

ACAP

S

What do we do, where, when and with whom?

ACAPS supports the humanitarian community's work on **severity and trends** by diving into the current situation of **more than 100 key crises around the globe**, while helping actors **anticipate and respond to emerging crises**.

ACAPS provides **high quality, independent and multi-sectoral analysis**. This enables crisis responders to better understand and consequently to better address the needs of the affected population, as well as strengthening the assessment and preparedness ecosystem.

Our team consists of about 30 professionals **based in Geneva and in the field**, reinforced by a pool of consultants. Currently ACAPS runs Analysis Hubs in [Amman, with a focus on the Yemen crisis](#), and in [Cox's Bazar, with a focus on the Rohingya crisis](#), from where we produce more granular analytical products.

The ACAPS team is in permanent contact with humanitarian workers at all levels, whether in the field or at head office. We are keen to listen to your concerns, feedback and requests, in order to improve our analysis tools.

Our partners:

What do we do, where, when and with whom?

3 main scopes of activities:

- ☐ Global humanitarian analysis (CrisisInSight)
- ☐ Tailored support / Field humanitarian analysis
- ☐ Capacity building and Forward Looking Analysis

CRISIS IN SIGHT

- Captures developments for sudden-onset disasters, protracted, and forgotten crises.
- Combines tools for understanding crises, by **assessing the level of severity, humanitarian access, risks and trends**. The correlation of these different sources of analysis makes it possible to envisage scenarios but also to reinforce preparedness.
- Provides an evidence-based foundation for decision makers and humanitarian actors and may help them improve principled operational response and a better allocation of resources.
- Daily monitoring and independent analysis of more than 150 countries.

Analysing access challenges

Humanitarian access overview

- Provides a snapshot of the most challenging contexts regarding humanitarian access. In this report we compare the level of humanitarian access between the previous update and the current situation.
- Our methodology groups **9 indicators under 3 dimensions**
- Each indicator is given a score from 0 to 3 and marked with an X when there is an information gap identified.
The overall access score by country is ranked according to the following scale:

0 - No constraints
1 - Low constraints
2 - Moderate constraints
3 - High constraints
4 - Very high constraints
5 – Extreme constraints

CRISISINSIGHT

HUMANITARIAN ACCESS OVERVIEW

May 2019

acaps 

Risks and trends

IDENTIFYING POTENTIAL FUTURE CHANGES: RISK

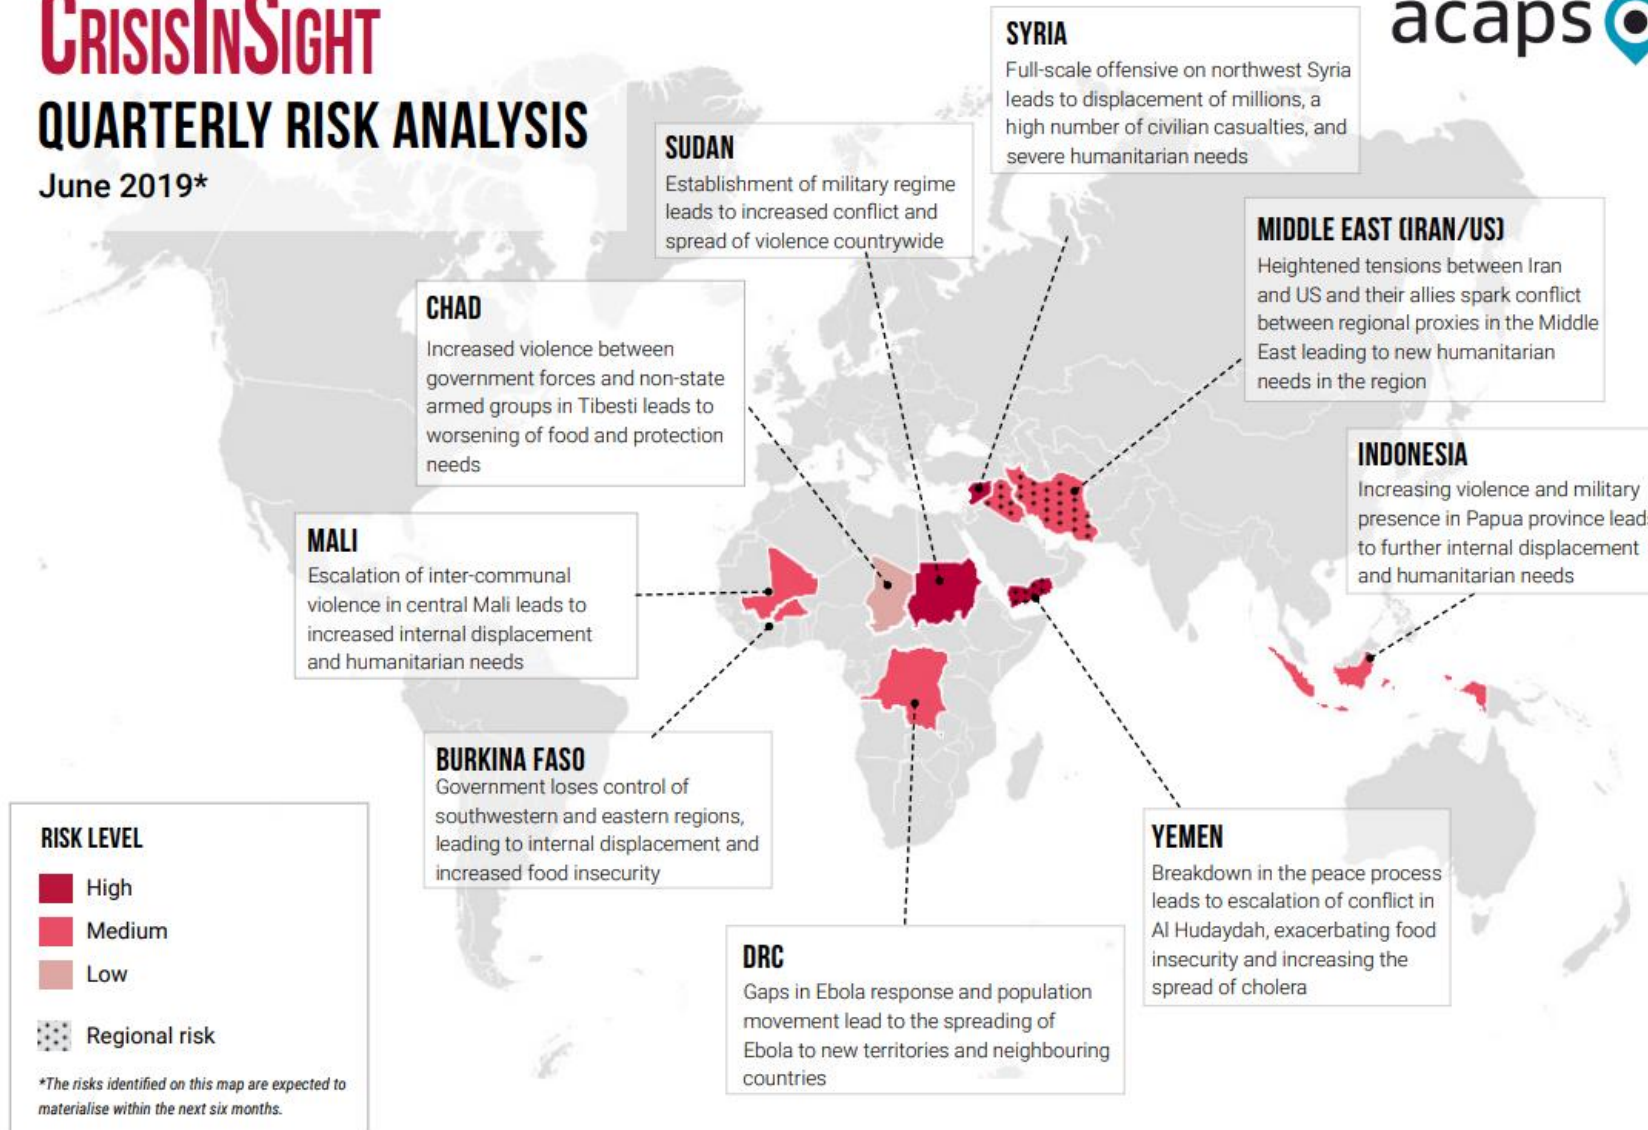

- The objective of ACAPS Quarterly risk analysis is to **enable humanitarian decision makers to understand potential future changes that would likely have humanitarian consequences**. By exposing the more probable developments and understanding their impact, they can be included in planning and preparedness which should improve response

CRISISINSIGHT

QUARTERLY RISK ANALYSIS

June 2019*

Trends report

Global Crisis Severity Index (GCSI) – April 2019

	Crisis	January	March	Severity	Context	Data
New crisis	Flooding AFGHANISTAN	-	3.0	Medium (with medium confidence)	↑	Above average snow- and rainfall linked to an El Niño phenomenon declared in February caused severe flooding across 14 of 34 provinces in March. More than 250,000 people were affected and at least 33,000 people are estimated to be in need of humanitarian assistance. Anticipated above average temperatures and dried out soil due to a severe drought in 2018 increase the risk of further flooding until May.
New crisis	Flooding BURUNDI	-	3.0	Medium (with low confidence)	↑	As Burundi entered the main rainy season (February – May), flooding was added as a separate crisis. Natural hazards such as flooding and strong winds are the main drivers of internal displacement and food insecurity in the country. Currently, 150,000 people have been reported as affected and around 8,000 people are considered to be in need of humanitarian assistance.
	Mixed migration LIBYA	3.8	3.1	High (with high confidence)	↓	The number of reported fatalities over the last six months decreased and reduced the overall severity score of this crisis by 0.7. The March score does no longer take into account July, August and September typically a time when more people attempt to cross the Mediterranean Sea to Europe.
New crisis	Tropical Cyclone Idai MALAWI	-	1.9	Low (with low confidence)	↑	Starting in early March 2019, Malawi experienced heavy rainfall and flooding associated with Cyclone Idai. Approximately 60 people were killed as a result of the flooding and 868,000 people were affected. More than 86,000 people remain displaced across affected districts in southern and central Malawi one month after the initial onset of the disaster.

Challenges...

We need that:

- Our products reach expected audience: Proactive communication, dissemination and partnerships with actors and information sharing platforms in the sector.
- There is a sufficient interest from humanitarian organizations in the need for objective and independent needs analysis.
- Stakeholders are willing to share sensitive data sources: ensure a “do no harm” approach. Specific information sharing and data protection protocols are implemented with partners acting in sensitive environments.
