be taken and the modalities for resourcing.

9.6 The MOU may be modified at any time by mutual written agreement.

(Signed)

James T. Morris
Executive Director
WFP

(Signed)

Ruud Lubbers
High Commissioner
UNHCR

Date: 9 July 2002

See also chapter 2 on protection, Annex 1 for a table of international instruments with their short and full titles. Chapter 16 on food and nutrition includes a glossary of technical terms used in that chapter.

Asylum seeker	An individual whose refugee status has not yet been determined.
Bureau	Organizational division at UNHCR Headquarters dealing with a particular region.
Children	All persons under the age of 18 (as defined in the Convention on the Rights of the Child).
Convention refugees	Persons determined to be refugees by the authorities of States that have acceded to the Convention and/or Protocol. As such, they are entitled to claim the rights and benefits which those States have undertaken to accord to refugees.
EXCOM	The Executive Committee of the High Commissioner's Programme which currently consists of representatives from 53 states elected on the widest possible geographic basis from those states with a demonstrated interest in and devotion to finding solutions for refugee problems.
Financial Rules	The "Financial Rules for Voluntary funds administered by the High Commissioner for Refugees" (document A/AC.96/503/Rev.7 of 7 October 1999).
Headquarters	UNHCR headquarters in Geneva.
Implementing agreement	Agreement between UNHCR and a partner which defines the conditions governing the implementation of a project.
Implementing partners	Operational partner that signs an implementing agreement and receives funding from UNHCR.
Internally displaced persons	See definition in chapter 2 on protection.
IOM/FOM	An Inter-Office Memorandum/Field Office Memorandum originating from Headquarters and containing management and other instructions.
Mandate refugees	Persons considered by UNHCR to be refugees according to the Statute and other relevant General Assembly resolutions. This determination is not dependent upon the state of asylum being party to the 1951 Convention or 1967 Protocol. Mandate refugees can benefit from the High Commissioner's action. They do not, however, benefit from the rights accorded to Convention refugees, unless they are also recognized as refugees by a State party to the Convention.
Non-governmental organization	A private voluntary agency created to perform beneficial activities according to its statutes or constitution.
Operational	This term is applied to the organization directly implementing an assistance project, e.g. UNHCR becomes operational when it provides assistance directly to refugees.
Operational partner	Governmental, inter-governmental and non-governmental organizations and UN agencies that work in partnership with UNHCR to protect and assist refugees, leading to the achievement of durable solutions.
Refugee	For convenience, the word refugee is used in this handbook to describe any person of concern to UNHCR. Chapter 2 on protection provides definitions of the different categories of persons of concern, including refugees, internally displaced persons and stateless people.
Representative	The High Commissioner's representative in the country where the emergency occurs (regardless of the representative's official title).
The Field	The area, outside Headquarters, where UNHCR provides protection and assistance to refugees and which contains UNHCR's Regional Offices, Branch Offices, Sub-Offices and Field Offices.
The Statute	The Statute of the Office of the United Nations High Commissioner for Refugees (General Assembly Resolution 428 (v) of 14 Dec. 1950). "Statutory" should be understood accordingly.
