The Emergency Tracking (ET) system is a crisis-based tool that aims at tracking sudden displacement or return movements triggered by specific crises through a standardized reporting matrix with real-time data turnover ranging from 24 to 72 hours following its activation. Deployed by the Task Force for Population Movement (TFPM) the ET provides best estimates, however, we do acknowledge its limitations. IOM and UNHCR under the framework of the TFPM will continue to work to further verify the displacement data within the two-month TFPM reporting cycle.
